Journal of Molecular Biology

Editor-in-Chief
P. Wright
Department of Molecular Biology, The Scripps Research Institute
10666 N. Torrey Pines Road, La Jolla, CA 92037, U.S.A.

Assistant Editor
J. Karn
MRC Laboratory of Molecular Biology
Hills Road, Cambridge CB2 2QH, U.K.

Founding Editor
Sir John Kendrew

Consulting Editor
Sydney Brenner

Editors
A. R. Fersht, University Chemical Laboratory, Cambridge University, Lensfield Road, Cambridge CB2 1EW, U.K.
M. Gottesman, Institute of Cancer Research, College of Physicians & Surgeons of Columbia University, 701 W. 168th Street, New York, NY 10032, U.S.A.
P. von Hippel, Institute of Molecular Biology, University of Oregon, Eugene, OR 97403–1229, U.S.A.
R. Huber, Max-Planck-Institut für Biochemie, 8033 Martinsried bei München, Germany.
A. Klug, MRC Laboratory of Molecular Biology, Hills Road, Cambridge CB2 2QH, U.K.
M. Yaniv, Department of Biotechnology, Pasteur Institute, 25 rue de Dr Roux, 75724 Paris Cedex 15, France.

Associate Editors
N.-H. Chua, The Rockefeller University, 1230 York Avenue, New York, NY 10021, U.S.A.
F. E. Cohen, Department of Pharmaceutical Chemistry, School of Pharmacy, University of California, San Francisco, CA 94143–0446, U.S.A.
D. J. DeRosier, Rosenstiel Basic Medical Sciences Research Center, Brandeis University, Waltham, MA 02254, U.S.A.
W. A. Hendrickson, Department of Biochemistry & Molecular Biophysics, College of Physicians & Surgeons of Columbia University, 630 West 168th Street, New York, NY 10032, U.S.A.
I.B. Holland, Institut de Génétique et Microbiologie, Bâtiment 409, Université de Paris XI, 91405 Orsay Cedex 05, France.
B. Honig, Department of Biochemistry & Molecular Biophysics, College of Physicians & Surgeons of Columbia University, 630 West 168th Street, New York, NY 10032, U.S.A.
H. E. Huxley, Rosenstiel Basic Medical Sciences Research Center, Brandeis University, Waltham, MA 02254, U.S.A.
V. Luzzati, Centre de Génétique Moléculaire, Centre National de la Recherche Scientifique, 91 Gif-sur-Yvette, France.
B. Matthews, Institute of Molecular Biology, University of Oregon, Eugene, OR 97403–1229, U.S.A.
J. H. Miller, Department of Microbiology, University of California, 405 Hilgard Avenue, Los Angeles, CA 90024, U.S.A.
M. F. Moody, School of Pharmacy, University of London, 29/39 Brunswick Square, London WC1N 1AX, U.K.
S. Reed, Department of Molecular Biology, The Scripps Research Institute, 10666 North Torrey Pines Road, La Jolla, CA 92037, U.S.A.
T. Richmond, Institut für Molekularbiologie und Biophysik, Eidgenössische Technische Hochschule, Hönggerberg, CH 8093 Zurich, Switzerland.
R. Schleif, Biology Department, Johns Hopkins University, Charles & 34th Streets, Baltimore, MD 21218, U.S.A.
N. L. Sternberg, Du Pont Merck Pharmaceutical Company, Cancer and Inflammatory Diseases, P.O. Box 80328, E 328/148 C, Wilmington, DE 19880–0328, U.S.A.
O. Uhlenbeck, Department of Chemistry & Biochemistry, University of Colorado, Boulder, Colorado 80309, U.S.A.
K. R. Yamamoto, Department of Biochemistry and Biophysics, School of Medicine, University of California, San Francisco, CA 94143–0448, U.S.A.
M. Yanagida, Department of Biophysics, Faculty of Science, Kyoto University, Sakyo-Ku, Kyoto 606, Japan.

Editorial Office
G. Harris, Journal of Molecular Biology, 10d St Edwards Passage, Cambridge CB2 3PJ, U.K.

JOURNAL OF MOLECULAR BIOLOGY: ISSN 0022–2836. Volumes 223–228, 1992, published twice a month on the 5th and 20th by Academic Press at 24–28 Oval Road, London NW1 7DX, England. Annual subscription price including postage: £924 U.K. and U.S.$1692 overseas. Personal subscription rate: £233 U.K. and U.S. $370 overseas. Subscription orders should be sent to Academic Press Limited, Foots Cray, Sidcup, Kent DA14 5HP, U.K. (Tel: 081–300 3322). Send notices of changes of address to the publisher at least 6–8 weeks in advance, including both old and new addresses.

Buyers in Canada should add GST at the current rate of 7%.

Second class postage rate paid at Jamaica, NY 11431, U.S.A.

Air freight and mailing in the U.S.A. by Publications Expediting Inc., 200 Meacham Avenue, Elmont, NY 11003, U.S.A.

U.S.A. POSTMASTERS: send change of addresses to JOURNAL OF MOLECULAR BIOLOGY, c/o Publications Expediting, Inc., 200 Meacham Avenue, Elmont, NY 11003, U.S.A.
Printed in U.K.

Number 1, 5 January 1991

Communications

A New Method for Building Protein Conformations from Sequence Alignments with Homologues of Known Structure	**T. F. Havel and M. E. Snow**	1–7
Crystals of an Integral Membrane Protein Diffracting to 1·8 Å Resolution	**A. Kreusch, M. S. Weiss, W. Welte, J. Weckesser and G. E. Schulz**	9–10
Crystallization and Preliminary X-ray Diffraction Studies of a MATα2–DNA Complex	**C. Wolberger, C. O. Pabo, A. K. Vershon and A. D. Johnson**	11–13
Preliminary Crystallographic Analysis of the ATP-hydrolysing Domain of the *Escherichia coli* DNA Gyrase B Protein	**A. P. Jackson, A. Maxwell and D. B. Wigley**	15–17
Many Crystal Forms of Human Immunodeficiency Virus Reverse Transcriptase	**L. F. Lloyd, P. Brick, L. Mei-Zhen, N. E. Chayen and D. M. Blow**	19–22

Articles

MRS3 and MRS4, Two Suppressors of mtRNA Splicing Defects in Yeast, are New Members of the Mitochondrial Carrier Family	**G. Wiesenberger, T. A. Link, U. von Ahsen, M. Waldherr and R. J. Schweyen**	23–37
Recognition of Unusual DNA Structures by Human DNA(cytosine-5)methyltransferase	**S. S. Smith, J. L. C. Kan, D. J. Baker, B. E. Kaplan and P. Dembek**	39–51
Drosophila Topoisomerase II–DNA Interactions are Affected by DNA Structure	**M. T. Howard, M. P. Lee, T.-s. Hsieh and J. D. Griffith**	53–62
Monomers of the *Escherichia coli* SSB-1 Mutant Protein Bind Single-stranded DNA	**W. Bujalowski and T. M. Lohman**	63–74
Differentiation-dependent Alteration in the Chromatin Structure of Chromosomal Protein HMG-17 Gene During Erythropoiesis	**M. P. Crippa, J. M. Nickol and M. Bustin**	75–84
Regulation of Histone $H1^0$ Accumulation During Induced Differentiation of Murine Erythroleukemia Cells	**D. Rousseau, S. Khochbin, C. Gorka and J.-J. Lawrence**	85–92
Structural Analysis of the Peptidyl Transferase Region in Ribosomal RNA of the Eukaryote *Xenopus laevis*	**B. Stebbins-Boaz and S. A. Gerbi**	93–112
Nuclear Magnetic Resonance Studies of the Hammerhead Ribozyme Domain. Secondary Structure Formation and Magnesium Ion Dependence	**H. A. Heus and A. Pardi**	113–124
Distinct Forms of the Protein Kinase-dependent Activator of Tyrosine and Tryptophan Hydroxylases	**T. Isobe, T. Ichimura, T. Sunaya, T. Okuyama, N. Takahashi, R. Kuwano and Y. Takahashi**	125–132
Structure, Function and Properties of Antibody Binding Sites	**I. S. Mian, A. R. Bradwell and A. J. Olson**	133–151
Crystal Structure of a Kunitz-type Trypsin Inhibitor from *Erythrina caffra* Seeds	**S. Onesti, P. Brick and D. M. Blow**	153–176
Structure of the *B*-DNA Decamer C-C-A-A-C-G-T-T-G-G and Comparison with Isomorphous Decamers C-C-A-A-G-A-T-T-G-G and C-C-A-G-G-C-C-T-G-G	**G. G. Privé, K. Yanagi and R. E. Dickerson**	177–199

Analysis of Local Helix Geometry in Three *B*-DNA Decamers and Eight Dodecamers — **K. Yanagi, G. G. Privé and R. E. Dickerson** — 201–214

Author Index — 215

Number 2, 20 January 1991

Communications

Molecular Analysis of Ultraviolet-induced Mutations in a Xeroderma Pigmentosum Cell Line — **G. Dorado, H. Steingrimsdottir, C. F. Arlett and A. R. Lehmann** — 217–222

Regulation of Filamentous Bacteriophage Length by Modification of Electrostatic Interactions Between Coat Protein and DNA — **J. Greenwood, G. J. Hunter and R. N. Perham** — 223–227

Identification of the Site Important for the Actin-activated MgATPase Activity of Myosin Subfragment-1 — **K. Yamamoto** — 229–233

Crystallization of Complexes of *Eco*RV Endonuclease with Cognate and Non-cognate DNA Fragments — **F. K. Winkler, A. D'Arcy, H. Blöcker, R. Frank and J. H. van Boom** — 235–238

Crystallization and Preliminary X-ray Diffraction Studies of Nucleoside Diphosphate Kinase from *Dictyostelium discoideum* — **C. Dumas, G. Lebras, V. Wallet, M.-L. Lacombe, M. Véron and J. Janin** — 239–240

Sub-domain Structure of Lipid-bound Annexin-V Resolved by Electron Image Analysis — **G. Mosser, C. Ravanat, J.-M. Freyssinet and A. Brisson** — 241–245

Articles

Identification of *Cis* and *Trans*-elements Involved in the Timed Control of a *Caulobacter* Flagellar Gene — **J. W. Gober, H. Xu, A. K. Dingwall and L. Shapiro** — 247–257

Mapping Using Unique Sequences — **D. C. Torney** — 259–264

Influences of Separation and Adjacent Sequences on the Use of Alternative 5′ Splice Sites — **S. A. Cunningham, A. J. Else, B. V. L. Potter and I. C. Eperon** — 265–281

Decay of mRNA Encoding Ribosomal Protein S15 of *Escherichia coli* Is Initiated by an RNase E-dependent Endonucleolytic Cleavage that Removes the 3′ Stabilizing Stem and Loop Structure — **P. Régnier and E. Hajnsdorf** — 283–292

Preparing Well-oriented Sols of Straight Bacterial Flagellar Filaments for X-ray Fiber Diffraction — **I. Yamashita, F. Vonderviszt, T. Noguchi and K. Namba** — 293–302

Allosteric Transition in Triply Met-Haemoglobin — **M. C. Marden, J. Kister, B. Bohn and C. Poyart** — 303–306

Assembly of *Octopus dofleini* Hemocyanin. A Study of the Kinetics by Sedimentation, Light Scattering and Electron Microscopy — **K. E. van Holde, K. Miller, E. Schabtach and L. Libertini** — 307–321

A Folded (10 S) Conformer of Myosin from a Striated Muscle and its Implications for Regulation of ATPase Activity — **R. J. Ankrett, A. J. Rowe, R. A. Cross, J. Kendrick-Jones and C. R. Bagshaw** — 323–335

Structure of Rubredoxin from *Desulfovibrio vulgaris* at 1·5 Å Resolution — **E. T. Adman, L. C. Sieker and L. H. Jensen** — 337–352

Refined Crystal Structures of Subtilisin Novo in Complex with Wild-type and Two Mutant Eglins. Comparison with Other Serine Proteinase Inhibitor Complexes — **D. W. Heinz, J. P. Priestle, J. Rahuel, K. S. Wilson and M. G. Grütter** — 353–371

Prediction of Protein Side-chain Conformation by Packing Optimization — C. Lee and S. Subbiah — 373–388

Is the Hydrophobic Effect Stabilizing or Destabilizing in Proteins? The Contribution of Disulphide Bonds to Protein Stability — A. J. Doig and D. H. Williams — 389–398

Author Index — 399

Number 3, 5 February 1991

Communications

Lithium Increases Actin Polymerization Rates by Enhancing the Nucleation Step — R. Colombo, A. Milzani and I. D. Donne — 401–404

Angular Disorder in Actin: Is It Consistent with General Principles of Protein Structure? — E. H. Egelman and D. J. DeRosier — 405–408

X-ray Crystal Structure of the Ferric Sperm Whale Myoglobin: Imidazole Complex at 2·0 Å Resolution — C. Lionetti, M. G. Guanziroli, F. Frigerio, P. Ascenzi and M. Bolognesi — 409–412

Articles

Computer Simulation of DNA Supercoiling — K. V. Klenin, A. V. Vologodskii, V. V. Anshelevich, A. M. Dykhne and M. D. Frank-Kamenetskii — 413–419

Construction, Expression and Release of Hybrid Colicins — M. Frenette, H. Benedetti, A. Bernadac, D. Baty and C. Lazdunski — 421–428

Individual Domains of Colicins Confer Specificity in Colicin Uptake, in Pore-properties and in Immunity Requirement — H. Benedetti, M. Frenette, D. Baty, M. Knibiehler, F. Pattus and C. Lazdunski — 429–439

Analysis of the Membrane Organization of an *Escherichia coli* Protein Translocator, HlyB, a Member of a Large Family of Prokaryote and Eukaryote Surface Transport Proteins — R. Wang, S. J. Seror, M. Blight, J. M. Pratt, J. K. Broome-Smith and I. B. Holland — 441–454

Human Rhinovirus 14 Complexed with Antiviral Compound R 61837 — M. S. Chapman, I. Minor, M. G. Rossmann, G. D. Diana and K. Andries — 455–463

Lysine 335, Part of the KMSKS Signature Sequence, Plays a Crucial Role in the Amino Acid Activation Catalysed by the Methionyl-tRNA Synthetase from *Escherichia coli* — Y. Mechulam, F. Dardel, D. Le Corre, S. Blanquet and G. Fayat — 465–475

Functional and Structural Effects of an Ala to Val Mutation in the Adenovirus Serotype 2 Fibre — M.-L. Caillet-Boudin, P. Lemay and P. Boulanger — 477–486

Three-dimensional Spatial Relationship between the Collagen Fibrils and the Inorganic Calcium Phosphate Crystals of Pickerel (*Americanus americanus*) and Herring (*Clupea harengus*) Bone — D. D. Lee and M. J. Glimcher — 487–501

Crystal Structures at 2·2 Å Resolution of the Catalytic Domains of Normal *ras* Protein and an Oncogenic Mutant Complexed with GDP — L. Tong, A. M. de Vos, M. V. Milburn and S.-H. Kim — 503–516

Efficient Computation of Three-dimensional Protein Structures in Solution from Nuclear Magnetic Resonance Data Using the Program DIANA and the Supporting Programs CALIBA, HABAS and GLOMSA — P. Güntert, W. Braun and K. Wüthrich — 517–530

Structure Determination of the *Antp(C39→S)* Homeodomain from Nuclear Magnetic Resonance Data in Solution using a Novel Strategy for the Structure Calculation with the Programs DIANA, CALIBA, HABAS and GLOMSA — **P. Güntert, Y. Q. Qian, G. Otting, M. Müller, W. Gehring and K. Wüthrich** — 531–540

The Refined Structure of the Complex between Adenylate Kinase from Beef Heart Mitochondrial Matrix and Its Substrate AMP at 1·85 Å Resolution — **K. Diederichs and G. E. Schulz** — 541–549

Analysis of Symmetry and Three-dimensional Reconstruction of Thin gp32*I Crystals — **R. A. Grant, M. F. Schmid and W. Chiu** — 551–562

Domain Structure and Interactions of the Type I and Type II Modules in the Gelatin-binding Region of Fibronectin. All Six Modules Are Independently Folded — **S. V. Litvinovich, D. K. Strickland, L. V. Medved' and K. C. Ingham** — 563–575

Isolation, Crystallization, Crystal Structure Analysis and Refinement of Constitutive C-phycocyanin from the Chromatically Adapting Cyanobacterium *Fremyella diplosiphon* at 1·66 Å Resolution — **M. Duerring, G. B. Schmidt and R. Huber** — 577–592

Author Index — 593–594

Number 4, 20 February 1991

Communications

Transcriptional Enhancer in the Vicinity of a Replication Origin within the 5′ Region of the Chicken α-Globin Gene Domain — **S. V. Razin, Y. S. Vassetzky Jr, A. I. Kvartskhava, N. F. Grinenko and G. P. Georgiev** — 595–598

Shared Operator Recognition Specificity between Trp Repressor and the Repressors of Bacteriophage 434 — **R. L. Somerville, G. Bogosian and J. H. Zeilstra-Ryalls** — 599–602

Putative 65 kDa Protein of Beet Yellows Closterovirus Is a Homologue of HSP70 Heat Shock Proteins — **A. A. Agranovsky, V. P. Boyko, A. V. Karasev, E. V. Koonin and V. V. Dolja** — 603–610

Comparison of the Solution Nuclear Magnetic Resonance and Crystal Structures of Interleukin-8. Possible Implications for the Mechanism of Receptor Binding — **G. M. Clore and A. M. Gronenborn** — 611–620

Crystallization and Preliminary Analysis of Telokin, the C-Terminal Domain of Myosin Light Chain Kinase — **T. A. Anderson, M. Ito, D. J. Hartshorne and I. Rayment** — 621–623

Co-crystals of Gramicidin A and Phospholipid. A System for Studying the Structure of a Transmembrane Channel — **B. A. Wallace and R. W. Janes** — 625–627

Articles

A Widely Distributed "CAT" Family of Repetitive DNA Sequences — **J. P. Martínez-Soriano, W. M. Wong, D. I. Van Ryk and R. N. Nazar** — 629–635

Sequence Changes in Both Flanking Sequences of a Pre-tRNA Influence the Cleavage Specificity of RNase P — **G. Krupp, D. Kahle, T. Vogt and S. Char** — 637–648

Higher-order Structure of the 5·8 S rRNA Sequence within the Yeast 35 S Precursor Ribosomal RNA Synthesized *in Vitro*	**L.-C. C. Yeh and J. C. Lee**	649–659
CAP and Nag Repressor Binding to the Regulatory Regions of the *nagE-B* and *manX* Genes of *Escherichia coli*	**J. Plumbridge and A. Kolb**	661–679
Circular Dichroism and Fluorescence Analysis of the Interaction of Pf1 Gene *5* Protein with Poly(dT)	**M. L. Carpenter and G. G. Kneale**	681–689
High-resolution Electron Crystallography of Light-harvesting Chlorophyll *a*/*b*-Protein Complex in Three Different Media	**D. N. Wang and W. Kühlbrandt**	691–699
Refined Crystal Structure of β-Lactamase from *Staphylococcus aureus* PC1 at 2·0 Å Resolution	**O. Herzberg**	701–719
Suggestions for "Safe" Residue Substitutions in Site-directed Mutagenesis	**D. Bordo and P. Argos**	721–729
Accurate Measurements of Coupling Constants from Two-dimensional Nuclear Magnetic Resonance Spectra of Proteins and Determination of ϕ-Angles	**S. Ludvigsen, K. V. Andersen and F. M. Poulsen**	731–736
Structure of Cyclodextrin Glycosyltransferase Refined at 2·0 Å Resolution	**C. Klein and G. E. Schulz**	737–750
Erratum		751–752
Author Index		753–754

List of Contents Volume 218

Number 1, 5 March 1991

Communications

Identification of a Subunit Assembly Domain in the Alpha Subunit of *Escherichia coli* RNA Polymerase	**K. Igarashi, N. Fujita and A. Ishihama**	1–6
Structures and Organization of Major Plasma Protein Genes of the Silkworm *Bombyx mori*	**S. Mori, S. Izumi and S. Tomino**	7–12
A Large Number of tRNA Genes Are Symmetrically Located in Fission Yeast Centromeres	**K. Takahashi, S. Murakami, Y. Chikashige, O. Niwa and M. Yanagida**	13–17
Preliminary Crystallographic Study of a Pseudoazurin from Methylotrophic Bacterium, *Methylobacterium extorquens* AMI	**T. Inoue, Y. Kai, S. Harada, N. Kasai, S. Suzuki, T. Kohzuma and J. Tobari**	19–20
Crystallization and Preliminary Crystallographic Study of Cathepsin D Inhibitor from Potatoes	**M. Baudyš, M. Ghosh, K. Harlos, M. Mareš, M. Fusek, V. Kostka and C. C. F. Blake**	21–22

Articles

In Vivo Analysis of Overlapping Transcription Units in the *rplKAJLrpoBC* Ribosomal Protein–RNA Polymerase Gene Cluster of *Escherichia coli*	**K. L. Steward and T. Linn**	23–31
Motif Recognition and Alignment for Many Sequences by Comparison of Dot-matrices	**M. Vingron and P. Argos**	33–43

AraC–DNA Looping: Orientation and Distance-dependent Loop Breaking by the Cyclic AMP Receptor Protein	**R. B. Lobell and R. F. Schleif**	45–54
Structure of the Core Promoter of Human and Mouse Ribosomal RNA Gene. Asymmetry of Species-specific Transcription	**Y. Ishikawa, G. Safrany, K. Hisatake, N. Tanaka, Y. Maeda, H. Kato, R. Kominami and M. Muramatsu**	55–67
Involvement of "Hinge" Nucleotides of *Xenopus laevis* 5 S rRNA in the RNA Structural Organization and in the Binding of Transcription Factor TFIIIA	**F. Baudin, P. J. Romaniuk, P. Romby, C. Brunel, E. Westhof, B. Ehresmann and C. Ehresmann**	69–81
Influence of mRNA Determinants on Translation Initiation in *Escherichia coli*	**D. Hartz, D. S. McPheeters and L. Gold**	83–97
Detection of *Escherichia coli* Ribosome Binding at Translation Initiation Sites in the Absence of tRNA	**D. Hartz, D. S. McPheeters, L. Green and L. Gold**	99–105
Tyr60 Variants of Flp Recombinase Generate Conformationally Altered Protein–DNA Complexes. Differential Activity in Full-site and Half-site Recombinations	**J.-W. Chen, B. R. Evans, L. Zheng and M. Jayaram**	107–118
Regulation of the F Plasmid *traY* Promoter in *Escherichia coli* by Host and Plasmid Factors	**P. M. Silverman, E. Wickersham and R. Harris**	119–128
Molecular and Functional Characterization of a Carbon Starvation Gene of *Escherichia coli*	**J. E. Schultz and A. Matin**	129–140
Carboxy-terminal Phenylalanine is Essential for the Correct Assembly of a Bacterial Outer Membrane Protein	**M. Struyvé, M. Moons and J. Tommassen**	141–148
Aggregation and Secondary Structure of Synthetic Amyloid βA4 Peptides of Alzheimer's Disease	**C. Hilbich, B. Kisters-Woike, J. Reed, C. L. Masters and K. Beyreuther**	149–163
Supramolecular Organization of Double-stranded DNA Molecules in the Columnar Hexagonal Liquid Crystalline Phase. An Electron Microscopic Analysis Using Freeze-fracture Methods	**F. Livolant**	165–181
Database Algorithm for Generating Protein Backbone and Side-chain Co-ordinates from a C^{α} Trace. Application to Model Building and Detection of Co-ordinate Errors	**L. Holm and C. Sander**	183–194
Comparison of the Crystal Structures of a Flavodoxin in its Three Oxidation States at Cryogenic Temperatures	**W. Watt, A. Tulinsky, R. P. Swenson and K. D. Watenpaugh**	195–208
Analysis of Structural Design Features in Collagen	**E. Y. Jones and A. Miller**	209–219
Proton Nuclear Magnetic Resonance Study of the B9(Asp)Mutant of Human Insulin. Sequential Assignment and Secondary Structure	**S. M. Kristensen, A. M. M. Jørgensen, J. J. Led, P. Balschmidt and F. B. Hansen**	221–231
Structural Mechanism for Glycogen Phosphorylase Control by Phosphorylation and AMP	**D. Barford, S.-H. Hu and L. N. Johnson**	233–260
Author Index		261

Number 2, 20 March 1991

Communications

Detection of Transmembrane Linkages between Immunoglobulin or Complement Receptors and the Neutrophil's Cortical Microfilaments by Resonance Energy Transfer Microscopy	**M.-J. Zhou, R. F. Todd III and H. R. Petty**	263–268

Crystallization and Preliminary X-ray Diffraction Studies of the Human Erythrocyte Bisphosphoglycerate Mutase	**J. Cherfils, R. Rosa, M.-C. Garel, M.-C. Calvin, J. Rosa and J. Janin**	269–270
Crystals of *Anabaena* PCC 7119 Ferredoxin-$NADP^+$ Reductase	**L. Serre, M. Medina, C. Gomez-Moreno, J. C. Fontecilla-Camps and M. Frey**	271–272

Articles

Structure and Inheritance of Sense and Anti-sense Transcripts from a Transposon in the Green Alga *Chlamydomonas reinhardtii*	**A. Day and J.-D. Rochaix**	273–291
Six Group I Introns and Three Internal Transcribed Spacers in the Chloroplast Large Subunit Ribosomal RNA Gene of the Green Alga *Chlamydomonas eugametos*	**M. Turmel, J. Boulanger, M. N. Schnare, M. W. Gray and C. Lemieux**	293–311
The Roles of Residues 5 and 9 of the Recognition Helix of Lac Repressor in *lac* Operator Binding	**J. Sartorius, N. Lehming, B. Kisters-Woike, B. von Wilcken-Bergmann and B. Müller-Hill**	313–321
Two MaIT Binding Sites in Direct Repeat. A Structural Motif Involved in the Activation of All the Promoters of the Maltose Regulons in *Escherichia coli* and *Klebsiella pneumoniae*	**D. Vidal-Ingigliardi, E. Richet and O. Raibaud**	323–334
Mutations in the Inverted Repeats of Tn*3* Affect Binding of Transposase and Transposition Immunity	**D. V. Nissley, F. Lindh and M. A. Fennewald**	335–347
DNA Sequence of the Filamentous Bacteriophage Pf1	**D. F. Hill, N. J. Short, R. N. Perham and G. B. Petersen**	349–364
The Signal For a Leaky UAG Stop Codon in Several Plant Viruses Includes the Two Downstream Codons	**J. M. Skuzeski, L. M. Nichols, R. F. Gesteland and J. F. Atkins**	365–373
rRNA Binding Domain of Yeast Ribosomal Protein L25. Identification of its Borders and a Key Leucine Residue	**C. A. Rutgers, J. M. J. Rientjes, J. van't Riet and H. A. Raué**	375–385
Anion and pH-dependent Conformational Transition of an Amphiphilic Polypeptide	**Y. Goto and S. Aimoto**	387–396
Influence of Proline Residues on Protein Conformation	**M. W. MacArthur and J. M. Thornton**	397–412
A Nuclear Magnetic Resonance Study of the Hydrogen-exchange Behaviour of Lysozyme in Crystals and Solution	**T. G. Pedersen, B. W. Sigurskjold, K. V. Andersen, M. Kjær, F. M. Poulsen, C. M. Dobson and C. Redfield**	413–426
X-ray Crystal Structure of the Two Site-specific Mutants His35Gln and His35Leu of Azurin from *Pseudomonas aeruginosa*	**H. Nar, A. Messerschmidt, R. Huber, M. van de Kamp and G. W. Canters**	427–447
Reaction Mechanism of Alkaline Phosphatase Based on Crystal Structures. Two-metal Ion Catalysis	**E. E. Kim and H. W. Wyckoff**	449–464
Aromatic–Aromatic Interactions and Protein Stability. Investigation by Double-mutant Cycles	**L. Serrano, M. Bycroft and A. R. Fersht**	465–475

Author Index 477

Number 3, 5 April 1991

Communications

Analysis of Polyomavirus Enhancer-Effect on DNA Replication and Early Gene Expression	**M. Nilsson, M. Österlund and G. Magnusson**	479–483
The Observed Form of Coated Vesicles and a Mathematical Covering Problem	**T. Tarnai**	485–488
Crystallization and Preliminary Characterization of Mitogillin, a Ribosomal Ribonuclease from *Aspergillus restrictus*	**S. E. Martinez and J. L. Smith**	489–492
Preliminary X-ray Crystallographic Analysis of a Modified Basic Fibroblast Growth Factor	**D. M. Bollag, A. P. Seddon, P. Böhlen, Y. Gluzman and C. E. Schutt**	493–494
Crystallization and Preliminary X-ray Analysis of Phenylalanine Hydroxylase from Rat Liver	**R. Celikel, M. D. Davis, X. Dai, S. Kaufman and N.-h. Xuong**	495–498
Proline Kinks in Transmembrane α-Helices	**G. von Heijne**	499–503

Communications

Kinetics of the Processing of the Precursor to 4·5 S RNA, a Naturally Occurring Substrate for RNase P from *Escherichia coli*	**K. A. Peck-Miller and S. Altman**	1–5
In a Staphylococcal Nuclease Mutant the Side-chain of a Lysine Replacing Valine 66 is Fully Buried in the Hydrophobic Core	**W. E. Stites, A. G. Gittis, E. E. Lattman and D. Shortle**	7–14
X-ray Structure of Human Relaxin at 1·5 Å. Comparison to Insulin and Implications for Receptor Binding Determinants	**C. Eigenbrot, M. Randal, C. Quan, J. Burnier, L. O'Connell, E. Rinderknecht and A. A. Kossiakoff**	15–21
Functional Specialization within the α-Subunit of *Escherichia coli* RNA Polymerase	**R. S. Hayward, K. Igarashi and A. Ishihama**	23–29
Crystallization and Preliminary X-ray Diffraction Study of the Ligand-binding Domain of the Bacterial Chemotaxis-mediating Aspartate Receptor of *Salmonella typhimurium*	**J. Jancarik, W. G. Scott, D. L. Milligan, D. E. Koshland Jr and S.-H. Kim**	31–34
Crystallization and Preliminary X-ray Data of Bromoperoxidase from *Streptomyces aureofaciens* ATCC 10762	**H. Sobek, T. Haag, O. Pfeifer, D. Schomburg, F. Lingens and K.-H. van Pée**	35–37
X-ray Solution Scattering of Sindbis Virus. Changes in Conformation Induced at Low pH	**M. J. Stubbs, A. Miller, P. J. H. Sizer, J. R. Stephenson and A. J. Crooks**	39–42

Crystallographic Analysis of the Neurophysin–Oxytocin Complex. A Preliminary Report	**J. P. Rose, E. Breslow, H.-b. Huang and B.-C. Wang**	43–45
Comparison of the Solution Nuclear Magnetic Resonance and X-ray Crystal Structures of Human Recombinant Interleukin-1β	**G. M. Clore and A. M. Gronenborn**	47–53
Low-resolution Structure of Recombinant Human Granulocyte–Macrophage Colony Stimulating Factor	**K. Diederichs, S. Jacques, T. Boone and P. A. Karplus**	55–60
New Crystal Form of Cytosolic Chicken Aspartate Aminotransferase Suitable for High-resolution X-ray Analysis	**V. N. Malashkevich and N. I. Sinitzina**	61–63

Articles

Translation Initiation of IS*50*R Read-through Transcripts	**V. P. Schulz and W. S. Reznikoff**	65–80
mRNA Degradation by Processive 3′–5′ Exoribonucleases *in Vitro* and the Implications for Prokaryotic mRNA Decay *in Vivo*	**R. S. McLaren, S. F. Newbury, G. S. C. Dance, H. C. Causton and C. F. Higgins**	81–95
Temperature-sensitive Variants of *Saccharomyces cerevisiae* Iso-1-cytochrome *c* Produced by Random Mutagenesis of Codons 43 to 54	**X. Wang and G. J. Pielak**	97–105
Torsionally Tuned Cruciform and *Z*-DNA Probes for Measuring Unrestrained Supercoiling at Specific Sites in DNA of Living Cells	**G. Zheng, T. Kochel, R. W. Hoepfner, S. E. Timmons and R. R. Sinden**	107–122
Appendix: Estimation of Superhelical Density *in vivo* from Analysis of the Level of Cruciforms Existing in Living Cells	**G. Zheng, D. W. Ussery and R. R. Sinden**	122–129
RecA-mediated Annealing of Single-stranded DNA and Its Relation to the Mechanism of Homologous Recombination	**B. Müller and A. Stasiak**	131–145
Effects of Base Mismatches on the Structure of the Four-way DNA Junction	**D. R. Duckett and D. M. J. Lilley**	147–161
Mutational Analysis of the Structure and Function of the Adenine Phosphoribosyltransferase Enzyme of Chinese Hamster	**J. G. de Boer and B. W. Glickman**	163–174
Genomic Structure of *Chlamydomonas* Caltractin. Evidence for Intron Insertion Suggests a Probable Genealogy for the EF-hand Superfamily of Proteins	**V. D. Lee, M. Stapleton and B. Huang**	175–191
Ribosomal RNA Identity Elements for Ricin A-chain Recognition and Catalysis	**Y. Endo, A. Glück and I. G. Wool**	193–207
Molecular Characterization of Cuticle and Interstitial Collagens from Worms Collected at Deep Sea Hydrothermal Vents	**F. Gaill, H. Wiedemann, K. Mann, K. Kühn, R. Timpl and J. Engel**	209–223
Identification and Functional Analysis of the Nuclear Localization Signals of Ribosomal Protein L25 from *Saccharomyces cerevisiae*	**P. J. Schaap, J. van't Riet, C. L. Woldringh and H. A. Raué**	225–237
2·9 Å Resolution Structure of an Anti-dinitrophenyl-spin-label Monoclonal Antibody Fab Fragment with Bound Hapten	**A. T. Brünger, D. J. Leahy, T. R. Hynes and R. O. Fox**	239–256
Structural and Kinetic Studies of the Fab Fragment of a Monoclonal Anti-spin Label Antibody by Nuclear Magnetic Resonance	**T. P. Theriault, D. J. Leahy, M. Levitt, H. M. McConnell and G. S. Rule**	257–270

Solution Structure of $[d(\dot{G}TATATAC)]_2$ *via* Restrained Molecular Dynamics Simulations with Nuclear Magnetic Resonance Constraints Derived from Relaxation Matrix Analysis of Two-dimensional Nuclear Overhauser Effect Experiments	**U. Schmitz, D. A. Pearlman and T. L. James**	271–292
Three-dimensional Model of *Escherichia coli* Ribosomal 5 S RNA as Deduced from Structure Probing in Solution and Computer Modeling	**C. Brunel, P. Romby, E. Westhof, C. Ehresmann and B. Ehresmann**	293–308
Refined Crystal Structure of the Complex of Subtilisin BPN′ and *Streptomyces* Subtilisin Inhibitor at 1·8 Å Resolution	**Y. Takeuchi, Y. Satow, K. T. Nakamura and Y. Mitsui**	309–325
Protein Docking and Complementarity	**B. K. Shoichet and I. D. Kuntz**	327–346
Two-dimensional and Epitaxial Crystallization of a Mutant Form of Yeast RNA Polymerase II	**S. A. Darst, E. W. Kubalek, A. M. Edwards and R. D. Kornberg**	347–357

Structure of Immunoglobulin G by Scanning Tunnelling Microscopy	**R. J. Leatherbarrow, M. Stedman and T. N. C. Wells**	361–365
Composite of A and F-type 5′ Terminal Sequences Defines a Subfamily of Mouse LINE-1 Elements	**N. B. Adey, S. A. Schichman, C. A. Hutchison III and M. H. Edgell**	367–373
Crystals of Intact Elongation Factor Tu from *Thermus thermophilus* Diffracting to High Resolution	**L. S. Reshetnikova, C. O. A. Reiser, N. K. Schirmer, H. Berchtold, R. Storm, R. Hilgenfeld and M. Sprinzl**	375–377
Crystallization and Preliminary X-ray Crystallographic Studies of Bovine Heart Mitochondrial Cytochrome bc_1 Complex	**T. Kubota, M. Kawamoto, K. Fukuyama, K. Shinzawa-Itoh, S. Yoshikawa and H. Matsubara**	379–382
Preliminary X-ray Diffraction Analysis of a Crystallizable Mutant of Malate Dehydrogenase from the Thermophile *Thermus flavus*	**C. A. Kelly, S. Sarfaty, M. Nishiyama, T. Beppu and J. J. Birktoft**	383–385

Articles

Novel Anticodon Composition of Transfer RNAs in *Micrococcus luteus*, a Bacterium with a High Genomic G+C Content. Correlation with Codon Usage	**A. Kano, Y. Andachi, T. Ohama and S. Osawa**	387–401
Suboptimal Sequence Alignment in Molecular Biology. Alignment with Error Analysis	**M. Zuker**	403–420
Novel Mutational Spectrum Induced by *N*-methyl-*N*′-nitro-*N*-nitrosoguanidine in the Coding Region of the Hypoxanthine (Guanine) Phosphoribosyltransferase Gene in Diploid Human Fibroblasts	**J.-L. Yang, M.-C. Hu and C.-W. Wu**	421–430
Mutations that Confer *de Novo* Activity upon a Maintenance Methyltransferase	**J. E. Kelleher, A. S. Daniel and N. E. Murray**	431–440

Spatial Organization of Template Polynucleotides on the Ribosome Determined by Fluorescence Methods	**A. V. Bakin, O. F. Borisova, I. N. Shatsky and A. A. Bogdanov**	441–453
Biochemical Implications from the Variable Gene Sequences of an Anti-cytochrome *c* Antibody and Crystallographic Characterization of its Antigen-binding Fragment in Free and Antigen-complexed Forms	**S. E. Mylvaganam, Y. Paterson, K. Kaiser, K. Bowdish and E. D. Getzoff**	455–462
Efficient Templates for Qβ Replicase are Formed by Recombination from Heterologous Sequences	**A. V. Munishkin, L. A. Voronin, V. I. Ugarov, L. A. Bondareva, H. V. Chetverina and A. B. Chetverin**	463–472
Three-dimensional Structure of the Neuraminidase of Influenza Virus A/Tokyo/3/67 at 2·2 Å Resolution	**J. N. Varghese and P. M. Colman**	473–486
Refined Atomic Structures of N9 Subtype Influenza Virus Neuraminidase and Escape Mutants	**W. R. Tulip, J. N. Varghese, A. T. Baker, A. van Donkelaar, W. G. Laver, R. G. Webster and P. M. Colman**	487–497
Dynamic Monte Carlo Simulations of a New Lattice Model of Globular Protein Folding, Structure and Dynamics	**J. Skolnick and A. Kolinski**	499–531
High-resolution Solution Structure of Reduced French Bean Plastocyanin and Comparison with the Crystal Structure of Poplar Plastocyanin	**J. M. Moore, C. A. Lepre, G. P. Gippert, W. J. Chazin, D. A. Case and P. E. Wright**	533–555
Secondary Structure of Coliphage Qβ RNA. Analysis by Electron Microscopy	**A. B. Jacobson**	557–570
Crystal Structure of Human α-Lactalbumin at 1·7 Å Resolution	**K. R. Acharya, J. Ren, D. I. Stuart, D. C. Phillips and R. E. Fenna**	571–581
Refined Structure of the Hirudin–Thrombin Complex	**T. J. Rydel, A. Tulinsky, W. Bode and R. Huber**	583–601
β-Breakers: An Aperiodic Secondary Structure	**N. Culloc'h and F. E. Cohen**	603–613
Serpin Tertiary Structure Transformation	**P. Stein and C. Chothia**	615–621
Molecular Structure of a Complete Turn of *A*-DNA	**N. Verdaguer, J. Aymami, D. Fernández-Forner, I. Fita, M. Coll, T. Huynh-Dinh, J. Igolen and J. A. Subirana**	623–635
Correlation of Metal Decoration and Topochemistry on Protein Surfaces	**S. Weinkauf, A. Bacher, W. Baumeister, R. Ladenstein, R. Huber and L. Bachmann**	637–645
Structural and Thermodynamic Analysis of the Packing of Two α-Helices in Bacteriophage T4 Lysozyme	**S. Daopin, T. Alber, W. A. Baase, J. A. Wozniak and B. W. Matthews**	647–667
Analysis of Protein Main-chain Solvation as a Function of Secondary Structure	**N. Thanki, Y. Umrania, J. M. Thornton and J. M. Goodfellow**	669–691
Physical Studies of Tyrosine and Tryptophan Residues in Mammalian A1 Heterogeneous Nuclear Ribonucleoprotein. Support for a Segmented Structure	**J. R. Casas-Finet, R. L. Karpel, A. H. Maki, A. Kumar and S. H. Wilson**	693–709
Crystallographic Analysis of Acrosomal Bundle from *Limulus* Sperm	**M. F. Schmid, P. Matsudaira, T.-W. Jeng, J. Jakana, E. Towns-Andrews, J. Bordas and W. Chiu**	711–725
Author Index		727–728

Communications

Secondary Structure as a Constraint on the Evolution of a Plant Viral Satellite RNA	**A. Fraile and F. García-Arenal**	1065–1069
Crystallization and Preliminary X-ray Investigation of a Sarcoplasmic Calcium-binding Protein from Amphioxus	**W. J. Cook, Y. S. Babu and J. A. Cox**	1071–1073
Crystallization and Crystal Packing of *Proteus mirabilis* PR Catalase	**H.-M. Jouve, P. Gouet, N. Boudjada, G. Buisson, R. Kahn and E. Duee**	1075–1077
Crystallization of the IIA Domain of the Glucose Permease of *Bacillus subtilis*	**G. Kapadia, C. C. H. Chen, P. Reddy, M. H. Saier, Jr, J. Reizer and O. Herzberg**	1079–1080
Secondary Structure of the Ribonuclease H Domain of the Human Immunodeficiency Virus Reverse Transcriptase in Solution using Three-dimensional Double and Triple Resonance Heteronuclear Magnetic Resonance Spectroscopy	**R. Powers, G. M. Clore, A. Bax, D. S. Garrett, S. J. Stahl, P. T. Wingfield and A. M. Gronenborn**	1081–1090

Articles

Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. I. Characterization of Elongation Complexes	**S. S. Sastry and J. E. Hearst**	1091–1110
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. II. Stability and Some Properties of Elongation Complexes	**S. S. Sastry and J. E. Hearst**	1111–1125
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interaction with RNA. I. Cryoelectron Microscopic Studies	**E. P. Gogol, S. E. Seifried and P. H. von Hippel**	1127–1138
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interactions with RNA. II. Physical Chemical Studies	**S. E. Seifried, K. P. Bjornson and P. H. von Hippel**	1139–1151
Function of P11, a Tertiary Base Pairing in Self-splicing Introns of Subgroup 1A	**L. Jaeger, E. Westhof and F. Michel**	1153–1164
DNA-induced Dimerization of the *Escherichia coli* Rep Helicase	**K. Chao and T. M. Lohman**	1165–1181
The *Staphylococcus aureus* Mutation *pcrA3* Leads to the Accumulation of pT181 Replication Initiation Complexes	**S. Iordanescu and R. Basheer**	1183–1189
Model for the Interaction of DNA Junctions and Resolving Enzymes	**A. Bhattacharyya, A. I. H. Murchie, E. von Kitzing, S. Diekmann, B. Kemper and D. M. J. Lilley**	1191–1207
rDNA Intergenic Region from *Arabidopsis thaliana*. Structural Analysis, Intraspecific Variation and Functional Implications	**P. Gruendler, I. Unfried, K. Pascher and D. Schweizer**	1209–1222
Mitochondrial D-loop Sequences are Integrated in the Rat Nuclear Genome	**S. Zullo, L. C. Sieu, J. L. Slightom, H. I. Hadler and J. M. Eisenstadt**	1223–1235
Sporulation Operon *spoIVF* and the Characterization of Mutations that Uncouple Mother-cell from Forespore Gene Expression in *Bacillus subtilis*	**S. Cutting, S. Roels and R. Losick**	1237–1256
Recognition of the Highly Conserved GTPase Center of 23 S Ribosomal RNA by Ribosomal Protein L11 and the Antibiotic Thiostrepton	**P. C. Ryan, M. Lu and D. E. Draper**	1257–1268
Refined Crystal Structure of Cd,Zn Metallothionein at 2·0 Å Resolution	**A. H. Robbins, D. E. McRee, M. Williamson, S. A. Collett, N. H. Xuong, W. F. Furey, B. C. Wang and C. D. Stout**	1269–1293
X-ray Analyses of Aspartic Proteinases IV. Structure and Refinement at 2·2 Å Resolution of Bovine Chymosin	**M. Newman, M. Safro, C. Frazao, G. Khan, A. Zdanov, I. J. Tickle, T. L. Blundell and N. Andreeva**	1295–1309
Sequence-specific ^{1}H n.m.r. Assignments and Determination of the Three-dimensional Structure of Reduced *Escherichia coli* Glutaredoxin	**P. Sodano, T.-h. Xia, J. H. Bushweller, O. Björnberg, A. Holmgren, M. Billeter and K. Wüthrich**	1311–1324
Structure of NADH Peroxidase from *Streptococcus faecalis* 10C1 Refined at 2·16 Å Resolution	**T. Stehle, S. A. Ahmed, A. Claiborne and G. E. Schulz**	1325–1344

Solution Structure of Human and Mouse Immunoglobulin M by Synchroton X-ray Scattering and Molecular Graphics Modelling. A Possible Mechanism for Complement Activation	**S. J. Perkins, A. S. Nealis, B. J. Sutton and A. Feinstein**	1345–1366
An Efficient Algorithm for Identifying Matches with Errors in Multiple Long Molecular Sequences	**M.-Y. Leung, B. E. Blaisdell, C. Burge and S. Karlin**	1367–1378
Structure of the Hirugen and Hirulog 1 Complexes of α-Thrombin	**E. Skrzypczak-Jankun, V. E. Carperos, K. G. Ravichandran, A. Tulinsky, M. Westbrook and J. M. Maraganore**	1379–1393
Position Effect on Apparent Helical Propensities in the C-peptide Helix	**R. Fairman, K. M. Armstrong, K. R. Shoemaker, E. J. York, J. M. Stewart and R. L. Baldwin**	1395–1401
Nuclear Magnetic Resonance Structural Studies of Intramolecular Purine·Purine·Pyrimidine DNA Triplexes in Solution. Base Triple Pairing Alignments and Strand Direction	**I. Radhakrishnan, C. de los Santos and D. J. Patel**	1403–1418
Parallel and Antiparallel Holliday Junctions Differ in Structure and Stability	**M. Lu, Q. Guo, N. C. Seeman and N. R. Kallenbach**	1419–1432
Mutations in the MotA Protein of *Escherichia coli* Reveal Domains Critical for Proton Conduction	**D. F. Blair and H. C. Berg**	1433–1442
Influence of Site-directed Modifications on the Formation of Iron Cores in Ferritin	**V. J. Wade, S. Levi, P. Arosio, A. Treffry, P. M. Harrison and S. Mann**	1443–1452
Mapping Electrostatic Interactions in Macromolecular Associations	**K. K. Rodgers and S. G. Sligar**	1453–1460
Role of the Disordered Terminal Regions of Flagellin in Filament Formation and Stability	**F. Vonderviszt, S.-I. Aizawa and K. Namba**	1461–1474
Author Index		1475–1477

List of Contents Volume 222

Number 1, 5 November 1991

Communications

Preliminary X-ray Investigation of a Bifunctional Inhibitor from Indian Finger Millet (Ragi)	**A. Srinivasan, A. Raman and T. P. Singh**	1–2
On the Nature of Spontaneous RNA Synthesis by Qβ Replicase	**A. B. Chetverin, H. V. Chetverina and A. V. Munishkin**	3–9
Characterization and Preliminary Attempts for Derivatization of Crystals of Large Ribosomal Subunits from *Haloarcula marismortui* Diffracting to 3 Å Resolution	**K. von Böhlen, I. Makowski, H. A. S. Hansen, H. Bartels, Z. Berkovitch-Yellin, A. Zaytzev-Bashan, S. Meyer, C. Paulke, F. Franceschi and A. Yonath**	11–15
Characterization of Crystals of an Intact Monoclonal Antibody for Canine Lymphoma	**S. Larson, J. Day, A. Greenwood, E. Skaletsky and A. McPherson**	17–19
Preliminary Investigation of Crystals of the Neutral Lipase from *Pseudomonas fluorescens*	**S. Larson, J. Day, A. Greenwood, J. Oliver, D. Rubingh and A. McPherson**	21–22

Crystals of a Bovine Neurophysin II Tripeptide Complex — **E. Benatan, J. Rose, E. Breslow and B.-C. Wang** — 23–25

Crystallization and Preliminary Crystallographic Analysis of a Novel Nuclease from *Serratia marcescens* — **M. D. Miller, M. J. Benedik, M. C. Sullivan, N. S. Shipley and K. L. Krause** — 27–30

Articles

NFY or a Related CCAAT Binding Factor Can Be Replaced by Other Transcriptional Activators for Co-operation with HNF1 in Driving the Rat Albumin Promoter *in Vivo* — **F. Tronche, A. Rollier, D. Sourdive, S. Cereghini and M. Yaniv** — 31–43

Conserved Chromatin Structure in c-*myc* 5′-Flanking DNA after Viral Transduction — **S. Kumar and M. Leffak** — 45–57

Specificity of Antitermination Mechanisms. Suppression of the Terminator Cluster T1-T2 of *Escherichia coli* Ribosomal RNA Operon, *rrnB*, by Phage λ Antiterminators — **B. Ghosh, E. Grzadzielska, P. Bhattacharya, E. Peralta, J. DeVito and A. Das** — 59–66

Systematic Mutation of Bacteriophage T4 Lysozyme — **D. Rennell, S. E. Bouvier, L. W. Hardy and A. R. Poteete** — 67–88

Fibrinogen Structure in Projection at 18 Å Resolution. Electron Density by Co-ordinated Cyro-electron Microscopy and X-ray Crystallography — **S. P. S. Rao, M. D. Poojary, B. W. Elliott, Jr, L. A. Melanson, B. Oriel and C. Cohen** — 89–98

Amino Acid Substrate Specificity of *Escherichia coli* Phenylalanyl-tRNA Synthetase Altered by Distinct Mutations — **P. Kast and H. Hennecke** — 99–124

Author Index — 125

Number 2, 20 November 1991

Communications

Initiation of Bacteriophage PRD1 DNA Replication on Single-stranded Templates — **S.-K. Yoo and J. Ito** — 127–131

Topoisomer Heterogeneity of Plasmid Chromatin in Living Cells — **R. H. Morse** — 133–137

Expression of the Protease Inhibitor Ecotin and Its Co-crystallization with Trypsin — **M. E. McGrath, T. Erpel, M. F. Browner and R. J. Fletterick** — 139–142

Crystallization and Preliminary Crystallographic Study of Glucose Dehydrogenase from the Archaebacterium *Thermoplasma acidophilum* — **J. R. Bright, R. Mackness, M. J. Danson, D. W. Hough, G. L. Taylor, P. Towner and D. Byrom** — 143–144

Articles

Fate of the Junction Phosphate in Alternating Forward and Reverse Self-splicing Reactions of Group II Intron RNA — **M. W. Müller, P. Stocker, M. Hetzer and R. J. Schweyen** — 145–154

Co-operative Binding of the Glucocorticoid Receptor DNA Binding Domain is One of at Least Two Mechanisms for Synergism — **C. Baniahmad, M. Muller, J. Altschmied and R. Renkawitz** — 155–165

DNA–Drug Interactions. The Crystal Structures of d(TGTACA) and d(TGATCA) Complexed with Daunomycin	**C. M. Nunn, L. Van Meervelt, S. Zhang, M. H. Moore and O. Kennard**	167–177
Restoration of the Self-splicing Activity of a Defective Group II Intron by a Small *Trans*-acting RNA	**M. Suchy and C. Schmelzer**	179–187
An *Escherichia coli rpoB* Mutation that Inhibits Transcription of Catabolite-sensitive Operons	**P. Rockwell and M. E. Gottesman**	189–196
Normal *terC*-Region of the *Bacillus subtilis* Chromosome Acts in a Polar Manner to Arrest the Clockwise Replication Fork	**C. M. Carrigan, R. A. Pack, M. T. Smith and R. G. Wake**	197–207
Characterization of the *POL3* Gene Product from *Schizosaccharomyces pombe* Indicates Inter-species Conservation of the Catalytic Subunit of DNA Polymerase δ	**G. Pignède, D. Bouvier, A.-M. de Recondo and G. Baldacci**	209–218
Spliceosomal Small Nuclear RNAs of *Tetrahymena thermophila* and Some Possible snRNA–snRNA Base-pairing Interactions	**H. Ørum, H. Nielsen and J. Engberg**	219–232
Sequence and Comparative Analysis of the Rabbit α-Like Globin Gene Cluster Reveals a Rapid Mode of Evolution in a G+C-rich Region of Mammalian Genomes	**R. Hardison, D. Krane, D. Vandenbergh, J.-F. Cheng, J. Mansberger, J. Taddie, S. Schwartz, X. Huang and W. Miller**	233–249
Attachment Sites of Primary Binding Proteins L1, L2 and L23 on 23 S Ribosomal RNA of *Escherichia coli*	**J. Egebjerg, J. Christiansen and R. A. Garrett**	251–264
Absolute *in Vivo* Translation Rates of Individual Codons in *Escherichia coli*. The Two Glutamic Acid Codons GAA and GAG Are Translated with a Threefold Difference in Rate	**M. A. Sørensen and S. Pedersen**	265–280
Characterization of the Cytoplasm of *Escherichia coli* K-12 as a Function of External Osmolarity. Implications for Protein–DNA Interactions *in Vivo*	**S. Cayley, B. A. Lewis, H. J. Guttman and M. T. Record Jr**	281–300
Selection of Antibody Ligands from a Large Library of Oligopeptides Expressed on a Multivalent Exposition Vector	**F. Felici, L. Castagnoli, A. Musacchio, R. Jappelli and G. Cesareni**	301–310
Relationship between Nuclear Magnetic Resonance Chemical Shift and Protein Secondary Structure	**D. S. Wishart, B. D. Sykes and F. M. Richards**	311–333
Ribonuclease T_1 with Free Recognition and Catalytic Site: Crystal Structure Analysis at 1·5 Å Resolution	**J. Martinez-Oyanedel, H.-W. Choe, U. Heinemann and W. Saenger**	335–352
(14–38, 30–51) Double-disulphide Intermediate in Folding of Bovine Pancreatic Trypsin Inhibitor: A Two-dimensional ^{1}H Nuclear Magnetic Resonance Study	**C. P. M. van Mierlo, N. J. Darby, D. Neuhaus and T. E. Creighton**	353–371
Two-dimensional ^{1}H Nuclear Magnetic Resonance Study of the (5–55) Single-disulphide Folding Intermediate of Bovine Pancreatic Trypsin Inhibitor	**C. P. M. van Mierlo, N. J. Darby, D. Neuhaus and T. E. Creighton**	373–390
Characterization of a Tandemly Repeated DNA Sequence Family Originally Derived by Retroposition of $tRNA^{Glu}$ in the Newt	**S. Nagahashi, H. Endoh, Y. Suzuki and N. Okada**	391–404

Interaction of Troponin I and Troponin C. Use of the Two-dimensional Nuclear Magnetic Resonance Transferred Nuclear Overhauser Effect to Determine the Structure of the Inhibitory Troponin I Peptide when Bound to Skeletal Troponin C — **A. P. Campbell and B. D. Sykes** — 405–421

Nature of Protamine–DNA Complexes. A Special Type of Ligand Binding Co-operativity — **D. Porschke** — 423–433

Author Index — 435

Number 3, 5 December 1991

Communications

Interactions between Viral Coat Protein and a Specific Binding Region on Turnip Crinkle Virus RNA — **N. Wei and T. J. Morris** — 437–443

Characterization of Crystals of An Fab Fragment of a Murine Monoclonal Antibody — **N. Ban, C. Escobar, J. Day, A. Greenwood, S. Larson and A. McPherson** — 445–446

Crystallization and Preliminary Data for the Ferric Form of *Lucina pectinata* Hemoglobin I — **E. Casale, C. Lionetti, A. Coda, A. Merli, P. Ascenzi, J. B. Wittenberg and M. Bolognesi** — 447–449

Purification, Crystallization and Preliminary X-ray Diffraction Studies on the *Pvu*II Endonuclease — **A. Athanasiadis and M. Kokkinidis** — 451–453

Scanning Transmission Electron Microscopic Mass Determination of *in Vitro* Self-assembled Smooth Muscle Myosin Filaments — **R. A. Cross and A. Engel** — 455–458

Crystallization and Preliminary X-ray Diffraction Studies of the Spinach-chloroplast Thioredoxin f — **J.-C. Génovésio-Taverne, Y. Jetzer, U. Sauder, E. Hohenester, C. Hughet, J. N. Jansonius, L. Gardet-Salvi and P. Schürmann** — 459–461

Crystallization of a Complex of Hemoglobin Components II and III of the Symbiont-harboring Clam *Lucina pectinata* — **N. Kemling, D. W. Kraus, J. D. Hockenhull-Johnson, J. B. Wittenberg, S. B. Vinogradov, D. A. Walz, B. F. P. Edwards and P. Martin** — 463–464

Articles

Programmed Translational Frameshifting and Initiation at an AUU Codon in Gene Expression of Bacterial Insertion Sequence IS*911* — **P. Polard, M. F. Prère, M. Chandler and O. Fayet** — 465–477

RNA Polymerase Bound to the P_R Promoter of Bacteriophage λ Inhibits Open Complex Formation at the Divergently Transcribed P_{RM} Promoter. Implications for an Indirect Mechanism of Transcriptional Activation by λ Repressor — **P. A. Hershberger and P. L. deHaseth** — 479–494

Control Regions of an Archaeal Gene. A TATA Box and an Initiator Element Promote Cell-free Transcription of the $tRNA^{Val}$ Gene of *Methanococcus vannielii* — **W. Hausner, G. Frey and M. Thomm** — 495–508

Detailed Physical Map and Set of Overlapping Clones Covering the Genome of the Archaebacterium *Haloferax volcanii* DS2	**R. L. Charlebois, L. C. Schalkwyk, J. D. Hofman and W. F. Doolittle**	509–524
Mitochondrial-like DNA Sequences Flanked by Direct and Inverted Repeats in the Nuclear Genome of *Toxoplasma gondii*	**P. N. Ossorio, L. D. Sibley and J. C. Boothroyd**	525–536
Transfer RNA Genes from *Dictyostelium discoideum* are Frequently Associated with Repetitive Elements and Contain Consensus Boxes in their 5′ and 3′-Flanking Regions	**J. Hofmann, G. Schumann, G. Borschet, R. Gösseringer, M. Bach, W. M. Bertling, R. Marschalek and T. Dingermann**	537–552
Characterization of the Memory Gene Dunce of *Drosophila melanogaster*	**Y. Qui, C.-N. Chen, T. Malone, L. Richter, S. K. Beckendorf and R. L. Davis**	553–565
EnvZ Controls the Concentration of Phosphorylated OmpR to Mediate Osmoregulation of the Porin Genes	**F. D. Russo and T. J. Silhavy**	567–580
By-passing Immunization. Human Antibodies from V-gene Libraries Displayed on Phage	**J. D. Marks, H. R. Hoogenboom, T. P. Bonnert, J. McCafferty, A. D. Griffiths and G. Winter**	581–597
Estimation of Macromolecule Concentrations and Excluded Volume Effects for the Cytoplasm of *Escherichia coli*	**S. B. Zimmerman and S. O. Trach**	599–620
Refinement of the Three-dimensional Solution Structure of Barley Serine Proteinase Inhibitor 2 and Comparison with the Structures in Crystals	**S. Ludvigsen, H. Shen, M. Kjær, J. Chr. Madsen and F. M. Poulsen**	621–635
Mini-myoglobin. Electron Paramagnetic Resonance and Reversible Oxygenation of the Cobalt Derivative	**G. De Sanctis, G. Falcioni, F. Grelloni, A. Desideri, F. Polizio, B. Giardina, F. Ascoli and M. Brunori**	637–643
DNase I-induced DNA Conformation. 2 Å Structure of a DNase I–Octamer Complex	**A. Lahm and D. Suck**	645–667
New Technique for Uncoupling the Cleavage and Religation Reactions of Eukaryotic Topoisomerase I. The Mode of Action of Camptothecin at a Specific Recognition Site	**J. Q. Svejstrup, K. Christiansen, I. I. Gromova, A. H. Andersen and O. Westergaard**	669–678
Role of Electrostatic Repulsion in the Acidic Molten Globule of Cytochrome *c*	**Y. Goto and S. Nishikiori**	679–686
Molecular Basis of Co-operativity in Protein Folding	**E. Freire and K. P. Murphy**	687–698
Solid Model Compounds and the Thermodynamics of Protein Unfolding	**K. P. Murphy and S. J. Gill**	699–709
Molecular Basis for Methoxyamine Initiated Mutagenesis. ^{1}H Nuclear Magnetic Resonance Studies of Base-modified Oligodeoxynucleotides	**M. J. Stone, A. N. R. Nedderman, D. H. Williams, P. K. T. Lin and D. M. Brown**	711–723
Three-dimensional Structure of a Highly Thermostable Enzyme, 3-Isopropylmalate Dehydrogenase of *Thermus thermophilus* at 2·2 Å Resolution	**K. Imada, M. Sato, N. Tanaka, Y. Katsube, Y. Matsuura and T. Oshima**	725–738
SELEXION. Systematic Evolution of Ligands by Exponential Enrichment with Integrated Optimization by Non-linear Analysis	**D. Irvine, C. Tuerk and L. Gold**	739–761
Construction of New Ligand Binding Sites in Proteins of Known Structure. I. Computer-aided Modeling of Sites with Pre-defined Geometry	**H. W. Hellinga and F. M. Richards**	763–785

Construction of New Ligand Binding Sites in Proteins of Known Structure. II. Grafting of a Buried Transition Metal Binding Site into *Escherichia coli* Thioredoxin	**H. W. Hellinga, J. P. Caradonna and F. M. Richards**	787–803
A Simplified Mechanical Model of Proteins Tested on the Globin Fold	**D. J. Thomas**	805–817
Multinuclear Nuclear Magnetic Resonance Studies of Na Cation-stabilized Complex Formed by d(G-G-T-T-T-T-C-G-G) in Solution. Implications for G-tetrad Structures	**Y. Wang, C. de los Santos, X. Gao, K. Greene, D. Live and D. J. Patel**	819–832
Author Index		833–834

Number 4, 20 December 1991

Communications

Cysteine Residue Periodicity is a Conserved Structural Feature of Variable Surface Proteins from *Paramecium tetraurelia*	**E. Nielsen, Y. You and J. Forney**	835–841
Escherichia coli Transcription Factor That Both Activates Fatty Acid Synthesis and Represses Fatty Acid Degradation	**M. F. Henry and J. E. Cronan, Jr**	843–849
Evidence for Horizontal Gene Transfer in *Escherichia coli* Speciation	**C. Médigue, T. Rouxel, P. Vigier, A. Hénaut and A. Danchin**	851–856
Crystallization and Preliminary X-ray Analysis of the Lactose-specific Phosphocarrier Protein IIA^{lac} of the Phosphoenolpyruvate : Sugar Phosphotransferase System from *Staphylococcus aureus*	**R. Celikel, X. Dai, G. C. Stewart, S. L. Sutrina, M. H. Saier, Jr, N.-h. Xuong and J. Reizer**	857–859
Crystallization of Diphtheria Toxin	**G. Fujii, S. Choe, M. J. Bennett and D. Eisenberg**	861–864
Crystals of the Complex between Human Growth Hormone and the Extracellular Domain of Its Receptor	**M. Ultsch, A. M. de Vos and A. A. Kossiakoff**	865–868
Crystallization of and Preliminary X-ray Data for the Negative Regulator (AmiC) of the Amidase Operon of *Pseudomonas aeruginosa*	**S. A. Wilson, N. E. Chayen, A. M. Hemmings, R. E. Drew and L. H. Pearl**	869–871
Crystallization and Preliminary X-ray Diffraction Studies of Dialkylglycine Decarboxylase, A Decarboxylating Transaminase	**M. D. Toney, J. W. Keller, R. A. Pauptit, J. Jaeger, M. K. Wise, U. Sauder and J. N. Jansonius**	873–875
Crystallization and Preliminary X-ray Analysis of Botulinum Neurotoxin Type A	**R. C. Stevens, M. L. Evenson, W. Tepp and B. R. DasGupta**	877–880
Crystallization and Preliminary X-ray Analysis of Phosphoporin from the Outer Membrane of *Escherichia coli*	**A. D. Tucker, S. Jackman, M. W. Parker and D. Tsernoglou**	881–884

Articles

Identification of NolR, a Negative Transacting Factor Controlling the *nod* Regulon in *Rhizobium meliloti*	**E. Kondorosi, M. Pierre, M. Cren, U. Haumann, M. Buiré, B. Hoffmann, J. Schell and A. Kondorosi**	885–896

Analysis of the Integration Function of the Streptomycete Bacteriophage ϕC31	**S. Kuhstoss and R. N. Rao**	897–908
Distribution of Topoisomerase II Cleavage Sites in Simian Virus 40 DNA and the Effects of Drugs	**Y. Pommier, G. Capranico, A. Orr and K. W. Kohn**	909–924
Mutational Specificity of the *dnaE173* Mutator Associated with a Defect in the Catalytic Subunit of DNA Polymerase III of *Escherichia coli*	**J.-Y. Mo, H. Maki and M. Sekiguchi**	925–936
1-Aminocyclopropane-1-Carboxylate Synthase in Tomato is Encoded by a Multigene Family Whose Transcription is Induced During Fruit and Floral Senescence	**W. H. Rottmann, G. F. Peter, P. W. Oeller, J. A. Keller, N. F. Shen, B. P. Nagy, L. P. Taylor, A. D. Campbell and A. Theologis**	937–961
Functional and Ultrastructural Effects of a Missense Mutation in the Indirect Flight Muscle-specific Actin Gene of *Drosophila melanogaster*	**J. Sparrow, M. Reedy, E. Ball, V. Kyrtatas, J. Molloy, J. Durston, E. Hennessey and D. White**	963–982
Analysis of Replicative Intermediates Produced during Bacteriophage ϕ29 DNA Replication *in Vitro*	**C. Gutiérrez, J. M. Sogo and M. Salas**	983–994
An Axial Binding Site in the *Tetrahymena* Precursor RNA	**M. Yarus, M. Illangesekare and E. Christian**	995–1012
Generalized Protein Tertiary Structure Recognition using Associative Memory Hamiltonians	**M. S. Friedrichs, R. A. Goldstein and P. G. Wolynes**	1013–1034
Solution Structure of the Tissue-type Plasminogen Activator Kringle 2 Domain Complexed to 6-Aminohexanoic Acid, an Antifibrinolytic Drug	**I.-J. L. Byeon and M. Llinás**	1035–1051
Three-dimensional Model for Stellacyanin, a "Blue" Copper-protein	**B. A. Fields, J. M. Guss and H. C. Freeman**	1053–1065
High Resolution Structure of an Oligomeric Eye Lens β-Crystallin. Loops, Arches, Linkers and Interfaces in βB2 Dimer Compared to a Monomeric γ-Crystallin	**R. Lapatto, V. Nalini, B. Bax, H. Driessen, P. F. Lindley, T. L. Blundell and C. Slingsby**	1067–1083
Accelerated DNA Renaturation: Complementary Recognition in Condensed DNA	**J.-L. Sikorav and G. M. Church**	1085–1108
Hierarchy of Globin Complexes. The Quaternary Structure of the Extracellular Chlorocruorin of *Eudistylia vancouverii*	**A. N. Qabar, M. S. Stern, D. A. Walz, J.-T. Chiu, R. Timkovich, J. S. Wall, O. H. Kapp and S. N. Vinogradov**	1109–1129
Chromatin Assembly on Plasmid DNA *in Vitro*. Apparent Spreading of Nucleosome Alignment from one Region of pBR327 by Histone H5	**S. W. Jeong, J. D. Lauderdale and A. Stein**	1131–1147
Poly[d(A·T)] and Other Synthetic Polydeoxynucleotides Containing Oligoadenosine Tracts form Nucleosomes Easily	**H. L. Puhl, S. R. Gudibande and M. J. Behe**	1149–1160
ms^2i^6A Deficiency Enhances Proofreading in Translation	**I. Díaz and M. Ehrenberg**	1161–1171
Erratum		1173
Author Index		1175–1176

Keyword Index

σ^{32}

Development of RNA Polymerase-Promoter Contacts during Open Complex Formation, **220**, 585–597.

A and B proteins

Two Mutations of Phage Mu Transposase that Affect Strand Transfer or Interactions with B Protein Lie in Distinct Polypeptide Domains, **219**, 189–199.

Abasic sites

Initiation of the UvrABC Nuclease Cleavage Reaction. Efficiency of Incision is not Correlated with UvrA Binding Affinity, **220**, 19–33.

(A)BC excinuclease

Identification of the Different Intermediates in the Interaction of (A)BC Excinuclease with its Substrates by DNase I Footprinting on two Uniquely Modified Oligonucleotides, **219**, 27–36.

Acetylation of amino groups

Role of Electrostatic Repulsion in the Acidic Molten Globule of Cytochrome *c*, **222**, 679–686.

Acrosomal process

Crystallographic Analysis of Acrosomal Bundle from *Limulus* Sperm, **221**, 711–725.

Actin

Angular Disorder in Actin: Is It Consistent with General Principles of Protein Structure?, **217**, 405–408.

Time-resolved Cryo-electron microscopic Study of the Dissociation of Actomyosin Induced by Photolysis of Photolabile Nucleotides, **219**, 139–143.

Crystallographic Analysis of Acrosomal Bundle from *Limulus* Sperm, **221**, 711–725.

Functional and Ultrastructural Effects of a Missense Mutation in the Indirect Flight Muscle-specific Actin Gene of *Drosophila melanogaster*, **222**, 963–982.

Actin assembly

Lithium Increases Actin Polymerization Rates by Enhancing the Nucleation Step, **217**, 401–404.

Actin binding

Identification of the Site Important for the Actin-activated MgATPase Activity of Myosin Subfragment-1, **217**, 229–233.

Activation

AraC–DNA Looping: Orientation and Distance-dependent Loop Breaking by the Cyclic AMP Receptor Protein, **218**, 45–54.

Organization and Function of Binding Sites for the Transcriptional Activator NifA in the *Klebsiella pneumoniae nifE* and *nifU* Promoters, **220**, 915–931.

Actomyosin

Time-resolved Cryo-electron microscopic Study of the Dissociation of Actomyosin Induced by Photolysis of Photolabile Nucleotides, **219**, 139–143.

Acyl transfer

Identification of the Acyl Transfer Site of Fatty Acyl-protein Synthetase from Bioluminescent Bacteria, **219**, 69–77.

Acyl-protein

Identification of the Acyl Transfer Site of Fatty Acyl-protein Synthetase from Bioluminescent Bacteria, **219**, 69–77.

Adeno-associated virus

In Vitro Rescue of an Integrated Hybrid Adeno-associated Virus/Simian Virus 40 Genome, **218**, 791–804.

Conserved Chromatin Structure in c-*myc* 5′-Flanking DNA after Viral Transduction, **222**, 45–57.

Adenovirus

Functional and Structural Effects of an Ala to Val Mutation in the Adenovirus Serotype 2 Fibre, **217**, 477–486.

Adenylate kinase

The Refined Structure of the Complex between Adenylate Kinase from Beef Heart Mitochondrial Matrix and its Substrate AMP at 1·85 Å Resolution, **217**, 541–549.

ADP

Bacterial DNA Supercoiling and [ATP]/[ADP]. Changes Associated with a Transition to Anaerobic Growth, **219**, 443–450.

ADP-ribosylation

Crystallization of Diphtheria Toxin, **222**, 861–864.

Agarose/polyacrylamide

A Study of Electrophoretic Mobility of DNA in Agarose and Polyacrylamide Gels, **221**, 981–1005.

Aggregation

Isolation and *in Vitro* Characterization of Temperature-sensitive Mutants of the Bacteriophage f1 Gene V Protein, **219**, 257–275.

Aging

Refined Crystal Structures of "Aged" and "Non-aged" Organophosphoryl Conjugates of γ-Chymotrypsin, **221**, 909–918.

Ala-Val mutation

Functional and Structural Effects of an Ala to Val Mutation in the Adenovirus Serotype 2 Fibre, **217**, 477–486.

Albumin promoter mutants

NFY or a Related CCAAT Binding Factor Can Be Replaced by Other Transcriptional Activators for Cooperation with HNF1 in Driving the Rat Albumin Promoter *in Vivo*, **222**, 31–43.

Aldose reductase

Purification, Crystallization and Preliminary Crystallographic Analysis of Porcine Aldose Reductase, **218**, 695–698.

Algorithm

An Efficient Algorithm for Identifying Matches with Errors in Multiple Long Molecular Sequences, **221**, 1367–1378.

Alignment algorithms

Amino Acid Substitution Matrices from an Information Theoretic Perspective, **219**, 555–565.

Alignment significance

Suboptimal Sequence Alignment in Molecular Biology. Alignment with Error Analysis, **221**, 403–419.

Alkaline phosphatase

Reaction Mechanism of Alkaline Phosphatase Based on Crystal Structures. Two-metal Ion Catalysis, **218**, 449–464.

Allosteric control

Structural Mechanism for Glycogen Phosphorylase Control by Phosphorylation and AMP, **218**, 233–260.

Allosteric effects

Regulation of Smooth Muscle Myosin Light Chain Kinase. Allosteric Effects and Co-operative Activation by Calmodulin, **220**, 947–957.

Allostery

Allosteric Transition in Triply Met-Haemoglobin, **217**, 303–306.

Molecular Size and Symmetry of *Pseudomonas aeruginosa* Catabolic Ornithine Carbamoyltransferase. An X-ray Crystallography Analysis, **220**, 9–12.

Heterotropic Interactions in *Escherichia coli* Aspartate Transcarbamylase. Subunit Interfaces Involved in CTP Inhibition and ATP Activation, **220**, 789–799.

Alpha-lytic protease

Computational Method for the Design of Enzymes with Altered Substrate Specificity, **220**, 495–506.

Alphaviruses

X-ray Solution Scattering of Sindbis Virus. Changes in Conformation Induced at Low pH, **221**, 39–42.

Alternating A-T sequences
Solution Structure of $[d(GTATATAC)]_2$ *via* Restrained Molecular Dynamics Simulations with Nuclear Magnetic Resonance Constraints Derived from Relaxation Matrix Analysis of Two-dimensional Nuclear Overhauser Effect Experiments, **221**, 271–292.

Alternating purine-pyrimidine sequence
Different Intrastrand and Interstrand Contributions to Stacking Account for Roll Variations at the Alternating Purine-Pyrimidine Sequences in *A*-DNA and *A*-RNA, **221**, 761–764.

Alternative sites
Influences of Separation and Adjacent Sequences on the Use of Alternative 5′ Splice Sites, **217**, 265–281.

Alternative splicing β-tropomyosin pre-mRNA
Determination of an RNA Structure Involved in Splicing Inhibition of a Muscle-specific Exon, **221**, 837–856.

Amber mutations
Systematic Mutation of Bacteriophage T4 Lysozyme, **222**, 67–87.

Amber suppression
Effects of the Nucleotide 3′ to an Amber Codon on Ribosomal Selection Rates of Suppressor tRNA and Release Factor-1, **219**, 231–241.

Amidase
Crystallization of and Preliminary X-ray Data for the Negative Regulator (AmiC) of the Amidase Operon of *Pseudomonas aeruginosa*, **222**, 869–871.

Amino acid packing
Protein Folding. Effect of Packing Density on Chain Conformation, **219**, 109–122.

amino acid replacements
Effect of Single Amino Acid Replacements on the Thermodynamics of the Reactive Site Peptide Bond Hydrolysis in Ovomucoid Third Domain, **220**, 1041–1053.

Amino acid sequence
Identification of the Site Important for the Actin-activated MgATPase Activity of Myosin Subfragment-1, **217**, 229–233.
Amino Acids Responsible for Flagellar Shape are Distributed in Terminal Regions of Flagellin, **219**, 471–480.
Molecular Characterization of Cuticle and Interstitial Collagens from Worms Collected at Deep Sea Hydrothermal Vents, **221**, 209–223.

Amino acid similarities
Amino Acid Similarity Coefficients for Protein Modeling and Sequence Alignment Derived from Main-chain Folding Angles, **219**, 481–497.

Amino acid structure correlation
Amino Acid Similarity Coefficients for Protein Modeling and Sequence Alignment Derived from Main-chain Folding Angles, **219**, 481–497.

Amino acid substitutions
Temperature-sensitive Variants of *Saccharomyces cerevisiae* Iso-1-cytochrome *c* Produced by Random Mutagenesis of Codons 43 to 54, **221**, 97–105.

Aminotransferase
New Crystal Form of Cytosolic Chicken Asparate Aminotransferase Suitable for High-resolution X-ray Analysis, **221**, 61–63.

Aminotransferases
1-Aminocyclopropane-1-Carboxylate Synthase in Tomato is Encoded by a Multigene Family Whose Transcription is Induced During Fruit and Floral Senescence, **222**, 937–961.

AMP activation of glycogen phosphorylase
Structural Mechanism for Glycogen Phosphorylase Control by Phosphorylation and AMP, **218**, 233–260.

Amphiphilic polypeptide
Anion and pH-dependent Conformational Transition of an Amphiphilic Polypeptide, **218**, 387–396.

α-amylase
Preliminary X-ray Investigation of a Bifunctional Inhibitor from Indian Finger Millet (Ragi), **222**, 1–2.

Amyloid βA4
Aggregation and Secondary Structure of Synthetic Amyloid βA4 Peptides of Alzheimer's Disease, **218**, 149–163.

Anaerobiosis
Bacterial DNA Supercoiling and [ATP]/[ADP]. Changes Associated with a Transition to Anaerobic Growth, **219**, 443–450.

Anion binding
Preliminary Crystallographic Studies of Copper(II)-and Oxalate-substituted Human Lactoferrin, **219**, 155–159.

Annexin
Structure of Soluble and Membrane-bound Human Annexin V, **220**, 199–203.

Annexin-V
Sub-domain Structure of Lipid-bound Annexin-V Resolved by Electron Image Analysis, **217**, 241–245.

Anomalous dispersion
Crystallization and Preliminary X-ray Crystallographic Analysis of Verotoxin-1 B-subunit, **221**, 729–731.

Anthramycin
Repair of Helix-stabilizing Anthramycin–N2 Guanine DNA Adducts by UVRA and UVRB Proteins, **220**, 855–866.

Antibody
2·9 Å Resolution Structure of an Anti-dinitrophenyl-spin-label Monoclonal Antibody Fab Fragment with Bound Hapten, **221**, 239–256.
Characterization of Crystals of An Fab Fragment of a Murine Monoclonal Antibody, **222**, 445–446.

Antibody diversity
Structure, Function and Properties of Antibody Binding Sites, **217**, 133–151.

Antibody sequence
Biochemical Implications from the Variable Gene Sequences of an Anti-cytochrome *c* Antibody and Crystallographic Characterization of its Antigen-binding Fragment in Free and Antigen-complexed Forms, **221**, 455–462.

α_1-antichymotrypsin
Crystal Structure of Cleaved Human α_1-Antichymotrypsin at 2·7 Å Resolution and its Comparison with other Separins, **218**, 595–606.

Anticodon composition
Novel Anticodon Composition of Transfer RNAs in *Micrococcus luteus*, a Bacterium with a High Genomic G + C Content. Correlation with Codon Usage, **221**, 387–401.

Anticodon domain
Binding of the Anticodon Domain of $tRNA_f^{Met}$ to *Escherichia coli* Methionyl-tRNA Synthetase, **220**, 205–208.

Anti-DNP
Structural and Kinetic Studies of the Fab Fragment of a Monoclonal Anti-spin Label Antibody by Nuclear Magnetic Resonance, **221**, 257–270.

Antigen–antibody interactions
Structure, Function and Properties of Antibody Binding Sites, **217**, 133 151.

Antigenicity
Refined Atomic Structures of N9 Subtype Influenza Virus Neuraminidase and Escape Mutants, **221**, 487–497.

Anti-sense RNA
Structure and Inheritance of Sense and Anti-sense Transcripts from a Transposon in the Green Alga *Chlamydomonas reinhardtii*, **218**, 273–291.

Antisense RNA
Developmental Regulation of Covalent Modification of Double-stranded RNA during Silkmoth Oogenesis, **218**, 517–527.

Anti-T lectin
Preparation and X-ray Characterization of Four New Crystal Forms of Jacalin, a Lectin from *Artocarpus integrifolia*, **221**, 773–776.

Antitermination
Specificity of Antitermination Mechanisms. Suppression of the Terminator Cluster T1-T2 of *Escherichia coli* Ribosomal RNA operon, *rrnB*, by Phage λ Antiterminators, **222**, 59–66.

Anti-termination mechanism
Crystallization of and Preliminary X-ray Data for the Negative Regulator (AmiC) of the Amidase Operon of *Pseudomonas aeruginosa*, **222**, 869–871.

α_1-antitrypsin
Serpin Tertiary Structure Transformation, **221**, 615–621.

Antiviral
Human Rhinovirus 14 Complexed with Antiviral Compound R 61837, **217**, 455–463.

Antiviral protein
Escherichia coli Ribosome is Inactivated by Mirabilis Antiviral Protein which Cleaves the *N*-Glycosidic Bond at A2660 of 23 S Ribosomal RNA, **221**, 737–743.

APRT
Mutational Analysis of the Structure and Function of the Adenine Phosphoribosyltransferase Enzyme of Chinese Hamster, **221**, 163–174.

Arabidopsis thaliana
rDNA Intergenic Region from *Arabidopsis thaliana*. Structural Analysis, Intraspecific Variation and Functional Implications, **221**, 1209–1222.

AraC
AraC–DNA Looping: Orientation and Distance-dependent Loop Breaking by the Cyclic AMP Receptor Protein, **218**, 45–54.

Archaea
Control Regions of an Archaeal Gene. A TATA Box and an Initiator Element Promote Cell-free Transcription of the $tRNA^{Val}$ Gene of *Methanococcus vannielii*, **222**, 495–508.

Archaebacteria
Crystallization and Preliminary Crystallographic Study of Glucose Dehydrogenase from the Archaebacterium *Thermoplasma acidophilum*, **222**, 143–144.
Detailed Physical Map and Set of Overlapping Clones Covering the Genome of the Archaebacterium *Haloferax volcani* DS2, **222**, 509–524.

Aromatic amino acid binding site
Amino Acid Substrate Specificity of *Escherichia coli* Phenylalanyl-tRNA Synthetase Altered by Distinct Mutations, **222**, 99–124.

Aromatic–aromatic interaction
π–π Interactions: the Geometry and Energetics of Phenylalanine–Phenylalanine Interactions in Proteins, **218**, 837–846.

Artificial mutant
Site-directed Mutagenesis in Haemoglobin. Functional Role of Tyrosine-42(C7)α at the $\alpha 1$–$\beta 2$ Interface, **218**, 769–778.

Asparagine synthetase
Structure and Evolution of a Group of Related Aminoacyl-tRNA Synthetases, **218**, 557–568.

Aspartate
Crystallization and Preliminary X-ray Diffraction Study of the Ligand-binding Domain of the Bacterial Chemotaxis-mediating Aspartate Receptor of *Salmonella typhimurium*, **221**, 31–34.
New Crystal Form of Cytosolic Chicken Asparate Aminotransferase Suitable for High-resolution X-ray Analysis, **221**, 61–63.

Aspartate transcarbamylase
Heterotropic Interactions in *Escherichia coli* Aspartate Transcarbamylase. Subunit Interfaces Involved in CTP Inhibition and ATP Activation, **220**, 789–799.

Aspartic proteinase
Crystallization and Preliminary Crystallographic Study of Cathepsin D Inhibitor from Potatoes, **218**, 21–22.
X-ray Analyses of Aspartic Proteinases IV. Structure and Refinement at 2·2 Å Resolution of Bovine Chymosin, **221**, 1295–1309.

Aspartyl-tRNA synthetase
Structure and Evolution of a Group of Related Aminoacyl-tRNA Synthetases, **218**, 557–568.

Assembly
Single Charge Change on the Helical Surface of the Paramyosin Rod Dramatically Disrupts Thick Filament Assembly in *Caenorhabditis elegans*, **219**, 429–441.

Assembly mechanism
Dynamic Monte Carlo Simulations of a New Lattice Model of Globular Protein Folding, Structure and Dynamics, **221**, 499–531.

Association pathway
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interactions with RNA. II. Physical Chemical Studies, **221**, 1139–1151.

Associative memories
Generalized Protein Tertiary Structure Recognition using Associative Memory Hamiltonians, **222**, 1013–1034.

Atlas of sequences
A New Family of Powerful Multivariate Statistical Sequence Analysis Techniques, **220**, 877–887.

$(A{\cdot}T)_n$ sequences
Structural Alteration in Alternating Adenine-Thymine Sequences in Positively Supercoiled DNA, **219**, 145–149.

ATP
Bacterial DNA Supercoiling and [ATP]/[ADP]. Changes Associated with a Transition to Anaerobic Growth, **219**, 443–450.

ATPase
Preliminary Crystallographic Analysis of the ATP-hydrolysing Domain of the *Escherichia coli* DNA Gyrase B Protein, **217**, 15–17.
DNA-induced Dimerization of the *Escherichia coli* Rep Helicase, **221**, 1165–1181.

ATPase kinetics
A Folded (10 S) Conformer of Myosin from a Striated Muscle and its Implications for Regulation of ATPase Activity, **217**, 323–335.

A-tracts
Synthetic DNA Bending Sequences Increase the Rate of *in Vitro* Transcription Initiation at the *Escherichia coli lac* Promoter, **219**, 217–230.

Attenuation
In Vivo Analysis of Overlapping Transcription Units in the *rplKAJLrpoBC* Ribosomal Protein–DNA Polymerase Gene Cluster of *Escherichia coli*, **218**, 23–31.

Autoantibody
Structural and Kinetic Studies of the Fab Fragment of a Monoclonal Anti-spin Label Antibody by Nuclear Magnetic Resonance, **221**, 257–270.

Autogene
Creation of a T7 Autogene. Cloning and Expression of the Gene for Bacteriophage T7 RNA Polymerase under Control of Its Cognate Promoter, **219**, 61–68.

AUU initiation
Programmed Translational Frameshifting and Initiation at an AUU Codon in Gene Expression of Bacterial Insertion Sequence IS*911*, **222**, 465–477.

Azurin
X-ray Crystal Structure of the Two Site-specific Mutants His35Gln and His35Leu of Azurin from *Pseudomonas aeruginosa*, **218**, 427–447.
Crystal Structure Analysis of Oxidized *Pseudomonas aeruginosa* Azurin at pH 5·5 and pH 9·0. A pH-induced Conformational Transition Involves a Peptide Bond Flip, **221**, 765–772.

B subunit
Crystallization of the B Chain of Shiga-like Toxin I from *Escherichia coli*, **218**, 691–694.

βB2
High Resolution Structure of an Oligomeric Eye Lens β-Crystallin. Loops, Arches, Linkers and Interfaces in βB2 Dimer Compared to a Monomeric γ-Crystallin, **222**, 1067–1083.

Bacillus subtilis
The Stringent Response Blocks DNA Replication Outside the *ori* Region in *Bacillus subtilis* and at the Origin in *Escherichia coli*, **219**, 605–613.
Complete Physical Map of the *Bacillus subtilis* 168 Chromosome Constructed by a Gene-directed Mutagenesis Method, **220**, 631–648.
Sporulation Operon *spoIVF* and the Characterization of Mutations that Uncouple Mother-cell from Forespore Gene Expression in *Bacillus subtilis*, **221**, 1237–1256.
Normal *terC*-Region of the *Bacillus subtilis* Chromosome Acts in a Polar Manner to Arrest the Clockwise Replication Fork, **222**, 197–207.

Backbone dynamics
Solid-state Nuclear Magnetic Resonance Derived Model for Dynamics in the Polypeptide Backbone of the Gramicidin A Channel, **218**, 621–637.

Bacterial flagella
Preparing Well-oriented Sols of Straight Bacterial Flagellar Filaments for X-ray Fiber Diffraction, **217**, 293–302.
A Molecular Switch: Subunit Rotations Involved in the Right-handed to Left-handed Transitions of *Salmonella typhimurium* Flagellar Filaments, **220**, 67–77.
Point Mutations that Lock *Salmonella typhimurium* Flagellar Filaments in the Straight Right-handed and Left-handed Forms and their Relation to Filament Superhelicity, **220**, 79–88.

Bacterial motility
A Molecular Switch: Subunit Rotations Involved in the Right-handed to Left-handed Transitions of *Salmonella typhimurium* Flagellar Filaments, **220**, 67–77.
Mutations in the MotA Protein of *Escherichia coli* Reveal Domains Critical for Proton Conduction, **221**, 1433–1442.

Bacterial promoters
Osmotic Induction of Gene *osmC* Expression in *Escherichia coli* K12, **220**, 959–973.

Bacterial ribonuclease of *Bacillus amyloliquefaciens* (barnase)
Accurate Measurements of Coupling Constants from Two-dimensional Nuclear Magnetic Resonance Spectra of Proteins and Determination of ϕ-Angles, **217**, 731–736.

Bacteriophage
DNA Sequence of the Filamentous Bacteriophage Pf1, **218**, 349–364.
Analysis of the Integration Function of the Streptomycete Bacteriophage ϕC31, **222**, 897–908.

Bacteriophage fd
Regulation of Filamentous Bacteriophage Length by Modification of Electrostatic Interactions Between Coat Protein and DNA, **217**, 223–227.

Bacteriophage lambda
Behavior of a Cross-linked Attachment Site: Testing the Role of Branch Migration in Site-specific Recombination, **220**, 621–629.

Bacteriophage λ
RNA Polymerase Bound to the P_R Promoter of Bacteriophage λ Inhibits Open Complex Formation at the Divergently Transcribed P_{RM} Promoter. Implications for an Indirect Mechanism of Transcriptional Activation by λ Repressor, **222**, 479–494.

Bacteriophage T4
Reiterated Gene Amplifications at Specific Short Homology Sequences in Phage T4 Produce Hp17 Mutants, **218**, 705–721.

Bacteriophage ϕ29
Analysis of Replicative Intermediates Produced during Bacteriophage ϕ29 DNA Replication *in Vitro*, **222**, 983–994.

Bacteriophage ϕ6
Generation of Infectious Nucleocapsids by *in Vitro* Assembly of the Shell Protein on to the Polymerase Complex of the dsRNA Bacteriophage ϕ6, **218**, 569–581.

Barley serine proteinase inhibitor 2 (CI-2)
Accurate Measurements of Coupling Constants from Two-dimensional Nuclear Magnetic Resonance Spectra of Proteins and Determination of ϕ-Angles, **217**, 731–736.

Barnase
Mapping Transition States of Protein Unfolding by Protein Engineering of Ligand-binding Sites, **221**, 1007–1014.

Base mismatches
Effects of Base Mismatches on the Structure of the Four-way DNA junction, **221**, 147–161.

Base stacking
Different Intrastrand and Interstrand Contributions to Stacking Account for Roll Variations at the Alternating Purine-Pyrimidine Sequences in *A*-DNA and *A*-RNA, **221**, 761–764.

Basic fibroblast growth factor
Preliminary X-ray Crystallographic Analysis of a Modified Basic Fibroblast Growth Factor, **218**, 493–494.

Beet yellows virus
Putative 65 kDa Protein of Beet Yellows Closterovirus Is a Homologue of HSP70 Heat Shock Proteins, **217**, 603–610.

Bending
Factor-independent Activation of *Escherichia coli* rRNA Transcription. II. Characterization of Complexes of *rrnB* P1 Promoters Containing or Lacking the Upstream Activator Region with *Escherichia coli* RNA Polymerase, **220**, 569–583.

Bends and turns
Dynamic Monte Carlo Simulations of a New Lattice Model of Globular Protein Folding, Structure and Dynamics, **221**, 499–531.

Bent-DNA in nucleosomes
In Vitro Assembly of a Positioned Nucleosome near the Hypersensitive Region in Simian Virus 40 Chromatin, **221**, 795–803.

Benzamidine
Crystallographic Analysis of Trypsin-G226A. A Specificity Pocket Mutant of Rat Trypsin with Altered Binding and Catalysis, **219**, 525–532.

Benzylaminopurine
Crystallization and Preliminary X-ray Analysis of Peanut Agglutinin–N^6-benzylaminopurine Complex, **219**, 151–153.

Bifunctional inhibitor
Preliminary X-ray Investigation of a Bifunctional Inhibitor from Indian Finger Millet (Ragi), **222**, 1–2.

Binding
DNA–Drug Interactions. The Crystal Structures of d(TGTACA) and d(TGATCA) Complexed with Daunomycin, **222**, 167–177.

Binding protein
Preliminary Crystallographic Studies of Copper(II)-and Oxalate-substituted Human Lactoferrin, **219**, 155–159.

Biogenesis
Carboxy-terminal Phenylalanine is Essential for the Correct Assembly of a Bacterial Outer Membrane Protein, **218**, 141–148.

Biological electron transfer
Molecular Structure of Cytochrome c_2 Isolated from *Rhodobacter capsulatus* Determined at 2·5 Å Resolution, **220**, 673–685.

Biomolecular dynamics
Generalized Protein Tertiary Structure Recognition using Associative Memory Hamiltonians, **222**, 1013–1034.

Bisphosphoglycerate mutase
Crystallization and Preliminary X-ray Diffraction Studies of the Human Erythrocyte Bisphosphoglycerate Mutase, **218**, 269–270.

Blood anticoagulant
Crystallization and Preliminary X-ray Study of Blood Coagulation Factor IX/Factor X-binding Protein with Anticoagulant Activity from Habu Snake Venom, **220**, 225–226.

Blood coagulation
Refined Structure of the Hirudin–Thrombin Complex, **221**, 583–601.

Blue copper protein
Preliminary Crystallographic Study of a Pseudoazurin from Methylotrophic Bacterium, *Methylobacterium extorquens* AM1, **218**, 19–20.
X-ray Crystal Structure of the Two Site-specific Mutants His35Gln and His35Leu of Azurin from *Pseudomonas aeruginosa*, **218**, 427–447.

Blue copper-protein
Three-dimensional Model for Stellacyanin, a "Blue" Copper-protein, **222**, 1053–1065.

Blue-copper
Construction of New Ligand Binding Sites in Proteins of Known Structure. I. Computer-aided Modeling of Sites with Pre-defined Geometry, **222**, 763–785.
Construction of New Ligand Binding Sites in Proteins of Known Structure. II. Grafting of a Buried Transition Metal Binding Site into *Escherichia coli* Thioredoxin, **222**, 787–803.

Bombyx mori
Structures and Organization of Major Plasma Protein Genes of the Silkworm *Bombyx mori*, **218**, 7–12.
Developmental Regulation of Covalent Modification of Double-stranded RNA during Silkmoth Oogenesis, **218**, 517–527.

Bone
Three-dimensional Spatial Relationship between the Collagen Fibrils and the Inorganic Calcium Phosphate Crystals of Pickerel (*Americanus americanus*) and Herring (*Clupea harengus*) Bone, **217**, 487–501.

Botulinum neurotoxin
Crystallization and Preliminary X-ray Analysis of Botulinum Neurotoxin Type A, **222**, 877–880.

Bound water
Determination of the Positions of Bound Water Molecules in the Solution Structure of Reduced Human Thioredoxin by Heteronuclear Three-dimensional Nuclear Magnetic Resonance Spectroscopy, **220**, 209–216.

Bovine pancreatic trypsin inhibitor (BPTI)
(14–38, 30–51) Double-disulphide Intermediate in Folding of Bovine Pancreatic Trypsin Inhibitor: A Two-dimensional ^{1}H Nuclear Magnetic Resonance, **222**, 353–371.
Two-dimensional ^{1}H Nuclear Magnetic Resonance Study of the (5–55) Single-disulphide Folding Intermediate of Bovine Pancreatic Trypsin Inhibitor, **222**, 373–390.

BPTI
Crystal Structure of a Y35G Mutant of Bovine Pancreatic Trypsin Inhibitor, **220**, 757–770.

Brain
Distinct Forms of the Protein Kinase-dependent Activator of Tyrosine and Trytophan Hydroxylases, **217**, 125–132.

Branch migration
Behavior of a Cross-linked Attachment Site: Testing the Role of Branch Migration in Site-specific Recombination, **220**, 621–629.

Bromoperoxidase
Crystallization and Preliminary X-ray Data of Bromoperoxidase from *Streptomyces aureofaciens* ATCC 10762, **221**, 35–37.

c-*myc*
Conserved Chromatin Structure in c-*myc* 5′-Flanking DNA after Viral Transduction, **222**, 45–57.

ϕC31
Analysis of the Integration Function of the Streptomycete Bacteriophage ϕC31, **222**, 897–908.

CA^{2+}/phospholipid binding proteins
Sub-domain Structure of Lipid-bound Annexin-V Resolved by Electron Image Analysis, **217**, 241–245.

Caenorhabditis elegans
Single Charge Change on the Helical Surface of the Paramyosin Rod Dramatically Disrupts Thick Filament Assembly in *Caenorhabditis elegans*, **219**, 429–441.

Caged nucleotides
Time-resolved Cryo-electron microscopic Study of the Dissociation of Actomyosin Induced by Photolysis of Photolabile Nucleotides, **219**, 139–143.

Calbindin D_{9k}
Molecular Basis for Co-operativity in Ca^{2+} Binding to Calbindin D_{9k}. ^{1}H Nuclear Magnetic Resonance Studies of $(Cd^{2+})_1$–Bovine Calbindin D_{9k}, **220**, 173–189.

Calcium binding
Crystal Structure of Human α-Lactalbumin at 1·7 Å Resolution, **221**, 571–581.

Calcium binding protein
Ionic Interactions with Parvalbumins. Crystal Structure Determination of Pike 4·10 Parvalbumin in Four Different Ionic Environments, **220**, 1017–1039.

Calcium regulation
Distinct Forms of the Protein Kinase-dependent Activator of Tyrosine and Trytophan Hydroxylases, **217**, 125–132.
Chimaeric Myosin Regulatory Light Chains: Sub-domain Switching Experiments to Analyse the Function of the N-Terminal EF Hand, **218**, 825–835.

Calcium sites
Structure of Cyclodextrin Glycosyltransferase Refined at 2·0 Å Resolution, **217**, 737–750.

Calcium-activated
Crystallization of the Calcium-activated Phosphoenolpyruvate Carboxykinase from *Escherichia coli* K12, **219**, 593–594.

Calcium-binding protein
Crystallization and Preliminary X-ray Investigation of a Sarcoplasmic Calcium-binding Protein from Amphioxus, **221**, 1071–1073.

Calf chymosin
X-ray Analyses of Aspartic Proteinases IV. Structure and Refinement at 2·2 Å Resolution of Bovine Chymosin, **221**, 1295–1309.

Calmodulin
Regulation of Smooth Muscle Myosin Light Chain Kinase. Allosteric Effects and Co-operative Activation by Calmodulin, **220**, 947–957.

Calorimetry
Domain Structure and Interactions of the Type I and Type II Modules in the Gelatin-binding Region of Fibronectin. All Six Modules Are Independently Folded, **217**, 563–575.

Caltractin
Genomic Structure of *Chlamydomonas* Caltractin. Evidence for Intron Insertion Suggests a Probable Genealogy for the EF-hand Superfamily of Proteins, **221**, 175–191.

Camptothecin
New Technique for Uncoupling the Cleavage and Religation Reactions of Eukaryotic Topoisomerase I. The Mode of Action of Camptothecin at a Specific Recognition Site, **222**, 669–678.

Cancer
Crystallization of Human Thymidylate Synthase, **219**, 161–163.

CAP
CAP and Nag Repressor Binding to the Regulatory Regions of the *nagE-B* and *manX* Genes of *Escherichia coli*, **217**, 661–679.

CAP/CRP protein
Catabolite Activator Protein-induced DNA Bending in Transcription Initiation, **219**, 201–215.

Carbamoyltransferase
Molecular Size and Symmetry of *Pseudomonas aeruginosa* Catabolic Ornithine Carbamoyltransferase. An X-ray Crystallography Analysis, **220**, 9–12.

Carbohydrate/protein interactions
Lysozyme Revisited: Crystallographic Evidence for Distortion of an *N*-Acetylmuramic Acid Residue Bound in Site D, **220**, 401–424.

Carbohydrates
Crystal Structure of Cleaved Human α_1-Antichymotrypsin at 2·7 Å Resolution and its Comparison with other Separins, **218**, 595–606.

Carboxypeptidase G_2 from *Pseudomonas* sp. strain RS-16
Crystallization and Preliminary Crystallographic Analysis of Carboxypeptidase G_2 from *Pseudomonas* sp. Strain RS-16, **220**, 17–18.

Cardiomyopathy
Isolation and Characterization of a Previously Unrecognized Myosin Heavy Chain Gene Present in the Syrian Hamster, **218**, 657–665.

Cardiotoxin
Preliminary Crystallographic Analysis of Cardiotoxin V with Major Fusion Activity from Taiwan Cobra (*Naja naja atra*) Venom, **219**, 591– 597.

CAT family
A Widely Distributed "CAT" Family of Repetitive DNA Sequences, **217**, 629–635.

Catabolic operon
Crystallization of and Preliminary X-ray Data for the Negative Regulator (AmiC) of the Amidase Operon of *Pseudomonas aeruginosa*, **222**, 869–871.

Catabolite repression
An *Escherichia coli rpoB* Mutation that Inhibits Transcription of Catabolite-sensitive Operons, **222**, 189–196.

catalase
Crystallization and Crystal Packing of *Proteus mirabilis* PR Catalase, **221**, 1075–1077.

Catalytic RNA
Nuclear Magnetic Resonance Studies of the Hammerhead Ribozyme Domain. Secondary Structure Formation and Magnesium Ion Dependence, **217**, 113–124.
Sequence Changes in Both Flanking Sequences of a Pre-tRNA Influence the Cleavage Specificity of RNase P, **217**, 637–648.

Cathepsin D
Crystallization and Preliminary Crystallographic Study of Cathepsin D Inhibitor from Potatoes, **218**, 21–22.

Cathepsin D inhibitor from potatoes
Crystallization and Preliminary Crystallographic Study of Cathepsin D Inhibitor from Potatoes, **218**, 21–22.

Cation binding site
Ionic Interactions with Parvalbumins. Crystal Structure Determination of Pike 4·10 Parvalbumin in Four Different Ionic Environments, **220**, 1017–1039.

Cation dependence
Multinuclear Nuclear Magnetic Resonance Studies of Na Cation-stabilized Complex Formed by d(G-G-T-T-T-T-C-G-G) in Solution. Implications for G-tetrad Structures, **222**, 819–832.

Caulobacter
Identification of *Cis* and *Trans*-elements Involved in the Timed Control of a *Caulobacter* Flagellar Gene, **217**, 247–257.

CCAAT element
Regulatory Elements Mediating Transcription of the Human Ha-*ras* Gene, **220**, 599–611.

CCP
Structure and Evolution of the Cytotoxic Cell Proteinase Genes CCP3, CCP4 and CCP5, **220**, 867–875.

Cell cycle
A General Approach to the Isolation of Cell Cycle-regulated Genes in the Budding Yeast, *Saccharomyces cerevisiae*, **218**, 543–556.

Cell-cycle
Identification of *Cis* and *Trans*-elements Involved in the Timed Control of a *Caulobacter* Flagellar Gene, **217**, 247–257.

Cell-free transcription
Control Regions of an Archaeal Gene. A TATA Box and an Initiator Element Promote Cell-free Transcription of the $tRNA^{Val}$ Gene of *Methanococcus vannielii*, **222**, 495–508.

Centromere
A Large Number of tRNA Genes are Symmetrically Located in Fission Yeast Centromeres, **218**, 13–17.

Channel
Structure of Soluble and Membrane-bound Human Annexin V, **220**, 199–203.

Channels
Co-crystals of Gramicidin A and Phospholipid. A System for Studying the Structure of a Transmembrane Channel, **217**, 625–627.

Chemical modification
Use of Chemical Modification in the Crystallization of Isocitrate Lyase from *Escherichia coli*, **220**, 13–16.

Chemical reactivity of DNA
Structural Alteration in Alternating Adenine-Thymine Sequences in Positively Supercoiled DNA, **219**, 145–149.

Chemical shift
Relationship between Nuclear Magnetic Resonance Chemical Shift and Protein Secondary Structure, **222**, 311–333.

Chemotaxis
Crystallization and Preliminary X-ray Diffraction Study of the Ligand-binding Domain of the Bacterial Chemotaxis-mediating Aspartate Receptor of *Salmonella typhimurium*, **221**, 31–34.

Chicken egg-white lysozyme
Lysozyme Revisited: Crystallographic Evidence for Distortion of an *N*-Acetylmuramic Acid Residue Bound in Site D, **220**, 401–424.

Chicken myosin
Identification of the Site Important for the Actin-activated MgATPase Activity of Myosin Subfragment-1, **217**, 229–233.

Chironomus
Proton Nuclear Magnetic Resonance Study of the Solution Distal Histidine Orientation in Monomeric *Chironomus thummi thummi* Cyanomet Hemoglobins. Dynamic Stability of the Heme Pocket as Monitored by Labile Proton Exchange, **221**, 1015–1026.

Chlamydomonas eugametos
Six Group I Introns and Three Internal Transcribed Spacers in the Chloroplast Large Subunit Ribosomal RNA Gene of the Green Alga *Chlamydomonas eugametos*, **218**, 293–311.

Chlamydomonas reinhardtii
Structure and Inheritance of Sense and Anti-sense Transcripts from a Transposon in the Green Alga *Chlamydomonas reinhardtii*, **218**, 273–291.

Chlorocruorin
Hierarchy of Globin Complexes. The Quaternary Structure of the Extracellular Chlorocruorin of *Eudistylia vancouverii*, **222**, 1109–1129.

Chloroplast DNA
Six Group I Introns and Three Internal Transcribed Spacers in the Chloroplast Large Subunit Ribosomal RNA Gene of the Green Alga *Chlamydomonas eugametos*, **218**, 293–311.

Cholesterol oxidase
Crystal Structure of Cholesterol Oxidase from *Brevibacterium sterolicum* Refined at 1·8 Å Resolution, **219**, 533–554.

Chromatin
Chromatosome Positioning on Assembled Long Chromatin. Linker Histones Affect Nucleosome Placement on 5 S rDNA, **220**, 89–100.
Mobility of Positioned Nucleosomes on 5 S rDNA, **220**, 101–110.
Topoisomer Heterogeneity of Plasmid Chromatin in Living Cells, **222**, 133–137.
Chromatin Assembly on Plasmid DNA *in Vitro*. Apparent Spreading of Nucleosome Alignment from one Region of pBR327 by Histone H5, **222**, 1131–1147.

Chromatin reconstitution
Can One Measure the Free Energy of Binding of the Histone Octamer to Different DNA Sequences by Salt-dependent Reconstitution?, **219**, 391–392.

Chromatin structure
Differentiation-dependent Alteration in the Chromatin Structure of Chromosomal Protein HMG-17 Gene During Erythropoiesis, **217**, 75–84.
In Vitro Assembly of a Positioned Nucleosome near the Hypersensitive Region in Simian Virus 40 Chromatin, **221**, 795–803.
Conserved Chromatin Structure in c-*myc* 5′-Flanking DNA after Viral Transduction, **222**, 45–57.

Chromatosome
Chromatosome Positioning on Assembled Long Chromatin. Linker Histones Affect Nucleosome Placement on 5 S rDNA, **220**, 89–100.

Chromophore
Isolation, Crystallization, Crystal Structure Analysis and Refinement of Constitutive C-phycocyanin from the Chromatically Adapting Cyanobacterium *Fremyella diplosiphon* at 1·66 Å Resolution, **217**, 577–592.

Chymotrypsin
Refined Crystal Structures of "Aged" and "Non-aged" Organophosphoryl Conjugates of γ-Chymotrypsin, **221**, 909–918.

Chymotrypsinogen
Three-dimensional Structure of the Complexes between Bovine Chymotrypsinogen A and Two Recombinant Variants of Human Pancreatic Secretory Trypsin Inhibitor (Kazal-type), **220**, 711–722.

CI-2
Refinement of the Three-dimensional Solution Structure of Barley Serine Proteinase Inhibitor 2 and Comparison with the Structures in Crystals, **222**, 621–635.

***cIII* gene**
Functional and Structural Elements of the mRNA of the *cIII* Gene of Bacteriophage Lambda, **218**, 723–733.

Circular dichroism
Circular Dichroism and Fluorescence Analysis of the Interaction of Pf1 Gene *5* Protein with Poly(dT), **217**, 681–689.
Spectroscopic Studies on *λcro* Protein–DNA Interactions, **219**, 733–746.
Kinetic Analysis of the Acid and the Alkaline Unfolded States of Staphylococcal Nuclease, **220**, 771–778.

Circular dichroism spectroscopy
Aggregation and Secondary Structure of Synthetic Amyloid βA4 Peptides of Alzheimer's Disease, **218**, 149–163.

Circumsporozoite
Multiple Display of Foreign Peptides on a Filamentous Bacteriophage. Peptides from *Plasmodium falciparum* Circumsporozoite Protein as Antigens, **220**, 821–827.

Citric acid cycle
Purification and Crystallization of Recombinant *Escherichia coli* Malate Dehydrogenase, **220**, 551–553.

Clam
Crystallization of a Complex of Hemoglobin Components II and III of the Symbiont-harboring Clam *Lucina pectinata*, **222**, 463–464.

Class I major histocompatibility proteins
Structure, Function and Properties of Antibody Binding Sites, **217**, 133–151.

Clathrin
The Observed Form of Coated Vesicles and a Mathematical Covering Problem, **218**, 485–488.

Cleavage and religation reaction
New Technique for Uncoupling the Cleavage and Religation Reactions of Eukaryotic Topoisomerase I. The Mode of Action of Camptothecin at a Specific Recognition Site, **222**, 669–678.

Cloned genes
Use of Bacteriophage T7 Lysozyme to Improve an Inducible T7 Expression System, **219**, 37–44.

Clupein Z
Nature of Protamine–DNA Complexes. A Special Type of Ligand Binding Co-operativity, **222**, 423–433.

Coagulation factor binding protein
Crystallization and Preliminary X-ray Study of Blood Coagulation Factor IX/Factor X-binding Protein with Anticoagulant Activity from Habu Snake Venom, **220**, 225–226.

Coat protein
Conformation and Mobility of the RNA-binding N-Terminal Part of the Intact Coat Protein of Cowpea Chlorotic Mottle Virus. A Two-dimensional Proton Nuclear Magnetic Resonance Study, **220**, 701–709.

Coat protein structure
Neutron Diffraction Studies of the Structure of Filamentous Bacteriophage Pf1. Demonstration that the Coat Protein Consists of a Pair of α-Helices with an Intervening, Non-helical Surface Loop, **220**, 359–379.

Coated vesicle
The Observed Form of Coated Vesicles and a Mathematical Covering Problem, **218**, 485–488.

Cobra
Preliminary Crystallographic Analysis of Cardiotoxin V with Major Fusion Activity from Taiwan Cobra (*Naja naja atra*) Venom, **219**, 591– 597.

Co-crystallize
DNA–Drug Interactions. The Crystal Structures of d(TGTACA) and d(TGATCA) Complexed with Daunomycin, **222**, 167–177.

Cocrystals
Crystallization and Preliminary X-ray Diffraction Studies of a MATα2–DNA Complex, **217**, 11–13.

Codon
Absolute *in Vivo* Translation Rates of Individual Codons in *Escherichia coli*. The Two Glutamic Acid Codons GAA and GAG Are Translated with a Threefold Difference in Rate, **222**, 265–280.

Codon context
tRNA Anticodons with the Modified Nucleoside 2-Methylthio-N^6-(4-hydroxyisopentenyl)adenosine Distinguish Between Bases 3′ of the Codon, **218**, 509–516.

Codon usage
Novel Anticodon Composition of Transfer RNAs in *Micrococcus luteus*, a Bacterium with a High Genomic G + C Content. Correlation with Codon Usage, **221**, 387–401.
An Apparent Rare-codon Effect on the Rate of Translation of a *Neurospora* Gene, **221**, 733–736.
Evidence for Horizontal Gene Transfer in *Escherichia coli* Speciation, **222**, 851–856.

Cohesive ends terminase
Structure of the Bacteriophage λ Cohesive End Site. Genetic Analysis of the Site (*cosN*) at which Nicks are Introduced by Terminase, **220**, 281–292.

Coiled coil
Fibrinogen Structure in Projection at 18 Å Resolution. Electron Density by Co-ordinated Cryo-electron Microscopy and X-ray Crystallography, **222**, 89–98.

Coiled coils
Point Mutations that Lock *Salmonella typhimurium* Flagellar Filaments in the Straight Right-handed and Left-handed Forms and their Relation to Filament Superhelicity, **220**, 79–88.

Coiled-coil assembly
Scanning Transmission Electron Microscopic Mass Determination of *in Vitro* Self-assembled Smooth Muscle Myosin Filaments, **222**, 455–458.

ColE1 Rom protein
Complexes Formed by Complementary RNA Stem-loops. Their Formations, Structures and Interaction with ColE1 Rom Protein, **220**, 831–842.

Colicin A
Fluorescence Energy Transfer Distance Measurements Using Site-directed Single Cysteine Mutants. The Membrane Insertion of Colicin A, **218**, 639–653.

Colicin uptake
Individual Domains of Colicins Confer Specificity in Colicin Uptake, in Pore-properties and in Immunity Requirement, **217**, 429–439.

Coliphage 434
Shared Operator Recognition Specificity between Trp Repressor and the Repressors of Bacteriophage 434, **217**, 599–602.

Collagen
Three-dimensional Spatial Relationship between the Collagen Fibrils and the Inorganic Calcium Phosphate Crystals of Pickerel (*Americanus americanus*) and Herring (*Clupea harengus*) Bone, **217**, 487–501.
Analysis of Structural Design Features in Collagen, **218**, 209–219.
Molecular Packing in Type I Collagen Fibrils. A Model with Neighbouring Collagen Molecules Aligned in Axial Register, **218**, 815–823.
Morphology of Sheet-like Assemblies of pN-collagen, pC-collagen and Procollagen Studied by Scanning Transmission Electron Microscopy Mass Measurements, **220**, 111–123.

Combinatorial libraries
By-passing Immunization. Human Antibodies from V-gene Libraries Displayed on Phage, **222**, 581–597.

Comparative study
Preliminary X-ray Diffraction Analysis of a Crystallizable Mutant of Malate Dehydrogenase from the Thermophile *Thermus flavus*, **221**, 383–385.

Complement
Crystallization and Preliminary X-ray Investigation of Factor D of Human Complement, **219**, 1–3.
Three-dimensional Structure of a Complement Control Protein Module in Solution, **219**, 717–725.
Solution Structure of Human and Mouse Immunoglobulin M by Synchrotron X-ray Scattering and Molecular Graphics Modelling. A Possible Mechanism for Complement Activation, **221**, 1345–1366.

Complementarity
Protein Docking and Complementarity, **221**, 327–346.

Complete relaxation matrix analysis
Solution Structure of $[d(GTATATAC)]_2$ *via* Restrained Molecular Dynamics Simulations with Nuclear Magnetic Resonance Constraints Derived from Relaxation Matrix Analysis of Two-dimensional Nuclear Overhauser Effect Experiments, **221**, 271–292.

Computer modeling
Computer Modeling 16 S Ribosomal RNA, **221**, 889–907.

Computer-prediction
Prediction of Human mRNA Donor and Acceptor Sites from the DNA Sequence, **220**, 49–65.

Conformation
Influence of Proline Residues on Protein Conformation, **218**, 397–412.
Molecular Basis for Co-operativity in Ca^{2+} Binding to Calbindin D_{9k}. ^1H Nuclear Magnetic Resonance Studies of $(Cd^{2+})_1$-Bovine Calbindin D_{9k}, **220**, 173–189.
Conformation and Mobility of the RNA-binding N-Terminal Part of the Intact Coat Protein of Cowpea Chlorotic Mottle Virus. A Two-dimensional Proton Nuclear Magnetic Resonance Study, **220**, 701–709.
Three-dimensional Model of *Escherichia coli* Ribosomal 5 S RNA as Deduced from Structure Probing in Solution and Computer Modeling, **221**, 293–308.

***A*-conformation**
Different Intrastrand and Interstrand Contributions to Stacking Account for Roll Variations at the Alternating Purine-Pyrimidine Sequences in *A*-DNA and *A*-RNA, **221**, 761–764.

Conformational analysis
β-Breakers: An Aperiodic Secondary Structure, **221**, 603–613.

Conformational change
Analysis of Protein Loop Closure. Two Types of Hinges Produce One Motion in Lactate Dehydrogenase, **220**, 133–149.
Crystal Structure of a Y35G Mutant of Bovine Pancreatic Trypsin Inhibitor, **220**, 757–770.

Conformational flexibility
Structure, Function and Properties of Antibody Binding Sites, **217**, 133–151.

Conformational transition
Comparison of the Solution Nuclear Magnetic Resonance and Crystal Structures of Interleukin-8. Possible Implications for the Mechanism of Receptor Binding, **217**, 611–620.
Crystal Structure Analysis of Oxidized *Pseudomonas aeruginosa* Azurin at pH 5·5 and pH 9·0. A pH-induced Conformational Transition Involves a Peptide Bond Flip, **221**, 765–772.

Consensus sequences
A Predictive Model for DNA Recognition by the Herpes Simplex Virus Protein ICP4, **219**, 451–470.

Constraints on evolution
Secondary Structure as a Constraint on the Evolution of a Plant Viral Satellite RNA, **221**, 1065–1069.

Context
Absolute *in Vivo* Translation Rates of Individual Codons in *Escherichia coli*. The Two Glutamic Acid Codons GAA and GAG Are Translated with a Threefold Difference in Rate, **222**, 265–280.

Context effects
Effects of the Nucleotide 3′ to an Amber Codon on Ribosomal Selection Rates of Suppressor tRNA and Release Factor-1, **219**, 231–241.

Contig
Mapping Using Unique Sequences, **217**, 259–264.

Co-operative activation
Regulation of Smooth Muscle Myosin Light Chain Kinase. Allosteric Effects and Co-operative Activation by Cal modulin, **220**, 947–957.

Co-operative DNA-binding
Co-operative Binding of the Glucocorticoid Receptor DNA Binding Domain is One of at Least Two Mechanisms for Synergism, **222**, 155–165.

Co-operative oxygen binding
Functional Role of the Distal Valine (E11) Residue of α Subunits in Human Haemoglobin, **218**, 761–767.
Site-directed Mutagenesis in Haemoglobin. Functional Role of Tyrosine-42(C7)α at the $\alpha1$–$\beta2$ Interface, **218**, 769–778.

Co-operativity
Molecular Basis for Co-operativity in Ca^{2+} Binding to Calbindin D_{9k}. ^1H Nuclear Magnetic Resonance Studies of $(Cd^{2+})_1$-Bovine Calbindin D_{9k}, **220**, 173–189.
Heterotropic Interactions in *Escherichia coli* Aspartate Transcarbamylase. Subunit Interfaces Involved in CTP Inhibition and ATP Activation, **220**, 789–799.

Copper
Preliminary Crystallographic Studies of Copper(II)-and Oxalate-substituted Human Lactoferrin, **219**, 155–159.

Copper protein
Crystal Structure Analysis of Oxidized *Pseudomonas aeruginosa* Azurin at pH 5·5 and pH 9·0. A pH-induced Conformational Transition Involves a Peptide Bond Flip, **221**, 765–772.

Core particle
Extended C-Terminal Tail of Wheat Histone H2A Interacts with DNA of the "Linker" Region, **218**, 805–813.

Coronavirus
Mutational Analysis of the RNA Pseudoknot Component of a Coronavirus Ribosomal Frameshifting Signal, **220**, 889–902.

Correlation averaging
Direct Determination of Myosin Filament Symmetry in Scallop Striated Adductor Muscle by Rapid Freezing and Freeze Substitution, **220**, 125–132.

Coumarins
Preliminary Crystallographic Analysis of the ATP-hydrolysing Domain of the *Escherichia coli* DNA Gyrase B Protein, **217**, 15–17.

Coupling constants
Accurate Measurements of Coupling Constants from Two-dimensional Nuclear Magnetic Resonance Spectra of Proteins and Determination of ϕ-Angles, **217**, 731–736.

C-peptide helix
Position Effect on Apparent Helical Propensities in the C-peptide Helix, **221**, 1395–1401.

CpG island
Differentiation-dependent Alteration in the Chromatin Structure of Chromosomal Protein HMG-17 Gene During Erythropoiesis, **217**, 75–84.

CpG islands
Sequence and Comparative Analysis of the Rabbit α-Like Globin Gene Cluster Reveals a Rapid Mode of Evolution in a G + C-rich Region of Mammalian Genomes, **222**, 233–249.

CpG sequence
Molecular Structure of a Complete Turn of *A*-DNA, **221**, 623–635.

Critical concentration
Lithium Increases Actin Polymerization Rates by Enhancing the Nucleation Step, **217**, 401–404.

Critical residues
Systematic Mutation of Bacteriophage T4 Lysozyme, **222**, 67–87.

cro
Spectroscopic Studies on *λcro* Protein–DNA Interactions, **219**, 733–746.

Cross-linking
Behavior of a Cross-linked Attachment Site: Testing the Role of Branch Migration in Site-specific Recombination, **220**, 621–629.

CRP
AraC–DNA Looping: Orientation and Distance-dependent Loop Breaking by the Cyclic AMP Receptor Protein, **218**, 45–54.
Molecular and Functional Characterization of a Carbon Starvation Gene of *Escherichia coli*, **218**, 129–140.
An *Escherichia coli rpoB* Mutation that Inhibits Transcription of Catabolite-sensitive Operons, **222**, 189–196.

Cruciforms
Torsionally Tuned Cruciform and *Z*-DNA Probes for Measuring Unrestrained Supercoiling at Specific Sites in DNA of Living Cells, **221**, 107–129.

Cryo-biocrystallography
Characterization and Preliminary Attempts for Derivatization of Crystals of Large Ribosomal Subunits from *Haloarcula marismortui* Diffracting to 3 Å Resolution, **222**, 11–15.

Cryo-electron microscopy
High-resolution Electron Crystallography of Light-harvesting Chlorophyll *a*/*b*-Protein Complex in Three Different Media, **217**, 691–699.

Cryoelectron microscopy
A Molecular Switch: Subunit Rotations Involved in the Right-handed to Left-handed Transitions of *Salmonella typhimurium* Flagellar Filaments, **220**, 67–77.
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interactions with RNA. I. Cryoelectron Microscopic Studies, **221**, 1127–1138.

Cryo-electron microscopy
Fibrinogen Structure in Projection at 18 Å Resolution. Electron Density by Co-ordinated Cryo-electron Microscopy and X-ray Crystallography, **222**, 89–98.

Crystal
Crystallization and Preliminary X-ray Analysis of an Intact Soluble-form Variant Surface Glycoprotein from the African Trypanosome, *Trypanosoma brucei*, **218**, 679–683.

Crystal order
Use of Chemical Modification in the Crystallization of Isocitrate Lyase from *Escherichia coli*, **220**, 13–16.

Crystal structure
Co-crystals of Gramicidin A and Phospholipid. A System for Studying the Structure of a Transmembrane Channel, **217**, 625–627.
Refined Crystal Structure of β-Lactamase from *Staphylococcus aureus* PC1 at 2·0 Å Resolution, **217**, 701–719.
X-ray Crystal Structure of the Two Site-specific Mutants His35Gln and His35Leu of Azurin from *Pseudomonas aeruginosa*, **218**, 427–447.
Reaction Mechanism of Alkaline Phosphatase Based on Crystal Structures. Two-metal Ion Catalysis, **218**, 449–464.
Crystal Structure of Cleaved Human α_1-Antichymotrypsin at 2·7 Å Resolution and its Comparison with other Separins, **218**, 595–606.
Refined Structure of the Human Histocompatibility Antigen HLA-A2 at 2·6 Å Resolution, **219**, 277–319.
Crystal Structure of Cholesterol Oxidase from *Brevibacterium sterolicum* Refined at 1·8 Å Resolution, **219**, 533–554.
Refined Crystal Structure of Ferredoxin II from *Desulfovibrio gigas* at 1·7 Å, **219**, 693–715.
Crystal Structure of a Y35G Mutant of Bovine Pancreatic Trypsin Inhibitor, **220**, 757–770.
Refined 1·83 Å Structure of Trypanosomal Triosephosphate Isomerase Crystallized in the Presence of 2·4 M-Ammonium Sulphate. A Comparison with the tr Structure of the Trypanosomal Triosephosphate Isomerase–Glycerol-3-phosphate Complex, **220**, 995–1015.
2·9 Å Resolution Structure of an Anti-dinitrophenyl-spin-label Monoclonal Antibody Fab Fragment with Bound Hapten, **221**, 239–256.
Refined Crystal Structure of the Complex of Subtilisin BPN′ and *Streptomyces* Subtilisin Inhibitor at 1·8 Å Resolution, **221**, 309–325.
Crystal Structure of Human α-Lactalbumin at 1·7 Å Resolution, **221**, 571–581.
Crystal Structure of Uncleaved Ovalbumin at 1·95 Å Resolution, **221**, 941–959.

Crystal structure determination
Structural Mechanism for Glycogen Phosphorylase Control by Phosphorylation and AMP, **218**, 233–260.
Refined Structure of Porcine Pepsinogen at 1·8 Å Resolution, **219**, 671–692.

Crystal structures
Refined Crystal Structures of Subtilisin Novo in Complex with Wild-type and Two Mutant Eglins. Comparison with Other Serine Proteinase Inhibitor Complexes, **217**, 353–371.

β,γ-crystallins
High Resolution Structure of an Oligomeric Eye Lens β-Crystallin. Loops, Arches, Linkers and Interfaces in βB2 Dimer Compared to a Monomeric γ-Crystallin, **222**, 1067–1083.

Crystallization
Preliminary Crystallographic Analysis of the ATP-hydrolysing Domain of the *Escherichia coli* DNA Gyrase B Protein, **217**, 15–17.
Many Crystal Forms of Human Immunodeficiency Virus Reverse Transcriptase, **217**, 19–22.
Crystallization of Complexes of *Eco*RV Endonuclease with Cognate and Non-cognate DNA Fragments, **217**, 235–238.
Crystallization and Preliminary X-ray Diffraction Studies of Nucleoside Diphosphate Kinase from *Dictyostelium discoideum*, **217**, 239–240.
Crystallization and Preliminary Analysis of Telokin, the C-Terminal Domain of Myosin Light Chain Kinase, **217**, 621–623.
Preliminary Crystallographic Study of a Pseudoazurin from Methylotrophic Bacterium, *Methylobacterium extorquens* AM1, **218**, 19–20.
Crystallization and Preliminary Crystallographic Study of Cathepsin D Inhibitor from Potatoes, **218**, 21–22.
Crystallization and Preliminary X-ray Diffraction Studies of the Human Erythrocyte Bisphosphoglycerate Mutase, **218**, 269–270.
Crystals of *Anabaena* PCC 7119 Ferredoxin-NADP $^+$ Reductase, **218**, 271–272.
Crystallization and Preliminary Characterization of Mitogillin, a Ribosomal Ribonuclease from *Aspergillus restrictus*, **218**, 489–492.
Preliminary X-ray Crystallographic Analysis of a Modified Basic Fibroblast Growth Factor, **218**, 493–494.
Trigonal Crystals of Porin from *Escherichia coli*, **218**, 505–507.
Crystallization and Preliminary X-ray Investigation of Recombinant Human Interleukin 4, **218**, 675–678.
Crystallization and X-ray Diffraction Studies of a Soluble Form of Human Transferrin Receptor, **218**, 685–689.
Purification, Crystallization and Preliminary Crystallographic Analysis of Porcine Aldose Reductase, **218**, 695–698.
Crystallization of and Preliminary X-ray Data for the Mouse Major Urinary Protein and Rat α-2u Globulin, **218**, 699–701.
Crystallization and Preliminary X-ray Investigation of Factor D of Human Complement, **219**, 1–3.
Preparation of Human Manganese Superoxide Dismutase by Tri-phase Partitioning and Preliminary Crystallographic Data, **219**, 103–108.
Crystallization and Preliminary Diffraction Studies of 5 S rRNA from the Thermophilic Bacterium *Thermus flavus*, **219**, 399–402.
Crystallization of the Calcium-activated Phosphoenolpyruvate Carboxykinase from *Escherichia coli* K12, **219**, 593–594.
Crystallization and Characterization of the High Molecular Weight Form of Nerve Growth Factor (7 S NGF), **219**, 595–601.
Crystallization and Preliminary X-ray Study of a Double-Shelled Spherical Virus, Rice Dwarf Virus, **219**, 665–669.
Crystallization and Preliminary X-ray Diffraction Analysis of Nucleoside Diphosphate Kinase from *Myxococcus xanthus*, **220**, 5–7.
Molecular Size and Symmetry of *Pseudomonas aeruginosa* Catabolic Ornithine Carbamoyltransferase. An X-ray Crystallography Analysis, **220**, 9–12.
Crystallization and Preliminary Crystallographic Analysis of Carboxypeptidase G_2 from *Pseudomonas* sp. Strain RS-16, **220**, 17–18.
Crystallization Studies of cAMP-dependent Protein Kinase. Cocrystals of the Catalytic Subunit with a 20 Amino Acid Residue Peptide Inhibitor and MgATP Diffract to 3·0 Å Resolution, **220**, 217–220.
Crystallization of a Photosensitive Nitrile Hydratase from *Rhodococcus* sp. N-771, **220**, 221–222.
Crystallization and Preliminary X-ray Study of Blood Coagulation Factor IX/Factor X-binding Protein with Anticoagulant Activity from Habu Snake Venom, **220**, 225–226.
Multiple Crystal Forms of Lipases from *Geotrichum candidum*, **220**, 541–543.
Crystallization and Preliminary X-ray Analysis of Gc, the Vitamin D-binding Protein in Serum, **220**, 545–547.
Crystallization and Preliminary X-ray Crystallographic Studies of CO-hemoglobin from the North Atlantic Salmon (*Salmo salar*), **220**, 829–830.
Crystallization and Preliminary X-ray Data of Bromoperoxidase from *Streptomyces aureofaciens* ATCC 10762, **221**, 35–37.
Low-resolution Structure of Recombinant Human Granulocyte–Macrophage Colony Stimulating Factor, **221**, 55–60.
New Crystal Form of Cytosolic Chicken Asparate Aminotransferase Suitable for High-resolution X-ray Analysis, **221**, 61–63.
Crystals of Intact Elongation Factor Tu from *Thermus thermophilus* Diffracting to High Resolution, **221**, 375–377.
Crystallization and Preliminary X-ray Crystallographic Studies of Bovine Heart Mitochondrial Cytochrome bc_1 Complex, **221**, 379–382.
Preliminary X-ray Diffraction Analysis of a Crystallizable Mutant of Malate Dehydrogenase from the Thermophile *Thermus flavus*, **221**, 383–385.
Biochemical Implications from the Variable Gene Sequences of an Anti-cytochrome *c* Antibody and Crystallographic Characterization of its Antigen-binding Fragment in Free and Antigen-complexed Forms, **221**, 455–462.
Crystallization and Preliminary X-ray Crystallographic Analysis of Verotoxin-1 B-subunit, **221**, 729–731.
Crystallization and Preliminary X-ray Investigation of a Sarcoplasmic Calcium-binding Protein from Amphioxus, **221**, 1071–1073.
Crystallization and Crystal Packing of *Proteus mirabilis* PR Catalase, **221**, 1075–1077.
Crystallization and Preliminary X-ray Diffraction Studies of the Spinach-chloroplast Thioredoxin f, **222**, 459–461.
Crystallization of a Complex of Hemoglobin Components II and III of the Symbiont-harboring Clam *Lucina pectinata*, **222**, 463–464.
Crystallization of Diphtheria Toxin, **222**, 861–864.
Crystals of the Complex between Human Growth Hormone and the Extracellular Domain of Its Receptor, **222**, 865–868.
Crystallization and Preliminary X-ray Diffraction Studies of Dialkylglycine Decarboxylase, A Decarboxylating Transaminase, **222**, 873–875.
Crystallization and Preliminary X-ray Analysis of Phosphoporin from the Outer Membrane of *Escherichia coli*, **222**, 881–884.

2-D crystallization
Sub-domain Structure of Lipid-bound Annexin-V Resolved by Electron Image Analysis, **217**, 241–245.

Crystallization in polyethylene glycol
Crystallization and Preliminary X-ray Analysis of Phenylalanine Hydroxylase from Rat Liver, **218**, 495–498.

Crystallographic parameter
Crystallization of a Photosensitive Nitrile Hydratase from *Rhodococcus* sp. N-771, **220**, 221–222.

Crystallographic study
Preliminary Crystallographic Studies of Copper(II)-and Oxalate-substituted Human Lactoferrin, **219**, 155–159.

Crystallography
Crystallization and Preliminary X-ray Diffraction Studies of Nucleoside Diphosphate Kinase from *Dictyostelium discoideum*, **217**, 239–240.
Preliminary X-ray Crystallographic Analysis of a Modified Basic Fibroblast Growth Factor, **218**, 493–494.

Structures of Deoxy and Oxy Hemerythrin at 2·0 Å Resolution, **218**, 583–593.
Crystallization of Human Thymidylate Synthase, **219**, 161–163.
Structure of Soluble and Membrane-bound Human Annexin V, **220**, 199–203.
Structures of Met and Azidomet Hemerythrin at 1·66 Å Resolution, **220**, 723–737.
Cumulative Site-directed Charge–Change Replacements in Bacteriophage T4 Lysozyme Suggest that Long-range Electrostatic Interactions Contribute Little to Protein Stability, **221**, 873–887.
Crystallization and Preliminary Crystallographic Analysis of a Novel Nuclease from *Serratia marcescens*, **222**, 27–30.
Crystallization and Preliminary Crystallographic Study of Glucose Dehydrogenase from the Archaebacterium *Thermoplasma acidophilum*, **222**, 143–144.

Crystallography of protein H
Crystallographic Data for H-Protein from the Glycine Decarboxylase Complex, **220**, 223–224.

Crystal-packing
Crystallization and Crystal Packing of *Proteus mirabilis* PR Catalase, **221**, 1075–1077.

Crystals
Crystallization and Preliminary X-ray Analysis of Phenylalanine Hydroxylase from Rat Liver, **218**, 495–498.
Crystallization of the B Chain of Shiga-like Toxin I from *Escherichia coli*, **218**, 691–694.
Preliminary Crystallographic Analysis of Cardiotoxin V with Major Fusion Activity from Taiwan Cobra (*Naja naja atra*) Venom, **219**, 591–597.
Crystals of Protein S6 from the 30 S Ribosomal Subunit of *Thermus thermophilus*, **220**, 549–550.
Crystallographic Analysis of the Neurophysin–Oxytocin Complex. A Preliminary Report, **221**, 43–45.
Crystals of a Bovine Neurophysin II Tripeptide Complex, **222**, 23–25.
Characterization of Crystals of An Fab Fragment of a Murine Monoclonal Antibody, **222**, 445–446.
Crystallization and Preliminary X-ray Analysis of the Lactose-specific Phosphocarrier Protein IIA^{lac} of the Phosphoenolpyruvate : Sugar Phosphotransferase System from *Staphylococcus aureus*, **222**, 857–859.
Crystallization and Preliminary X-ray Analysis of Botulinum Neurotoxin Type A, **222**, 877–880.

Crystals of porin
Crystals of an Integral Membrane Protein Diffracting to 1·8 Å Resolution, **217**, 9–10.

Cube representation of molecular surface
"Soft Docking": Matching of Molecular Surface Cubes, **219**, 79–102.

Cucumber basic protein
Three-dimensional Model for Stellacyanin, a "Blue" Copper-protein, **222**, 1053–1065.

Cucumber mosaic virus
Secondary Structure as a Constraint on the Evolution of a Plant Viral Satellite RNA, **221**, 1065–1069.

Curved DNA
A Study of Electrophoretic Mobility of DNA in Agarose and Polyacrylamide Gels, **221**, 981–1005.

Cyanobacterium
Crystals of *Anabaena* PCC 7119 Ferredoxin-$NADP^+$ Reductase, **218**, 271–272.

Cyclic AMP
CAP and Nag Repressor Binding to the Regulatory Regions of the *nagE-B* and *manX* Genes of *Escherichia coli*, **217**, 661–679.
Molecular and Functional Characterization of a Carbon Starvation Gene of *Escherichia coli*, **218**, 129–140.

Cyclodextrin glycosyltransferase
Structure of Cyclodextrin Glycosyltransferase Refined at 2·0 Å Resolution, **217**, 737–750.

Cysteic acid
Structure of NADH Peroxidase from *Streptococcus faecalis* 10C1 Refined at 2·16 Å Resolution, **221**, 1325–1344.

Cysteine conservation
Variant Specific Glycoprotein of *Trypanosoma brucei* Consists of Two Domains each Having an Independently Conserved Pattern of Cysteine Residues, **221**, 823–835.

Cysteine periodicity
Cysteine Residue Periodicity is a Conserved Structural Feature of Variable Surface Proteins from *Paramecium tetraurelia*, **222**, 835–841.

Cysteine thiolate ligands
Refined Crystal Structure of Cd, Zn Metallothionein at 2·0 Å Resolution, **221**, 1269–1293.

Cysteine-rich protein
Cysteine Residue Periodicity is a Conserved Structural Feature of Variable Surface Proteins from *Paramecium tetraurelia*, **222**, 835–841.

Cytochrome *b*
Incipient Mitochondrial Evolution in Yeasts. II. The Complete Sequence of the Gene Coding for Cytochrome *b* in *Saccharomyces douglasii* Reveals the Presence of Both New and Conserved Introns and Disclosed Major Differences in the Fixation of Mutations in Evolution, **218**, 747–760.

Cytochrome b_5
Mapping Electrostatic Interactions in Macromolecular Associations, **221**, 1453–1460.

Cytochrome bc_1 complex
Crystallization and Preliminary X-ray Crystallographic Studies of Bovine Heart Mitochondrial Cytochrome bc_1 Complex, **221**, 379–382.

Cytochrome *c*
Temperature-sensitive Variants of *Saccharomyces cerevisiae* Iso-1-cytochrome *c* Produced by Random Mutagenesis of Codons 43 to 54, **221**, 97–105.
Stable Submolecular Folding Units in a Non-compact Form of Cytochrome *c*, **221**, 1045–1061.
Mapping Electrostatic Interactions in Macromolecular Associations, **221**, 1453–1460.
Role of Electrostatic Repulsion in the Acidic Molten Globule of Cytochrome *c*, **222**, 679–686.

Cytochrome *c*–antibody complex
Biochemical Implications from the Variable Gene Sequences of an Anti-cytochrome *c* Antibody and Crystallographic Characterization of its Antigen-binding Fragment in Free and Antigen-complexed Forms, **221**, 455–462.

Cytochromes
Molecular Structure of Cytochrome c_2 Isolated from *Rhodobacter capsulatus* Determined at 2·5 Å Resolution, **220**, 673–685.
Mitochondrial-like DNA Sequences Flanked by Direct and Inverted Repeats in the Nuclear Genome of *Toxoplasma gondii*, **222**, 525–536.

Cytokine
Crystallization and Preliminary X-ray Investigation of Recombinant Human Interleukin 4, **218**, 675–678.

Cytokinin
Crystallization and Preliminary X-ray Analysis of Peanut Agglutinin–N^6-benzylaminopurine Complex, **219**, 151–153.

Cytoplasm
Characterization of the Cytoplasm of *Escherichia coli* K-12 as a Function of External Osmolarity. Implications for Protein–DNA Interactions *in Vivo*, **222**, 281–300.
Estimation of Macromolecule Concentrations and Excluded Volume Effects for the Cytoplasm of *Escherichia coli*, **222**, 599–620.

Cytotoxic
Structure and Evolution of the Cytotoxic Cell Proteinase Genes CCP3, CCP4 and CCP5, **220**, 867–875.

Cytotoxin
Crystallization and Preliminary Characterization of Mitogillin, a Ribosomal Ribonuclease from *Aspergillus restrictus*, **218**, 489–492.

Damage recognition
Identification of the Different Intermediates in the Interaction of (A)BC Excinuclease with its Substrates by DNase I Footprinting on two Uniquely Modified Oligonucleotides, **219**, 27–36.
Initiation of the UvrABC Nuclease Cleavage Reaction. Efficiency of Incision is not Correlated with UvrA Binding Affinity, **220**, 19–33.

Daunomycin
DNA–Drug Interactions. The Crystal Structures of d(TGTACA) and d(TGATCA) Complexed with Daunomycin, **222**, 167–177.

Decamer/dodecamer comparisons
Analysis of Local Helix Geometry in Three *B*-DNA Decamers and Eight Dodecamers, **217**, 201–214.

Decarboxylation
Crystallization and Preliminary X-ray Diffraction Studies of Dialkylglycine Decarboxylase, A Decarboxylating Transaminase, **222**, 873–875.

Dehydrogenase
Purification and Crystallization of Recombinant *Escherichia coli* Malate Dehydrogenase, **220**, 551–553.
Three-dimensional Structure of a Highly Thermostable Enzyme, 3-Isopropylmalate Dehydrogenase of *Thermus thermophilus* at 2·2 Å Resolution, **222**, 725–738.

Deletion
An *in Vitro* Approach to Identifying Specificity Determinants of Mutagenesis Mediated by DNA Misalignments, **221**, 805–821.

Deletion mutant
Identification of a Subunit Assembly Domain in the Alpha Subunit of *Escherichia coli* RNA Polymerase, **218**, 1–6.
Functional Specialization within the α-Subunit of *Escherichia coli* RNA Polymerase, **221**, 23–29.

Deletion mutants
Informational Redundancy of $tRNA_4^{Ser}$ and $tRNA_7^{Ser}$ Genes in *Drosophila melanogaster* and Evidence for Intergenic Recombination, **219**, 175–188.

Deoxycytidylate deaminase
Mutational Specificity of DNA Precursor Pool Imbalances in Yeast Arising from Deoxycytidylate Deaminase Deficiency or Treatment with Thymidylate, **220**, 933–946.

Deoxyribonuclease I
DNase I-induced DNA Conformation. 2 Å Structure of a DNase I–Octamer Complex, **222**, 645–667.

Deoxyribonucleotides
Mutational Specificity of DNA Precursor Pool Imbalances in Yeast Arising from Deoxycytidylate Deaminase Deficiency or Treatment with Thymidylate, **220**, 933–946.

Designed protein variants
Three-dimensional Structure of the Complexes between Bovine Chymotrypsinogen A and Two Recombinant Variants of Human Pancreatic Secretory Trypsin Inhibitor (Kazal-type), **220**, 711–722.

Desulfovibrio
Refined Crystal Structure of Ferredoxin II from *Desulfovibrio gigas* at 1·7 Å, **219**, 693–715.

Deuteration
Spatial Arrangement of σ-Factor and Core Enzyme of *Escherichia coli* RNA Polymerase. A Neutron Solution Scattering Study, **219**, 747–755.

Development
Sporulation Operon *spoIVF* and the Characterization of Mutations that Uncouple Mother-cell from Forespore Gene Expression in *Bacillus subtilis*, **221**, 1237–1256.

DI genomes
On the Nature of Spontaneous RNA Synthesis by Qβ Replicase, **222**, 3–9.

Dictyostelium discoideum
Crystallization and Preliminary X-ray Diffraction Studies of Nucleoside Diphosphate Kinase from *Dictyostelium discoideum*, **217**, 239–240.
Transfer RNA Genes from *Dictyostelium discoideum* are Frequently Associated with Repetitive Elements and Contain Consensus Boxes in their 5′-and 3′-Flanking Regions, **222**, 537–552.

Dielectric susceptibility
Intramolecular Dielectric Screening in Proteins, **218**, 859–886.

Differential scanning calorimetry
Molecular Basis of Co-operativity in Protein Folding, **222**, 687–698.

Differentiation
Differentiation-dependent Alteration in the Chromatin Structure of Chromosomal Protein HMG-17 Gene During Erythropoiesis, **217**, 75–84.
Regulation of Histone $H1^0$ Accumulation During Induced Differentiation of Murine Erythroleukemia Cells, **217**, 85–92.

Diffraction
Crystallization and Preliminary Analysis of Telokin, the C-Terminal Domain of Myosin Light Chain Kinase, **217**, 621–623.
Purification, Crystallization and Preliminary Crystallographic Analysis of Porcine Aldose Reductase, **218**, 695–698.
Location of Ion-binding Sites in the Gramicidin Channel by X-ray Diffraction, **218**, 847–858.
Crystallization and Preliminary X-ray Investigation of Factor D of Human Complement, **219**, 1–3.

Dimer
Manganese Superoxide Dismutase from *Thermus thermophilus*. A Structural Model Refined at 1·8 Å Resolution, **219**, 335–358.

2,3-diphosphoglycerate
Crystallization and Preliminary X-ray Diffraction Studies of the Human Erythrocyte Bisphosphoglycerate Mutase, **218**, 269–270.

Diphtheria toxin
Crystallization of Diphtheria Toxin, **222**, 861–864.

Direct methods
Refined Crystal Structure of Cd, Zn Metallothionein at 2·0 Å Resolution, **221**, 1269–1293.

Direct/inverted repeats
Mitochondrial-like DNA Sequences Flanked by Direct and Inverted Repeats in the Nuclear Genome of *Toxoplasma gondii*, **222**, 525–536.

Directional mutation pressure
Novel Anticodon Composition of Transfer RNAs in *Micrococcus luteus*, a Bacterium with a High Genomic G + C Content. Correlation with Codon Usage, **221**, 387–401.

Disorder
Angular Disorder in Actin: Is It Consistent with General Principles of Protein Structure?, **217**, 405–408.
Structure of Bovine Prothrombin Fragment 1 Refined at 2·25 Å Resolution, **220**, 481–494.

Dissociation rate constant
Lithium Increases Actin Polymerization Rates by Enhancing the Nucleation Step, **217**, 401–404.

Distal histidine
Proton Nuclear Magnetic Resonance Study of the Solution Distal Histidine Orientation in Monomeric *Chironomus thummi thummi* Cyanomet Hemoglobins. Dynamic Stability of the Heme Pocket as Monitored by Labile Proton Exchange, **221**, 1015–1026.

Distal residue
Functional Role of the Distal Valine (E11) Residue of α Subunits in Human Haemoglobin, **218**, 761–767.

Distance geometry
A New Method for Building Protein Conformations from Sequence Alignments with Homologues of Known Structure, **217**, 1–7.
Efficient Computation of Three-dimensional Protein Structures in Solution from Nuclear Magnetic Resonance Data Using the Program DIANA and the Supporting Programs CALIBA, HABAS and GLOMSA, **217**, 517–530.
Structure Determination of the *Antp(C39→S)* Homeodomain from Nuclear Magnetic Resonance Data in Solution using a Novel Strategy for the Structure Calculation with the Programs DIANA, CALIBA, HABAS and GLOMSA, **217**, 531–540.
Computer Modeling 16 S Ribosomal RNA, **221**, 889–907.
Sequence-specific ^{1}H n.m.r. Assignments and Determination of the Three-dimensional Structure of Reduced *Escherichia coli* Glutaredoxin, **221**, 1311–1324.

Disulphide bonds
Is the Hydrophobic Effect Stabilizing or Destabilizing in Proteins? The Contribution of Disulphide Bonds to Protein Stability, **217**, 389–398.
(14–38, 30–51) Double-disulphide Intermediate in Folding of Bovine Pancreatic Trypsin Inhibitor: A Two-dimensional ^{1}H Nuclear Magnetic Resonance, **222**, 353–371.
Two-dimensional ^{1}H Nuclear Magnetic Resonance Study of the (5–55) Single-disulphide Folding Intermediate of Bovine Pancreatic Trypsin Inhibitor, **222**, 373–390.

DNA
Monomers of the *Escherichia coli* SSB-1 Mutant Protein Bind Single-stranded DNA, **217**, 63–74.
Computer Simulation of DNA Supercoiling, **217**, 413–419.
Supramolecular Organization of Double-stranded DNA Molecules in the Columnar Hexagonal Liquid Crystalline Phase. An Electron Microscopic Analysis Using Freeze-fracture Methods, **218**, 165–181.
Are Time-averaged Restraints Necessary for Nuclear Magnetic Resonance Refinement? A Model Study for DNA, **220**, 457–479.
DNA–Drug Interactions. The Crystal Structures of d(TGTACA) and d(TGATCA) Complexed with Daunomycin, **222**, 167–177.

***A*-DNA**
Molecular Structure of a Complete Turn of *A*-DNA, **221**, 623–635.

DNA annealing
RecA-mediated Annealing of Single-stranded DNA and Its Relation to the Mechanism of Homologous Recombination, **221**, 131–145.

***B*-DNA**
^{1}H and ^{31}P Nuclear Magnetic Resonance Studies of Spermine Binding to the *Z*-DNA form of $d(m^5CGm^5CGm^5CG)_2$. Evidence for Decreased Spermine Mobility, **219**, 585–590.

DNA base tetrads
Analysis of Local Helix Geometry in Three *B*-DNA Decamers and Eight Dodecamers, **217**, 201–214.

DNA bending
Drosophila Topoisomerase II–DNA Interactions are Affected by DNA Structure, **217**, 53–62.
Tyr60 Variants of Flp Recombinase Generate Conformationally Altered Protein–DNA Complexes. Differential Activity in Full-site and Half-site Recombinations, **218**, 107–118.
Catabolite Activator Protein-induced DNA Bending in Transcription Initiation, **219**, 201–215.
Synthetic DNA Bending Sequences Increase the Rate of *in Vitro* Transcription Initiation at the *Escherichia coli lac* Promoter, **219**, 217–230.
Transcription Activation at a Distance by Phage ϕ29 Protein p4. Effect of Bent and Non-bent Intervening DNA Sequences, **219**, 403–414.

DNA binding
Circular Dichroism and Fluorescence Analysis of the Interaction of Pf1 Gene *5* Protein with Poly(dT), **217**, 681–689.
Mutations in the Inverted Repeats of Tn*3* Affect Binding of Transposase and Transposition Immunity, **218**, 335–347.
NFY or a Related CCAAT Binding Factor Can Be Replaced by Other Transcriptional Activators for Cooperation with HNF1 in Driving the Rat Albumin Promoter *in Vivo*, **222**, 31–43.

DNA binding protein
Two MalT Binding Sites in Direct Repeat. A Structural Motif Involved in the Activation of All the Promoters of the Maltose Regulons in *Escherichia coli* and *Klebsiella pneumoniae*, **218**, 323–334.
Escherichia coli Transcription Factor That Both Activates Fatty Acid Synthesis and Represses Fatty Acid Degradation, **222**, 843–849.

DNA cleavage
Drosophila Topoisomerase II–DNA Interactions are Affected by DNA Structure, **217**, 53–62.

DNA condensation
Groove–Backbone Interaction in *B*-DNA. Implication for DNA Condensation and Recombination, **221**, 919–940.

DNA conformation
The Phage 434 Cro/O_R1 Complex at 2·5 Å Resolution, **219**, 321–334.

DNA decamers
Structure of *B*-DNA Decamer C-C-A-A-C-G-T-T-G-G and Comparison with Isomorphous Decamers C-C-A-A-G-A-T-T-G-G and C-C-A-G-G-C-C-T-G-G, **217**, 177–199.

DNA deletions
Deletions Induced by Gamma Rays in the Genome of *Escherichia coli*, **220**, 193–198.

DNA flexibility
DNase I-induced DNA Conformation. 2 Å Structure of a DNase I–Octamer Complex, **222**, 645–667.

DNA gyrase
Preliminary Crystallographic Analysis of the ATP-hydrolysing Domain of the *Escherichia coli* DNA Gyrase B Protein, **217**, 15–17.

DNA injection
The Last Duplex Base-pair of the Phage λ Chromosome. Involvement in Packaging, Ejection and Routing of λ DNA, **220**, 293–306.

DNA ligand binding models
Nature of Protamine–DNA Complexes. A Special Type of Ligand Binding Co-operativity, **222**, 423–433.

DNA Loop
AraC–DNA Looping: Orientation and Distance-dependent Loop Breaking by the Cyclic AMP Receptor Protein, **218**, 45–54.

DNA looping
Drosophila Topoisomerase II–DNA Interactions are Affected by DNA Structure, **217**, 53–62.
CAP and Nag Repressor Binding to the Regulatory Regions of the *nagE-B* and *manX* Genes of *Escherichia coli*, **217**, 661–679.
Transcription Activation at a Distance by Phage ϕ29 Protein p4. Effect of Bent and Non-bent Intervening DNA Sequences, **219**, 403–414.

DNA Looping
DNA Looping Alters Local Conformation during Transcription, **219**, 615–622.

DNA methylation
The Recognition of Unusual DNA Structures by Human DNA(cytosine-5)methyltransferase, **217**, 39–51.
Mutations that Confer *de Novo* Activity upon a Maintenance Methyltransferase, **221**, 431–440.

DNA packaging
Structure of the Bacteriophage λ Cohesive End Site. Genetic Analysis of the Site (*cosN*) at which Nicks are Introduced by Terminase, **220**, 281–292.
The Last Duplex Base-pair of the Phage λ Chromosome. Involvement in Packaging, Ejection and Routing of λ DNA, **220**, 293–306.

DNA polymerase
Mutational Specificity of the *dnaE173* Mutator Associated with a Defect in the Catalytic Subunit of DNA Polymerase III of *Escherichia coli*, **222**, 925–936.

DNA polymerase δ
Characterization of the *POL3* Gene Product from *Schizosaccharomyces pombe* Indicates Inter-species Conservation of the Catalytic Subunit of DNA Polymerase δ, **222**, 209–218.

DNA probes
Systematic Identification of LINE-1 Repetitive DNA Sequence Differences Having Species Specificity Between *Mus spretus* and *Mus domesticus*, **219**, 635–643.

DNA recognition
The Recognition of Unusual DNA Structures by Human DNA(cytosine-5)methyltransferase, **217**, 39–51.
The Phage 434 Cro/O_R1 Complex at 2·5 Å Resolution, **219**, 321–334.

DNA recombination
Groove–Backbone Interaction in *B*-DNA. Implication for DNA Condensation and Recombination, **221**, 919–940.

DNA repair
Initiation of the UvrABC Nuclease Cleavage Reaction. Efficiency of Incision is not Correlated with UvrA Binding Affinity, **220**, 19–33.
Stable Ester Conjugate between the *Saccharomyces cerevisiae* RAD6 Protein and Ubiquitin Has no Biological Activity, **221**, 745–749.

DNA replication
Analysis of Polyomavirus Enhancer-Effect on DNA Replication and Early Gene Expression, **218**, 479–483.
Transcriptional Organization of the *Escherichia coli dnaX* Gene, **220**, 649–658.
Characterization of the *POL3* Gene Product from *Schizosaccharomyces pombe* Indicates Inter-species Conservation of the Catalytic Subunit of DNA Polymerase δ, **222**, 209–218.
Mutational Specificity of the *dnaE173* Mutator Associated with a Defect in the Catalytic Subunit of DNA Polymerase III of *Escherichia coli*, **222**, 925–936.
Analysis of Replicative Intermediates Produced during Bacteriophage φ29 DNA Replication *in Vitro*, **222**, 983–994.

DNA replication fidelity
An *in Vitro* Approach to Identifying Specificity Determinants of Mutagenesis Mediated by DNA Misalignments, **221**, 805–821.

DNA replication origins
Deletions Induced by Gamma Rays in the Genome of *Escherichia coli*, **220**, 193–198.

DNA routing
The Last Duplex Base-pair of the Phage λ Chromosome. Involvement in Packaging, Ejection and Routing of λ DNA, **220**, 293–306.

DNA sequence
DNA Sequence of the Filamentous Bacteriophage Pf1, **218**, 349–364.

DNA sequence alignments
Sequence and Comparative Analysis of the Rabbit α-Like Globin Gene Cluster Reveals a Rapid Mode of Evolution in a G + C-rich Region of Mammalian Genomes, **222**, 233–249.

DNA sequence and structure
Structure of *B*-DNA Decamer C-C-A-A-C-G-T-T-G-G and Comparison with Isomorphous Decamers C-C-A-A-G-A-T-T-G-G and C-C-A-G-G-C-C-T-G-G, **217**, 177–199.
Analysis of Local Helix Geometry in Three *B*-DNA Decamers and Eight Dodecamers, **217**, 201–214.

DNA sequence databases
Identifying Potential tRNA Genes in Genomic DNA Sequences, **220**, 659–671.

DNA structure
The Recognition of Unusual DNA Structures by Human DNA(cytosine-5)methyltransferase, **217**, 39–51.
Drosophila Topoisomerase II–DNA Interactions are Affected by DNA Structure, **217**, 53–62.
Structural Alteration in Alternating Adenine-Thymine Sequences in Positively Supercoiled DNA, **219**, 145–149.
Effects of Base Mismatches on the Structure of the Four-way DNA junction, **221**, 147–161.
Molecular Structure of a Complete Turn of *A*-DNA, **221**, 623–635.
Model for the Interaction of DNA Junctions and Resolving Enzymes, **221**, 1191–1207.

***B*-DNA structure**
Structure of *B*-DNA Decamer C-C-A-A-C-G-T-T-G-G and Comparison with Isomorphous Decamers C-C-A-A-G-A-T-T-G-G and C-C-A-G-G-C-C-T-G-G, **217**, 177–199.
Analysis of Local Helix Geometry in Three *B*-DNA Decamers and Eight Dodecamers, **217**, 201–214.

DNA structure in nucleosomes
In Vitro Assembly of a Positioned Nucleosome near the Hypersensitive Region in Simian Virus 40 Chromatin, **221**, 795–803.

DNA supercoiling
Preliminary Crystallographic Analysis of the ATP-hydrolysing Domain of the *Escherichia coli* DNA Gyrase B Protein, **217**, 15–17.
Bacterial DNA Supercoiling and [ATP]/[ADP]. Changes Associated with a Transition to Anaerobic Growth, **219**, 443–450.
DNA Looping Alters Local Conformation during Transcription, **219**, 615–622.
Torsionally Tuned Cruciform and *Z*-DNA Probes for Measuring Unrestrained Supercoiling at Specific Sites in DNA of Living Cells, **221**, 107–129.

DNA topoisomerase I
New Technique for Uncoupling the Cleavage and Religation Reactions of Eukaryotic Topoisomerase I. The Mode of Action of Camptothecin at a Specific Recognition Site, **222**, 669–678.

DNA topoisomerases
DNA Looping Alters Local Conformation during Transcription, **219**, 615–622.

DNA topology
Topoisomer Heterogeneity of Plasmid Chromatin in Living Cells, **222**, 133–137.

DNA transposition
Two Mutations of Phage Mu Transposase that Affect Strand Transfer or Interactions with B Protein Lie in Distinct Polypeptide Domains, **219**, 189–199.

***Z*-DNA**
^{1}H and ^{31}P Nuclear Magnetic Resonance Studies of Spermine Binding to the *Z*-DNA form of $d(m^5CGm^5CGm^5CG)_2$. Evidence for Decreased Spermine Mobility, **219**, 585–590.
Torsionally Tuned Cruciform and *Z*-DNA Probes for Measuring Unrestrained Supercoiling at Specific Sites in DNA of Living Cells, **221**, 107–129.

DNA-bending proteins
DNA-bending Properties of TF1, **221**, 777–794.

DNA-binding
Organization and Function of Binding Sites for the Transcriptional Activator NifA in the *Klebsiella pneumoniae nifE* and *nifU* Promoters, **220**, 915–931.

DNA-binding domain
Co-operative Binding of the Glucocorticoid Receptor DNA Binding Domain is One of at Least Two Mechanisms for Synergism, **222**, 155–165.

DNA-damage
Repair of Helix-stabilizing Anthramycin-N2 Guanine DNA Adducts by UVRA and UVRB Proteins, **220**, 855–866.

DNA-protein complex
Crystallization of Complexes of *Eco*RV Endonuclease with Cognate and Non-cognate DNA Fragments, **217**, 235–238.

DNA–protein complexes
DNA-bending Properties of TF1, **221**, 777–794.

DNA–protein interaction
Spectroscopic Studies on *λcro* Protein–DNA Interactions, **219**, 733–746.
Model for the Interaction of DNA Junctions and Resolving Enzymes, **221**, 1191–1207.

DNA-protein interactions
Regulation of Filamentous Bacteriophage Length by Modification of Electrostatic Interactions Between Coat Protein and DNA, **217**, 223–227.

DNA–protein interactions
A Predictive Model for DNA Recognition by the Herpes Simplex Virus Protein ICP4, **219**, 451–470.

DNA–Protein interactions
Structure of the Bacteriophage λ Cohesive End Site. Genetic Analysis of the Site (*cosN*) at which Nicks are Introduced by Terminase, **220**, 281–292.

dnaZ
Transcriptional Organization of the *Escherichia coli dnaX* Gene, **220**, 649–658.

Docking
Protein Docking and Complementarity, **221**, 327–346.

Dodecamer
Hierarchy of Globin Complexes. The Quaternary Structure of the Extracellular Chlorocruorin of *Eudistylia vancouverii*, **222**, 1109–1129.

Domain
Domain Structure and Interactions of the Type I and Type II Modules in the Gelatin-binding Region of Fibronectin. All Six Modules Are Independently Folded, **217**, 563–575.
Evidence for an Ancestral Core Structure in Nucleotide-binding Proteins with the Type A Motif, **221**, 751–754.
High Resolution Structure of an Oligomeric Eye Lens β-Crystallin. Loops, Arches, Linkers and Interfaces in βB2 Dimer Compared to a Monomeric γ-Crystallin, **222**, 1067–1083.

Domain interface
Manganese Superoxide Dismutase from *Thermus thermophilus*. A Structural Model Refined at 1·8 Å Resolution, **219**, 335–358.

Domains
Variant Specific Glycoprotein of *Trypanosoma brucei* Consists of Two Domains each Having an Independently Conserved Pattern of Cysteine Residues, **221**, 823–835.

Dot plot
Suboptimal Sequence Alignment in Molecular Biology. Alignment with Error Analysis, **221**, 403–419.

Double and triple resonance n.m.r.
Secondary Structure of the Ribonuclease H Domain of the Human Immunodeficiency Virus Reverse Transcriptase in Solution using Three-Dimensional Double and Triple Resonance Heteronuclear Magnetic Resonance Spectroscopy, **221**, 1081–1090.

Double-shelled virus
Crystallization and Preliminary X-ray Study of a Double-Shelled Spherical Virus, Rice Dwarf Virus, **219**, 665–669.

DRE
Transfer RNA Genes from *Dictyostelium discoideum* are Frequently Associated with Repetitive Elements and Contain Consensus Boxes in their 5′-and 3′-Flanking Regions, **222**, 537–552.

Drosophila
Informational Redundancy of $tRNA_4^{Ser}$ and $tRNA_7^{Ser}$ Genes in *Drosophila melanogaster* and Evidence for Intergenic Recombination, **219**, 175–188.
Identification and Characterization of *Drosophila melanogaster* Paramyosin, **220**, 687–700.
Functional and Ultrastructural Effects of a Missense Mutation in the Indirect Flight Muscle-specific Actin Gene of *Drosophila melanogaster*, **222**, 963–982.

Drosophila melanogaster
Use of High Coverage Reference Libraries of *Drosophila melanogaster* for Relational Data Analysis. A Step Towards Mapping and Sequencing of the Genome, **220**, 903–914.

Drug design
Structure, Function and Properties of Antibody Binding Sites, **217**, 133–151.

dsRNA transcriptase
Generation of Infectious Nucleocapsids by *in Vitro* Assembly of the Shell Protein on to the Polymerase Complex of the dsRNA Bacteriophage φ6, **218**, 569–581.

dsRNA virus
Generation of Infectious Nucleocapsids by *in Vitro* Assembly of the Shell Protein on to the Polymerase Complex of the dsRNA Bacteriophage φ6, **218**, 569–581.

Dunce
Characterization of the Memory Gene Dunce of *Drosophila melanogaster*, **222**, 553–565.

Dynamic Polarizability
Intramolecular Dielectric Screening in Proteins, **218**, 859–886.

Dynamic programming
A Simple Method to Generate Non-trivial Alternate Alignments of Protein Sequences, **219**, 727–732.

Dynamics
Molecular Basis for Co-operativity in Ca^{2+} Binding to Calbindin D_{9k}. ^1H Nuclear Magnetic Resonance Studies of $(Cd^{2+})_1$–Bovine Calbindin D_{9k}, **220**, 173–189.
Relation Between Stability, Dynamics and Enzyme Activity in 3-Phosphoglycerate Kinases from Yeast and *Thermus thermophilus*, **220**, 531–538.

Dynamics of protamine–DNA interactions
Nature of Protamine–DNA Complexes. A Special Type of Ligand Binding Co-operativity, **222**, 423–433.

E. coli
Initiation of the UvrABC Nuclease Cleavage Reaction. Efficiency of Incision is not Correlated with UvrA Binding Affinity, **220**, 19–33.
Osmotic Induction of Gene *osmC* Expression in *Escherichia coli* K12, **220**, 959–973.
Functional Specialization within the α-Subunit of *Escherichia coli* RNA Polymerase, **221**, 23–29.
Three-dimensional Model of *Escherichia coli* Ribosomal 5 S RNA as Deduced from Structure Probing in Solution and Computer Modeling, **221**, 293–308.
An Efficient Algorithm for Identifying Matches with Errors in Multiple Long Molecular Sequences, **221**, 1367–1378.
Specificity of Antitermination Mechanisms. Suppression of the Terminator Cluster T1-T2 of *Escherichia coli* Ribosomal RNA operon, *rrnB*, by Phage λ Antiterminators, **222**, 59–66.
Absolute *in Vivo* Translation Rates of Individual Codons in *Escherichia coli*. The Two Glutamic Acid Codons GAA and GAG Are Translated with a Threefold Difference in Rate, **222**, 265–280.
Escherichia coli Transcription Factor That Both Activates Fatty Acid Synthesis and Represses Fatty Acid Degradation, **222**, 843–849.

***E. coli* PolI**
An *in Vitro* Approach to Identifying Specificity Determinants of Mutagenesis Mediated by DNA Misalignments, **221**, 805–821.

e.p.r.
Mini-myoglobin. Electron Paramagnetic Resonance and Reversible Oxygenation of the Cobalt Derivative, **222**, 637–643.

*Eco*RI
Are Time-averaged Restraints Necessary for Nuclear Magnetic Resonance Refinement? A Model Study for DNA, **220**, 457–479.

EF hand motif
Chimaeric Myosin Regulatory Light Chains: Sub-domain Switching Experiments to Analyse the Function of the N-Terminal EF Hand, **218**, 825–835.

EF-hand family
Ionic Interactions with Parvalbumins. Crystal Structure Determination of Pike 4·10 Parvalbumin in Four Different Ionic Environments, **220**, 1017–1039.

Eglin c
Refined Crystal Structures of Subtilisin Novo in Complex with Wild-type and Two Mutant Eglins. Comparison with Other Serine Proteinase Inhibitor Complexes, **217**, 353–371.

Electron cryomicroscopy
Crystallographic Analysis of Acrosomal Bundle from *Limulus* Sperm, **221**, 711–725.

Electron crystallography
Sub-domain Structure of Lipid-bound Annexin-V Resolved by Electron Image Analysis, **217**, 241–245.
Two-dimensional and Epitaxial Crystallization of a Mutant Form of Yeast RNA Polymerase II, **221**, 347–357.

Electron diffraction
High-resolution Electron Crystallography of Light-harvesting Chlorophyll *a*/*b*-Protein Complex in Three Different Media, **217**, 691–699.

Electron microscopy
Direct Determination of Myosin Filament Symmetry in Scallop Striated Adductor Muscle by Rapid Freezing and Freeze Substitution, **220**, 125–132.
Structure of Soluble and Membrane-bound Human Annexin V, **220**, 199–203.
Secondary Structure of Coliphage Qβ RNA. Analysis by Electron Microscopy, **221**, 557–570.
Correlation of Metal Decoration and Topochemistry on Protein Surfaces, **221**, 637–645.
Electron Microscopic Analysis of the Peripheral and Membrane Parts of Mitochondrial NADH Dehydrogenase (Complex I), **221**, 1027–1043.

Electron microscopy of DNA
A Study of Electrophoretic Mobility of DNA in Agarose and Polyacrylamide Gels, **221**, 981–1005.

Electron optics
Three-dimensional Spatial Relationship between the Collagen Fibrils and the Inorganic Calcium Phosphate Crystals of Pickerel (*Americanus americanus*) and Herring (*Clupea harengus*) Bone, **217**, 487–501.

Electron transfer
Structure of Rubredoxin from *Desulfovibrio vulgaris* at 1·5 Å Resolution, **217**, 337–352.
X-ray Crystal Structure of the Two Site-specific Mutants His35Gln and His35Leu of Azurin from *Pseudomonas aeruginosa*, **218**, 427–447.
High-resolution Solution Structure of Reduced French Bean Plastocyanin and Comparison with the Crystal Structure of Poplar Plastocyanin, **221**, 533–555.
Crystal Structure Analysis of Oxidized *Pseudomonas aeruginosa* Azurin at pH 5·5 and pH 9·0. A pH-induced Conformational Transition Involves a Peptide Bond Flip, **221**, 765–772.

Electron transport
Crystals of *Anabaena* PCC 7119 Ferredoxin-NADP$^+$ Reductase, **218**, 271–272.

Electron transport proteins
Comparison of the Crystal Structures of a Flavodoxin in its Three Oxidation States at Cryogenic Temperatures, **218**, 195–208.

Electrostatic interaction
Anion and pH-dependent Conformational Transition of an Amphiphilic Polypeptide, **218**, 387–396.
π–π Interactions: the Geometry and Energetics of Phenylalanine–Phenylalanine Interactions in Proteins, **218**, 837–846.
Role of Electrostatic Repulsion in the Acidic Molten Globule of Cytochrome *c*, **222**, 679–686.

Electrostatic interactions
Refined Structure of Porcine Pepsinogen at 1·8 Å Resolution, **219**, 671–692.

Electrostatic interactions Filamentous bacteriophages
Regulation of Filamentous Bacteriophage Length by Modification of Electrostatic Interactions Between Coat Protein and DNA, **217**, 223–227.

Electrostatics
Surface Electrostatic Interactions Contribute Little to Stability of Barnase, **220**, 779–788.

Electrostatic(s)
In a Staphylococcal Nuclease Mutant the Side-chain of a Lysine Replacing Valine 66 is Fully Buried in the Hydrophobic Core, **221**, 7–14.

Electrostatics
Cumulative Site-directed Charge–Change Replacements in Bacteriophage T4 Lysozyme Suggest that Long-range Electrostatic Interactions Contribute Little to Protein Stability, **221**, 873–887.
Mapping Electrostatic Interactions in Macromolecular Associations, **221**, 1453–1460.

Elongation complex
Escherichia coli σ^{70} and NusA Proteins. I. Binding Interactions with Core RNA Polymerase in Solution and Within the Transcription Complex, **220**, 307–324.

Elongation complexes
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. I. Characterization of Elongation Complexes, **221**, 1091–1110.
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. II. Stability and Some Properties of Elongation Complexes, **221**, 1111–1125.

Elongation factor Tu
Crystals of Intact Elongation Factor Tu from *Thermus thermophilus* Diffracting to High Resolution, **221**, 375–377.

Empirical potential
Different Intrastrand and Interstrand Contributions to Stacking Account for Roll Variations at the Alternating Purine-Pyrimidine Sequences in *A*-DNA and *A*-RNA, **221**, 761–764.

Endocytosis
Crystallization and X-ray Diffraction Studies of a Soluble Form of Human Transferrin Receptor, **218**, 685–689.

Endonuclease
Crystallization and Preliminary Crystallographic Analysis of a Novel Nuclease from *Serratia marcescens*, **222**, 27–30.

Energy minimization
Three-dimensional Model for Stellacyanin, a "Blue" Copper-protein, **222**, 1053–1065.

Energy transfer
Detection of Transmembrane Linkages between Immunoglobulin or Complement Receptors and the Neutrophil's Cortical Microfilaments by Resonance Energy Transfer Microscopy, **218**, 263–268.

Engineering
Mapping Transition States of Protein Unfolding by Protein Engineering of Ligand-binding Sites, **221**, 1007–1014.

Enhancer
Transcriptional Enhancer in the Vicinity of a Replication Origin within the 5′ Region of the Chicken α-Globin Gene Domain, **217**, 595–598.
Analysis of Polyomavirus Enhancer-Effect on DNA Replication and Early Gene Expression, **218**, 479–483.

Enhancers
Distribution of Topoisomerase II Cleavage Sites in Simian Virus 40 DNA and the Effects of Drugs, **222**, 909–924.

Entropic forces
A Simplified Mechanical Model of Proteins Tested on the Globin Fold, **222**, 805–817.

Enzymatic and chemical probing
Three-dimensional Model of *Escherichia coli* Ribosomal 5 S RNA as Deduced from Structure Probing in Solution and Computer Modeling, **221**, 293–308.

Enzyme
Crystallization of Human Thymidylate Synthase, **219**, 161–163.
Crystallization of the Calcium-activated Phosphoenolpyruvate Carboxykinase from *Escherichia coli* K12, **219**, 593–594.

Enzyme active site
Ribonuclease T_1 with Free Recognition and Catalytic Site: Crystal Structure Analysis at 1·5 Å Resolution, **222**, 335–352.

Enzyme assembly
Functional Specialization within the α-Subunit of *Escherichia coli* RNA Polymerase, **221**, 23–29.

Enzyme IIA (lactose)
Crystallization and Preliminary X-ray Analysis of the Lactose-specific Phosphocarrier Protein IIA^{lac} of the Phosphoenolpyruvate : Sugar Phosphotransferase System from *Staphylococcus aureus*, **222**, 857–859.

Enzyme III (lactose)
Crystallization and Preliminary X-ray Analysis of the Lactose-specific Phosphocarrier Protein IIA^{lac} of the Phosphoenolpyruvate : Sugar Phosphotransferase System from *Staphylococcus aureus*, **222**, 857–859.

Enzyme kinetics
Kinetics of the Processing of the Precursor to 4·5 S RNA, a Naturally Occurring Substrate for RNase P from *Escherichia coli*, **221**, 1–5.

Enzyme mechanism
Activity and Specificity of Human Aldolases, **219**, 573–576.
Ribonuclease T_1 with Free Recognition and Catalytic Site: Crystal Structure Analysis at 1·5 Å Resolution, **222**, 335–352.

Enzyme phosphorylation
Distinct Forms of the Protein Kinase-dependent Activator of Tyrosine and Trytophan Hydroxylases, **217**, 125–132.

Enzyme purification
Purification, Crystallization and Preliminary X-ray Diffraction Studies of the *Pvu*II Endonuclease, **222**, 451–453.

Enzyme structure
Crystallization of the Hybrid *Bacillus* (1-3,1-4)-β-Glucanase H(A16-M), **218**, 703–704.
β-Lactamase of *Bacillus licheniformis* 749/C. Refinement at 2 Å Resolution and Analysis of Hydration, **220**, 435–455.
Refined Crystal Structure of the Complex of Subtilisin BPN′ and *Streptomyces* Subtilisin Inhibitor at 1·8 Å Resolution, **221**, 309–325.

Epitope library
Multiple Display of Foreign Peptides on a Filamentous Bacteriophage. Peptides from *Plasmodium falciparum* Circumsporozoite Protein as Antigens, **220**, 821–827.

Erythrina caffra
Crystal Structure of a Kunitz-type Trypsin Inhibitor from *Erythrina caffra* Seeds, **217**, 153–176.

Escherichia coli
Shared Operator Recognition Specificity between Trp Repressor and the Repressors of Bacteriophage 434, **217**, 599–602.
Identification of a Subunit Assembly Domain in the Alpha Subunit of *Escherichia coli* RNA Polymerase, **218**, 1–6.
The Roles of Residues 5 and 9 of the Recognition Helix of Lac Repressor in *lac* Operator Binding, **218**, 313–321.
Two MalT Binding Sites in Direct Repeat. A Structural Motif Involved in the Activation of All the Promoters of the Maltose Regulons in *Escherichia coli* and *Klebsiella pneumoniae*, **218**, 323–334.
The Stringent Response Blocks DNA Replication Outside the *ori* Region in *Bacillus subtilis* and at the Origin in *Escherichia coli*, **219**, 605–613.
Single Mutations in a Gene for a Tail Fiber Component of an *Escherichia coli* Phage can Cause an Extension from a Protein to a Carbohydrate as a Receptor, **219**, 655–663.
Deletions Induced by Gamma Rays in the Genome of *Escherichia coli*, **220**, 193–198.

***Escherichia coli* K12**
Isolation and Characterization of Visible Light-sensitive Mutants of *Escherichia coli* K12, **219**, 393–398.

Ethylene biosynthesis
1-Aminocyclopropane-1-Carboxylate Synthase in Tomato is Encoded by a Multigene Family Whose Transcription is Induced During Fruit and Floral Senescence, **222**, 937–961.

Eudistylia
Hierarchy of Globin Complexes. The Quaternary Structure of the Extracellular Chlorocruorin of *Eudistylia vancouverii*, **222**, 1109–1129.

Eukaryote
Structural Analysis of the Peptidyl Transferase Region in Ribosomal RNA of the Eukaryote *Xenopus laevis*, **217**, 93–112.

Eukaryotic genome
A Widely Distributed "CAT" Family of Repetitive DNA Sequences, **217**, 629–635.

Eukaryotic transcription
NFY or a Related CCAAT Binding Factor Can Be Replaced by Other Transcriptional Activators for Cooperation with HNF1 in Driving the Rat Albumin Promoter *in Vivo*, **222**, 31–43.

Evolution
Suggestions for "Safe" Residue Substitutions in Site-directed Mutagenesis, **217**, 721–729.
Incipient Mitochondrial Evolution in Yeasts. I. The Physical Map and Gene Order of *Saccharomyces douglasii* Mitochondrial DNA Discloses a Translocation of a Segment of 15,000 Base-pairs and the Presence of New Introns in Comparison with *Saccharomyces cerevisiae*, **218**, 735–746.
Composite of A and F-type 5′ Terminal Sequences Defines a Subfamily of Mouse LINE-1 Elements, **221**, 367–373.
Crystal Structure of Human α-Lactalbumin at 1·7 Å Resolution, **221**, 571–581.
Evidence for Horizontal Gene Transfer in *Escherichia coli* Speciation, **222**, 851–856.
An Axial Binding Site in the *Tetrahymena* Precursor RNA, **222**, 995–1012.

Evolutionary history
Genomic Structure of *Chlamydomonas* Caltractin. Evidence for Intron Insertion Suggests a Probable Geneology for the EF-hand Superfamily of Proteins, **221**, 175–191.

Evolutionary rates
Sequence and Comparative Analysis of the Rabbit α-Like Globin Gene Cluster Reveals a Rapid Mode of Evolution in a G + C-rich Region of Mammalian Genomes, **222**, 233–249.

Exchange of histone octamers
Can One Measure the Free Energy of Binding of the Histone Octamer to Different DNA Sequences by Salt-dependent Reconstitution?, **219**, 391–392.

Excluded volume
Characterization of the Cytoplasm of *Escherichia coli* K-12 as a Function of External Osmolarity. Implications for Protein–DNA Interactions *in Vivo*, **222**, 281–300.

Estimation of Macromolecule Concentrations and Excluded Volume Effects for the Cytoplasm of *Escherichia coli*, **222**, 599–620.

Excluded volume effects
Protein Folding. Effect of Packing Density on Chain Conformation, **219**, 109–122.
Accelerated DNA Renaturation: Complementary Recognition in Condensed DNA, **222**, 1085–1108.

Exo-and endonuclease
Mutations of a Conserved Residue within HIV-1 Ribonuclease H Affect Its Exo-and Endonuclease Activities, **220**, 801–818.

Exon selection
Prediction of Human mRNA Donor and Acceptor Sites from the DNA Sequence, **220**, 49–65.

Exoribonucleases
mRNA Degradation by Processive 3′–5′ Exoribonucleases *in Vitro* and the Implications for Prokaryotic mRNA Decay *in Vivo*, **221**, 81–95.

Expansion segments
Secondary Structure Constraints on the Evolution of *Drosophila* 28 S Ribosomal RNA Expansion Segments, **219**, 381–390.

Exposite
Refined Structure of the Hirudin–Thrombin Complex, **221**, 583–601.

Expression
Bacterial Expression of Rat Liver Succinyl-CoA Synthetase α-Subunit, **219**, 165–174.
Expression of the Protease Inhibitor Ecotin and its Co-crystallization with Trypsin, **222**, 139–142.

Eye lens
High Resolution Structure of an Oligomeric Eye Lens β-Crystallin. Loops, Arches, Linkers and Interfaces in βB2 Dimer Compared to a Monomeric γ-Crystallin, **222**, 1067–1083.

F plasmid
Regulation of the F Plasmid *tra Y* Promoter in *Escherichia coli* by Host and Plasmid Factors, **218**, 119–128.
Regulation of the F Plasmid *tra Y* Promoter in *Escherichia coli* K12 as a Function of Sequence Context, **220**, 271–279.

Fab
Characterization of Crystals of An Fab Fragment of a Murine Monoclonal Antibody, **222**, 445–446.

Fab fragment
2·9 Å Resolution Structure of an Anti-dinitrophenyl-spin-label Monoclonal Antibody Fab Fragment with Bound Hapten, **221**, 239–256.

Factor D
Crystallization and Preliminary X-ray Investigation of Factor D of Human Complement, **219**, 1–3.

Factor H
Three-dimensional Structure of a Complement Control Protein Module in Solution, **219**, 717–725.

Factorial Correspondence Analysis
Evidence for Horizontal Gene Transfer in *Escherichia coli* Speciation, **222**, 851–856.

fadR
Escherichia coli Transcription Factor That Both Activates Fatty Acid Synthesis and Represses Fatty Acid Degradation, **222**, 843–849.

Fat body
Structures and Organization of Major Plasma Protein Genes of the Silkworm *Bombyx mori*, **218**, 7–12.

Fatty acid
Identification of the Acyl Transfer Site of Fatty Acyl-protein Synthetase from Bioluminescent Bacteria, **219**, 69–77.

Fatty acid synthesis
Escherichia coli Transcription Factor That Both Activates Fatty Acid Synthesis and Represses Fatty Acid Degradation, **222**, 843–849.

Ferredoxin
Refined Crystal Structure of Ferredoxin II from *Desulfovibrio gigas* at 1·7 Å, **219**, 693–715.

Ferredoxin-NADP$^+$-reductase
Crystals of *Anabaena* PCC 7119 Ferredoxin-NADP $^+$ Reductase, **218**, 271–272.

Ferritin
Influence of Site-directed Modifications on the Formation of Iron Cores in Ferritin, **221**, 1443–1452.

Fe–S cluster
Refined Crystal Structure of Ferredoxin II from *Desulfovibrio gigas* at 1·7 Å, **219**, 693–715.

Fibre
Functional and Structural Effects of an Ala to Val Mutation in the Adenovirus Serotype 2 Fibre, **217**, 477–486.

Fibril structure
Analysis of Structural Design Features in Collagen, **218**, 209–219.

Fibrils
Molecular Packing in Type I Collagen Fibrils. A Model with Neighbouring Collagen Molecules Aligned in Axial Register, **218**, 815–823.

Fibrin
Fibrinogen Structure in Projection at 18 Å Resolution. Electron Density by Co-ordinated Cryo-electron Microscopy and X-ray Crystallography, **222**, 89–98.

Fibrinogen
Fibrinogen Structure in Projection at 18 Å Resolution. Electron Density by Co-ordinated Cryo-electron Microscopy and X-ray Crystallography, **222**, 89–98.

Fibronectin
Domain Structure and Interactions of the Type I and Type II Modules in the Gelatin-binding Region of Fibronectin. All Six Modules Are Independently Folded, **217**, 563–575.

Filament assembly
A Folded (10 S) Conformer of Myosin from a Striated Muscle and its Implications for Regulation of ATPase Activity, **217**, 323–335.

Filament formation
Aggregation and Secondary Structure of Synthetic Amyloid βA4 Peptides of Alzheimer's Disease, **218**, 149–163.

Filamentous bacteriophage
DNA Sequence of the Filamentous Bacteriophage Pf1, **218**, 349–364.
Characterization and Sequence of the *Escherichia coli* Stress-induced *psp* Operon, **220**, 35–48.
Multiple Display of Foreign Peptides on a Filamentous Bacteriophage. Peptides from *Plasmodium falciparum* Circumsporozoite Protein as Antigens, **220**, 821–827.

Filamentous phage
By-passing Immunization. Human Antibodies from V-gene Libraries Displayed on Phage, **222**, 581–597.

Filamentous phages
Selection of Antibody Ligands from a Large Library of Oligopeptides Expressed on a Multivalent Exposition Vector, **222**, 301–310.

Fission yeast
A Large Number of tRNA Genes are Symmetrically Located in Fission Yeast Centromeres, **218**, 13–17.
Characterization of the *POL3* Gene Product from *Schizosaccharomyces pombe* Indicates Inter-species Conservation of the Catalytic Subunit of DNA Polymerase δ, **222**, 209–218.

Fixation of mutations
Incipient Mitochondrial Evolution in Yeasts. II. The Complete Sequence of the Gene Coding for Cytochrome *b* in *Saccharomyces douglasii* Reveals the Presence of Both New and Conserved Introns and Disclosed Major Differences in the Fixation of Mutations in Evolution, **218**, 747–760.

Flagellar filament
Amino Acids Responsible for Flagellar Shape are Distributed in Terminal Regions of Flagellin, **219**, 471–480.
Role of the Disordered Terminal Regions of Flagellin in Filament Formation and Stability, **221**, 1461–1474.

Flagellar genes
Identification of *Cis* and *Trans*-elements Involved in the Timed Control of a *Caulobacter* Flagellar Gene, **217**, 247–257.

Flagellar rotation
Mutations in the MotA Protein of *Escherichia coli* Reveal Domains Critical for Proton Conduction, **221**, 1433–1442.

Flagellar shape
Amino Acids Responsible for Flagellar Shape are Distributed in Terminal Regions of Flagellin, **219**, 471–480.

Flagellin
Point Mutations that Lock *Salmonella typhimurium* Flagellar Filaments in the Straight Right-handed and Left-handed Forms and their Relation to Filament Superhelicity, **220**, 79–88.
Role of the Disordered Terminal Regions of Flagellin in Filament Formation and Stability, **221**, 1461–1474.

Flagellin polymorphism
Amino Acids Responsible for Flagellar Shape are Distributed in Terminal Regions of Flagellin, **219**, 471–480.

Flavins
Comparison of the Crystal Structures of a Flavodoxin in its Three Oxidation States at Cryogenic Temperatures, **218**, 195 208.

Flavodoxin
Comparison of the Crystal Structures of a Flavodoxin in its Three Oxidation States at Cryogenic Temperatures, **218**, 195–208.

Flavoenzyme
Crystal Structure of Cholesterol Oxidase from *Brevibacterium sterolicum* Refined at 1·8 Å Resolution, **219**, 533–554.

Flavoenzymes
Refined Crystal Structure of Lipoamide Dehydrogenase from *Azotobacter vinelandii* at 2·2 Å Resolution. A Comparison with the Structure of Glutathione Reductase, **220**, 975–994.
Structure of NADH Peroxidase from *Streptococcus faecalis* 10C1 Refined at 2·16 Å Resolution, **221**, 1325–1344.

Flavoprotein
Crystals of *Anabaena* PCC 7119 Ferredoxin-NADP$^+$ Reductase, **218**, 271-272.

Flavoprotein disulfide reductases
Cloning, Sequence and Overexpression of NADH Peroxidase from *Streptococcus faecalis* 10C1. Structural Relationship with the Flavoprotein Disulfide Reductases, **221**, 857–871.

Flavoproteins
Comparison of the Crystal Structures of a Flavodoxin in its Three Oxidation States at Cryogenic Temperatures, **218**, 195–208.

Flexibility
Molecular Recognition. Conformational Analysis of Limited Proteolytic Sites and Serine Proteinase Protein Inhibitors, **220**, 507–530.

Flexible loop
Refined 1·83 Å Structure of Trypanosomal Triosephosphate Isomerase Crystallized in the Presence of 2·4 M-Ammonium Sulphate. A Comparison with the Structure of the Trypanosomal Triosephosphate Isomerase–Glycerol-3-phosphate Complex, **220**, 995–1015.

Flp recombinase
Tyr60 Variants of Flp Recombinase Generate Conformationally Altered Protein–DNA Complexes. Differential Activity in Full-site and Half-site Recombinations, **218**, 107–118.

Flp variants
Tyr60 Variants of Flp Recombinase Generate Conformationally Altered Protein–DNA Complexes. Differential Activity in Full-site and Half-site Recombinations, **218**, 107–118.

Fluorescence
Monomers of the *Escherichia coli* SSB-1 Mutant Protein Bind Single-stranded DNA, **217**, 63–74.
Spectroscopic Studies on *λcro* Protein–DNA Interactions, **219**, 733–746.
Physical Studies of Tyrosine and Tryptophan Residues in Mammalian A1 Heterogeneous Nuclear Ribonucleoprotein. Support for a Segmented Structure, **221**, 693–709.

Fluorescence energy transfer
Fluorescence Energy Transfer Distance Measurements Using Site-directed Single Cysteine Mutants. The Membrane Insertion of Colicin A, **218**, 639–653.

Fluorescence lifetime
Relation Between Stability, Dynamics and Enzyme Activity in 3-Phosphoglycerate Kinases from Yeast and *Thermus thermophilus*, **220**, 531–538.

Fluorescence spectroscopy
Circular Dichroism and Fluorescence Analysis of the Interaction of Pf1 Gene *5* Protein with Poly(dT), **217**, 681–689.

***p*-fluoro-phenylalanine resistance**
Amino Acid Substrate Specificity of *Escherichia coli* Phenylalanyl-tRNA Synthetase Altered by Distinct Mutations, **222**, 99–124.

Folded conformation
A Folded (10 S) Conformer of Myosin from a Striated Muscle and its Implications for Regulation of ATPase Activity, **217**, 323–335.

Folding intermediate
COSMIC Analysis of the Major α-Helix of Barnase during Folding, **219**, 5–9.
(14–38, 30–51) Double-disulphide Intermediate in Folding of Bovine Pancreatic Trypsin Inhibitor: A Two-dimensional ^{1}H Nuclear Magnetic Resonance, **222**, 353–371.
Two-dimensional ^{1}H Nuclear Magnetic Resonance Study of the (5–55) Single-disulphide Folding Intermediate of Bovine Pancreatic Trypsin Inhibitor, **222**, 373–390.

Folding pathway
COSMIC Analysis of the Major α-Helix of Barnase during Folding, **219**, 5–9.

Folding pathways
Dynamic Monte Carlo Simulations of a New Lattice Model of Globular Protein Folding, Structure and Dynamics, **221**, 499–531.

Follicular cells
Developmental Regulation of Covalent Modification of Double-stranded RNA during Silkmoth Oogenesis, **218**, 517–527.

Footprinting
Identification of the Different Intermediates in the Interaction of (A)BC Excinuclease with its Substrates by DNase I Footprinting on two Uniquely Modified Oligonucleotides, **219**, 27–36.
Factor-independent Activation of *Escherichia coli* rRNA Transcription. II. Characterization of Complexes of *rrnB* P1 Promoters Containing or Lacking the Upstream Activator Region with *Escherichia coli* RNA Polymerase, **220**, 569–583.

Frameshift
Mutation Spectrum Following Transfection of Ultraviolet-irradiated Single-stranded or Double-stranded Shuttle Vector DNA into Monkey Cells, **218**, 667–673.

An *in Vitro* Approach to Identifying Specificity Determinants of Mutagenesis Mediated by DNA Misalignments, **221**, 805–821.

Free energy
Parallel and Antiparallel Holliday Junctions Differ in Structure and Stability, **221**, 1419–1432.

Freeze substitution
Direct Determination of Myosin Filament Symmetry in Scallop Striated Adductor Muscle by Rapid Freezing and Freeze Substitution, **220**, 125–132.

Freeze-etching
Correlation of Metal Decoration and Topochemistry on Protein Surfaces, **221**, 637–645.

Freeze-fracture
Supramolecular Organization of Double-stranded DNA Molecules in the Columnar Hexagonal Liquid Crystalline Phase. An Electron Microscopic Analysis Using Freeze-fracture Methods, **218**, 165–181.

Frequency filtering
Real-time Interactive Frequency Filtering of Molecular Dynamics Trajectories, **220**, 1–4.

Fruit ripening
1-Aminocyclopropane-1-Carboxylate Synthase in Tomato is Encoded by a Multigene Family Whose Transcription is Induced During Fruit and Floral Senescence, **222**, 937–961.

Functional domains
Mini-myoglobin. Electron Paramagnetic Resonance and Reversible Oxygenation of the Cobalt Derivative, **222**, 637–643.

Fusion assay
Preliminary Crystallographic Analysis of Cardiotoxin V with Major Fusion Activity from Taiwan Cobra (*Naja naja atra*) Venom, **219**, 591– 597.

G + C-rich isochores
Sequence and Comparative Analysis of the Rabbit α-Like Globin Gene Cluster Reveals a Rapid Mode of Evolution in a G + C-rich Region of Mammalian Genomes, **222**, 233–249.

G_1 cyclins
A General Approach to the Isolation of Cell Cycle-regulated Genes in the Budding Yeast, *Saccharomyces cerevisiae*, **218**, 543–556.

Gamma rays
Deletions Induced by Gamma Rays in the Genome of *Escherichia coli*, **220**, 193–198.

Gc
Crystallization and Preliminary X-ray Analysis of Gc, the Vitamin D-binding Protein in Serum, **220**, 545–547.

GC element
Regulatory Elements Mediating Transcription of the Human Ha-*ras* Gene, **220**, 599–611.

Gelatin
Domain Structure and Interactions of the Type I and Type II Modules in the Gelatin-binding Region of Fibronectin. All Six Modules Are Independently Folded, **217**, 563 575.

Gel-electrophoresis
A Study of Electrophoretic Mobility of DNA in Agarose and Polyacrylamide Gels, **221**, 981–1005.

Gene *5* protein
Circular Dichroism and Fluorescence Analysis of the Interaction of Pf1 Gene *5* Protein with Poly(dT), **217**, 681 689.
Structural Parameters of the Pf1 Gene *5* Protein–DNA Complex in Solution by Neutron Scattering, **221**, 755–759.

Gene amplification
Reiterated Gene Amplifications at Specific Short Homology Sequences in Phage T4 Produce Hp17 Mutants, **218**, 705–721.

Gene expression
A Widely Distributed "CAT" Family of Repetitive DNA Sequences, **217**, 629–635.
Regulatory Elements Mediating Transcription of the Human Ha-*ras* Gene, **220**, 599–611.

Gene family
Structures and Organization of Major Plasma Protein Genes of the Silkworm *Bombyx mori*, **218**, 7–12.

Gene fusion
In Vivo Analysis of Overlapping Transcription Units in the *rplKAJLrpoBC* Ribosomal Protein–DNA Polymerase Gene Cluster of *Escherichia coli*, **218**, 23–31.
Osmotic Induction of Gene *osmC* Expression in *Escherichia coli* K12, **220**, 959–973.

Gene organization
Structure and Evolution of the Cytotoxic Cell Proteinase Genes CCP3, CCP4 and CCP5, **220**, 867–875.

Gene regulation
Differentiation-dependent Alteration in the Chromatin Structure of Chromosomal Protein HMG-17 Gene During Erythropoiesis, **217**, 75–84.
A Widely Distributed "CAT" Family of Repetitive DNA Sequences, **217**, 629–635.
A Predictive Model for DNA Recognition by the Herpes Simplex Virus Protein ICP4, **219**, 451–470.
In Vivo Interaction of *Escherichia coli lac* Repressor N-Terminal Fragments with the *lac* Operator, **219**, 623 634.

Gene structure
Identifying Potential tRNA Genes in Genomic DNA Sequences, **220**, 659–671.
Genomic Structure of *Chlamydomonas* Caltractin. Evidence for Intron Insertion Suggests a Probable Geneology for the EF-hand Superfamily of Proteins, **221**, 175–191.
Characterization of the Memory Gene Dunce of *Drosophila melanogaster*, **222**, 553–565.
1-Aminocyclopropane-1-Carboxylate Synthase in Tomato is Encoded by a Multigene Family Whose Transcription is Induced During Fruit and Floral Senescence, **222**, 937–961.

Gene transduction
Conserved Chromatin Structure in c-*myc* 5′-Flanking DNA after Viral Transduction, **222**, 45–57.

Gene transfer
Mitochondrial-like DNA Sequences Flanked by Direct and Inverted Repeats in the Nuclear Genome of *Toxoplasma gondii*, **222**, 525–536.

Gene-directed mutagenesis
Complete Physical Map of the *Bacillus subtilis* 168 Chromosome Constructed by a Gene-directed Mutagenesis Method, **220**, 631 648.

Genetic recombination
Accelerated DNA Renaturation: Complementary Recognition in Condensed DNA, **222**, 1085–1108.

Genetic switch
RNA Polymerase Bound to the P_R Promoter of Bacteriophage λ Inhibits Open Complex Formation at the Divergently Transcribed P_{RM} Promoter. Implications for an Indirect Mechanism of Transcriptional Activation by λ Repressor, **222**, 479–494.

Genome
DNA Sequence of the Filamentous Bacteriophage Pf1, **218**, 349–364.
Use of High Coverage Reference Libraries of *Drosophila melanogaster* for Relational Data Analysis. A Step Towards Mapping and Sequencing of the Genome, **220**, 903–914.

Geometric distortions
Structure of Rubredoxin from *Desulfovibrio vulgaris* at 1·5 Å Resolution, **217**, 337–352.

Geotrichum candidum
Multiple Crystal Forms of Lipases from *Geotrichum candidum*, **220**, 541–543.

Globin complexes
Hierarchy of Globin Complexes. The Quaternary Structure of the Extracellular Chlorocruorin of *Eudistylia vancouverii*, **222**, 1109–1129.

Globin fold
A Simplified Mechanical Model of Proteins Tested on the Globin Fold, **222**, 805–817.

α-Globin gene
An Apparent Pause Site in the Transcription Unit of the Rabbit α-Globin Gene, **220**, 255–270.

α-globin gene cluster
Sequence and Comparative Analysis of the Rabbit α-Like Globin Gene Cluster Reveals a Rapid Mode of Evolution in a G + C-rich Region of Mammalian Genomes, **222**, 233–249.

α-globin genes
Transcriptional Enhancer in the Vicinity of a Replication Origin within the 5′ Region of the Chicken α-Globin Gene Domain, **217**, 595–598.

(1-3,1-4)-β-glucanase
Crystallization of the Hybrid *Bacillus* (1-3,1-4)-β-Glucanase H(A16-M), **218**, 703–704.

Glucocorticoid receptor
Co-operative Binding of the Glucocorticoid Receptor DNA Binding Domain is One of at Least Two Mechanisms for Synergism, **222**, 155–165.

Gluconeogenesis
Crystallization of the Calcium-activated Phosphoenolpyruvate Carboxykinase from *Escherichia coli* K12, **219**, 593–594.

Glucose dehydrogenase
Crystallization and Preliminary Crystallographic Study of Glucose Dehydrogenase from the Archaebacterium *Thermoplasma acidophilum*, **222**, 143–144.

Glucose permease
Crystallization of the IIA Domain of the Glucose Permease of *Bacillus subtilis*, **221**, 1079–1080.

Glutamine synthetase
Identification of DNA Sequences Involved in Regulating *Bacillus subtilis glnRA* Expression by the Nitrogen Source, **220**, 241–253.

Glutaredoxin
Sequence-specific ^{1}H n.m.r. Assignments and Determination of the Three-dimensional Structure of Reduced *Escherichia coli* Glutaredoxin, **221**, 1311–1324.

Glutathione reductase
Refined Crystal Structure of Lipoamide Dehydrogenase from *Azotobacter vinelandii* at 2·2 Å Resolution. A Comparison with the Structure of Glutathione Reductase, **220**, 975–994.

Glycine decarboxylase complex
Crystallographic Data for H-Protein from the Glycine Decarboxylase Complex, **220**, 223–224.

Glycogen phosphorylase
Structural Mechanism for Glycogen Phosphorylase Control by Phosphorylation and AMP, **218**, 233–260.

Glycoprotein
Crystallization and Preliminary X-ray Analysis of an Intact Soluble-form Variant Surface Glycoprotein from the African Trypanosome, *Trypanosoma brucei*, **218**, 679–683.

glycosidases
Lysozyme Revisited: Crystallographic Evidence for Distortion of an *N*-Acetylmuramic Acid Residue Bound in Site D, **220**, 401–424.

Glycosidic hydrolysis
Lysozyme Revisited: Crystallographic Evidence for Distortion of an *N*-Acetylmuramic Acid Residue Bound in Site D, **220**, 401–424.

Glycosisic angle alternation
Multinuclear Nuclear Magnetic Resonance Studies of Na Cation-stabilized Complex Formed by d(G-G-T-T-T-T-C-G-G) in Solution. Implications for G-tetrad Structures, **222**, 819–832.

Glyoxylate cycle
Use of Chemical Modification in the Crystallization of Isocitrate Lyase from *Escherichia coli*, **220**, 13–16.

gp32*I crystal
Analysis of Symmetry and Three-dimensional Reconstruction of Thin gp32*I Crystals, **217**, 551–562.

G-proteins
Crystal Structures at 2·2 Å Resolution of the Catalytic Domains of Normal *ras* Protein and an Oncogenic Mutant Complexed with GDP, **217**, 503–516.

G-Quadruplex
Multinuclear Nuclear Magnetic Resonance Studies of Na Cation-stabilized Complex Formed by d(G-G-T-T-T-T-C-G-G) in Solution. Implications for G-tetrad Structures, **222**, 819–832.

Gramicidin
Co-crystals of Gramicidin A and Phospholipid. A System for Studying the Structure of a Transmembrane Channel, **217**, 625–627.
Location of Ion-binding Sites in the Gramicidin Channel by X-ray Diffraction, **218**, 847–858.

Gramicidin A
Experimental Determination of Torsion Angles in the Polypeptide Backbone of the Gramicidin A Channel by Solid State Nuclear Magnetic Resonance, **218**, 607–619.
Solid-state Nuclear Magnetic Resonance Derived Model for Dynamics in the Polypeptide Backbone of the Gramicidin A Channel, **218**, 621–637.

Granulocyte–macrophage colony stimulating factor
Low-resolution Structure of Recombinant Human Granulocyte–Macrophage Colony Stimulating Factor, **221**, 55–60.

Granzyme
Structure and Evolution of the Cytotoxic Cell Proteinase Genes CCP3, CCP4 and CCP5, **220**, 867–875.

Graphics display
Real-time Interactive Frequency Filtering of Molecular Dynamics Trajectories, **220**, 1–4.

Group additivity
Solid Model Compounds and the Thermodynamics of Protein Unfolding, **222**, 699–709.

Group I introns
Six Group I Introns and Three Internal Transcribed Spacers in the Chloroplast Large Subunit Ribosomal RNA Gene of the Green Alga *Chlamydomonas eugametos*, **218**, 293–311.

Group I introns Computer modelling
Function of P11, a Tertiary Base Pairing in Self-splicing Introns of Subgroup IA, **221**, 1153–1164.

Group II intron
Splice Site Selection and Role of the Lariat in a Group II Intron, **219**, 415–428.
Restoration of the Self-splicing Activity of a Defective Group II Intron by a Small *Trans*-acting RNA, **222**, 179–187.

Group II intron RNA
Fate of the Junction Phosphate in Alternating Forward and Reverse Self-splicing Reactions of Group II Intron RNA, **222**, 145–154.

G-tetrad
Multinuclear Nuclear Magnetic Resonance Studies of Na Cation-stabilized Complex Formed by d(G-G-T-T-T-T-C-G-G) in Solution. Implications for G-tetrad Structures, **222**, 819–832.

GTP-binding protein
A Severely Truncated Form of Translational Initiation Factor 2 Supports Growth of *Escherichia coli*, **220**, 335–349.

Guanine nucleotide-binding protein
Crystals of Intact Elongation Factor Tu from *Thermus thermophilus* Diffracting to High Resolution, **221**, 375–377.

Gyrase
Bacterial DNA Supercoiling and [ATP]/[ADP]. Changes Associated with a Transition to Anaerobic Growth, **219**, 443–450.

H1
Chromatin Assembly on Plasmid DNA *in Vitro*. Apparent Spreading of Nucleosome Alignment from one Region of pBR327 by Histone H5, **222**, 1131–1147.

$H1^0$
Regulation of Histone $H1^0$ Accumulation During Induced Differentiation of Murine Erythroleukemia Cells, **217**, 85–92.

H5
Chromatin Assembly on Plasmid DNA *in Vitro*. Apparent Spreading of Nucleosome Alignment from one Region of pBR327 by Histone H5, **222**, 1131–1147.

Ha-*ras* gene
Regulatory Elements Mediating Transcription of the Human Ha-*ras* Gene, **220**, 599–611.

Haemoglobin
Allosteric Transition in Triply Met-Haemoglobin, **217**, 303–306.
Functional Role of the Distal Valine (E11) Residue of α Subunits in Human Haemoglobin, **218**, 761–767.
Site-directed Mutagenesis in Haemoglobin. Functional Role of Tyrosine-42(C7)α at the $\alpha 1$–$\beta 2$ Interface, **218**, 769–778.

Haemolysin
Analysis of the Membrane Organization of an *Escherichia coli* Protein Translocator, HlyB, a Member of a Large Family of Prokaryote and Eukaryote Surface Transport Proteins, **217**, 441–454.

Half-site recombination
Tyr60 Variants of Flp Recombinase Generate Conformationally Altered Protein–DNA Complexes. Differential Activity in Full-site and Half-site Recombinations, **218**, 107–118.

Haloarcula marismortui
Characterization and Preliminary Attempts for Derivatization of Crystals of Large Ribosomal Subunits from *Haloarcula marismortui* Diffracting to 3 Å Resolution, **222**, 11–15.

Haloferax
Detailed Physical Map and Set of Overlapping Clones Covering the Genome of the Archaebacterium *Haloferax volcani* DS2, **222**, 509–524.

Hamster
Isolation and Characterization of a Previously Unrecognized Myosin Heavy Chain Gene Present in the Syrian Hamster, **218**, 657–665.

Hanging-drop technique
Purification, Crystallization and Preliminary X-ray Diffraction Studies of the *Pvu*II Endonuclease, **222**, 451–453.

Harmonic approximation
Intramolecular Dielectric Screening in Proteins, **218**, 859–886.

Heat capacity changes
Molecular Basis of Co-operativity in Protein Folding, **222**, 687–698.
Solid Model Compounds and the Thermodynamics of Protein Unfolding, **222**, 699–709.

Heat shock
Characterization and Sequence of the *Escherichia coli* Stress-induced *psp* Operon, **220**, 35–48.

Heat-shock promoters
Development of RNA Polymerase-Promoter Contacts during Open Complex Formation, **220**, 585–597.

Heavy-atom clusters
Characterization and Preliminary Attempts for Derivatization of Crystals of Large Ribosomal Subunits from *Haloarcula marismortui* Diffracting to 3 Å Resolution, **222**, 11–15.

HeLa cells
Regulatory Elements Mediating Transcription of the Human Ha-*ras* Gene, **220**, 599–611.

α-helical coiled coil
Single Charge Change on the Helical Surface of the Paramyosin Rod Dramatically Disrupts Thick Filament Assembly in *Caenorhabditis elegans*, **219**, 429–441.

Helical packing
Crystallization and X-ray Diffraction Studies of a Soluble Form of Human Transferrin Receptor, **218**, 685–689.

Helical three-dimensional reconstruction
A Molecular Switch: Subunit Rotations Involved in the Right-handed to Left-handed Transitions of *Salmonella typhimurium* Flagellar Filaments, **220**, 67–77.

Helical twist profiles
Analysis of Local Helix Geometry in Three *B*-DNA Decamers and Eight Dodecamers, **217**, 201–214.

Helicase
DNA-induced Dimerization of the *Escherichia coli* Rep Helicase, **221**, 1165–1181.

α-helix
A Nuclear Magnetic Resonance Study of the Hydrogen-Exchange Behaviour of Lysozyme in Crystals and Solution, **218**, 413–426.
Proline Kinks in Transmembrane α-Helices, **218**, 499–503.
Supercoiling is Essential for the Formation and Stability of the Initiation Complex at the Divergent *malEp* and *malKp* Promoters, **218**, 529–542.
Neutron Diffraction Studies of the Structure of Filamentous Bacteriophage Pf1. Demonstration that the Coat Protein Consists of a Pair of α-Helices with an Intervening, Non-helical Surface Loop, **220**, 359–379.
Evidence for an Ancestral Core Structure in Nucleotide-binding Proteins with the Type A Motif, **221**, 751–754.

Helix dipole
Relationship between Nuclear Magnetic Resonance Chemical Shift and Protein Secondary Structure, **222**, 311–333.

Helix movements
Analysis of Protein Loop Closure. Two Types of Hinges Produce One Motion in Lactate Dehydrogenase, **220**, 133–149.

Helix packing
Structural and Thermodynamic Analysis of the Packing of Two α-Helices in Bacteriophage T4 Lysozyme, **221**, 647–667.

α-helix propensity
Straight-chain Non-polar Amino Acids Are Good Helix-formers in Water, **219**, 135–137.

Helix substitution experiments
Position Effect on Apparent Helical Propensities in the C-peptide Helix, **221**, 1395–1401.

Helix-coil transition
Anion and pH-dependent Conformational Transition of an Amphiphilic Polypeptide, **218**, 387–396.

Helix-turn-helix
The Role of Internal Packing Interactions in Determining the Structure and Stability of a Protein, **219**, 359–376.

Helix-turn-helix motif
The Roles of Residues 5 and 9 of the Recognition Helix of Lac Repressor in *lac* Operator Binding, **218**, 313–321.

Helix-turn-helix repressor
The Phage 434 Cro/O_R1 Complex at 2·5 Å Resolution, **219**, 321–334.

Hemerythrin
Structures of Deoxy and Oxy Hemerythrin at 2·0 Å Resolution, **218**, 583–593.
Structures of Met and Azidomet Hemerythrin at 1·66 Å Resolution, **220**, 723–737.

hemH
Isolation and Characterization of Visible Light-sensitive Mutants of *Escherichia coli* K12, **219**, 393–398.

Hemocyanins
Assembly of *Octopus dofleini* Hemocyanin. A Study of the Kinetics by Sedimentation, Light Scattering and Electron Microscopy, **217**, 307–321.

Hemoglobin
Crystallization and Preliminary X-ray Crystallographic Studies of CO-hemoglobin from the North Atlantic Salmon (*Salmo salar*), **220**, 829–830.
Proton Nuclear Magnetic Resonance Study of the Solution Distal Histidine Orientation in Monomeric *Chironomus thummi thummi* Cyanomet Hemoglobins. Dynamic Stability of the Heme Pocket as Monitored by Labile Proton Exchange, **221**, 1015–1026.
Crystallization of a Complex of Hemoglobin Components II and III of the Symbiont-harboring Clam *Lucina pectinata*, **222**, 463–464.

Hemoglobin crystals
Crystallization and Preliminary Data for the Ferric Form of *Lucina pectinata* Hemoglobin I, **222**, 447–449.

Hemoproteins
X-ray Crystal Structure of the Ferric Sperm Whale Myoglobin : Imidazole Complex at 2·0 Å Resolution, **217**, 409–412.
Mini-myoglobin. Electron Paramagnetic Resonance and Reversible Oxygenation of the Cobalt Derivative, **222**, 637–643.

3D heteronuclear n.m.r.
Secondary Structure of the Ribonuclease H Domain of the Human Immunodeficiency Virus Reverse Tran scriptase in Solution using Three-Dimensional Double and Triple Resonance Heteronuclear Magnetic Reson ance Spectroscopy, **221**, 1081–1090.

Hexagonal packing
Supramolecular Organization of Double-stranded DNA Molecules in the Columnar Hexagonal Liquid Crystal line Phase. An Electron Microscopic Analysis Using Freeze-fracture Methods, **218**, 165–181.

High affinity
Structure, Function and Properties of Antibody Binding Sites, **217**, 133–151.

High gene dosis suppression
MRS3 and MRS4, Two Suppressors of mtRNA Splicing Defects in Yeast, are New Members of the Mitochondrial Carrier Family, **217**, 23–37.

High resolution refinement
Structure of Rubredoxin from *Desulfovibrio vulgaris* at 1·5 Å Resolution, **217**, 337–352.

High resolution X-ray structure
DNase I-induced DNA Conformation. 2 Å Structure of a DNase I–Octamer Complex, **222**, 645–667.

High-affinity ligands
Systematic Evolution of Ligands by Exponential Enrichment with Integrated Optimization by Non-linear Analysis, **222**, 739–761.

Hirudin
Refined Structure of the Hirudin–Thrombin Complex, **221**, 583–601.
Structure of the Hirugen and Hirulog 1 Complexes of α-Thrombin, **221**, 1379–1393.

Hirugen
Structure of the Hirugen and Hirulog 1 Complexes of α-Thrombin, **221**, 1379–1393.

Hirulog 1
Structure of the Hirugen and Hirulog 1 Complexes of α-Thrombin, **221**, 1379–1393.

Histone
Chromatin Assembly on Plasmid DNA *in Vitro*. Apparent Spreading of Nucleosome Alignment from one Region of pBR327 by Histone H5, **222**, 1131–1147.
Poly[d(A-T)] and Other Synthetic Polydeoxynucleotides Containing Oligoadenosine Tracts form Nucleosomes Easily, **222**, 1149–1160.

Histone octamer
Can One Measure the Free Energy of Binding of the Histone Octamer to Different DNA Sequences by Salt-dependent Reconstitution?, **219**, 391–392.

Histone octamer mobility
Mobility of Positioned Nucleosomes on 5 S rDNA, **220**, 101–110.

HIV reverse transcriptase
Many Crystal Forms of Human Immunodeficiency Virus Reverse Transcriptase, **217**, 19–22.

HIV-1
Secondary Structure of the Ribonuclease H Domain of the Human Immunodeficiency Virus Reverse Transcriptase in Solution using Three-Dimensional Double and Triple Resonance Heteronuclear Magnetic Resonance Spectroscopy, **221**, 1081–1090.

HIV-1 RNase H mutants
Mutations of a Conserved Residue within HIV-1 Ribonuclease H Affect Its Exo-and Endonuclease Activities, **220**, 801–818.

HLA
Refined Structure of the Human Histocompatibility Antigen HLA-A2 at 2·6 Å Resolution, **219**, 277–319.

HlyB
Analysis of the Membrane Organization of an *Escherichia coli* Protein Translocator, HlyB, a Member of a Large Family of Prokaryote and Eukaryote Surface Transport Proteins, **217**, 441–454.

HMG proteins
Differentiation-dependent Alteration in the Chromatin Structure of Chromosomal Protein HMG-17 Gene During Erythropoiesis, **217**, 75–84.

hnRNP
Physical Studies of Tyrosine and Tryptophan Residues in Mammalian A1 Heterogeneous Nuclear Ribonucleoprotein. Support for a Segmented Structure, **221**, 693–709.

Holliday junction
Behavior of a Cross-linked Attachment Site: Testing the Role of Branch Migration in Site-specific Recombination, **220**, 621–629.
Effects of Base Mismatches on the Structure of the Four-way DNA junction, **221**, 147–161.
Model for the Interaction of DNA Junctions and Resolving Enzymes, **221**, 1191–1207.

Holliday junctions
Groove–Backbone Interaction in *B*-DNA. Implication for DNA Condensation and Recombination, **221**, 919–940.

Holliday structure
Parallel and Antiparallel Holliday Junctions Differ in Structure and Stability, **221**, 1419–1432.

Homeodomain
Crystallization and Preliminary X-ray Diffraction Studies of a MATα2-DNA Complex, **217**, 11–13.
Structure Determination of the *Antp(C39 → S)* Homeodomain from Nuclear Magnetic Resonance Data in Solution using a Novel Strategy for the Structure Calculation with the Programs DIANA, CALIBA, HABAS and GLOMSA, **217**, 531–540.

Homologous recombination
In Vitro Rescue of an Integrated Hybrid Adeno-associated Virus/Simian Virus 40 Genome, **218**, 791–804.
RecA-mediated Annealing of Single-stranded DNA and Its Relation to the Mechanism of Homologous Recombination, **221**, 131–145.

Homology
Amino Acid Substitution Matrices from an Information Theoretic Perspective, **219**, 555–565.

Homology modeling
A New Method for Building Protein Conformations from Sequence Alignments with Homologues of Known Structure, **217**, 1–7.
Three-dimensional Model for Stellacyanin, a "Blue" Copper-protein, **222**, 1053–1065.

Homology modelling
A Simple Method to Generate Non-trivial Alternate Alignments of Protein Sequences, **219**, 727–732.

Hormone storage
Crystals of a Bovine Neurophysin II Tripeptide Complex, **222**, 23–25.

Hormone–receptor complex
Crystals of the Complex between Human Growth Hormone and the Extracellular Domain of Its Receptor, **222**, 865–868.

hprt
Novel Mutational Spectrum Induced by *N*-methyl-*N'*-nitro-*N*-nitrosoguanidine in the Coding Region of the Hypoxanthine (Guanine) Phosphoribosyltransferase Gene in Diploid Human Fibroblasts, **221**, 421–430.

HRV14
Human Rhinovirus 14 Complexed with Antiviral Compound R 61837, **217**, 455–463.

HSP70 heat shock protein
Putative 65 kDa Protein of Beet Yellows Closterovirus Is a Homologue of HSP70 Heat Shock Proteins, **217**, 603–610.

HSV-1
A Predictive Model for DNA Recognition by the Herpes Simplex Virus Protein ICP4, **219**, 451–470.

HU proteins
DNA-bending Properties of TF1, **221**, 777–794.

Human antibodies
By-passing Immunization. Human Antibodies from V-gene Libraries Displayed on Phage, **222**, 581–597.

Human genes
Prediction of Human mRNA Donor and Acceptor Sites from the DNA Sequence, **220**, 49–65.

Human genome project
A New Family of Powerful Multivariate Statistical Sequence Analysis Techniques, **220**, 877–887.

Human growth hormone
Crystals of the Complex between Human Growth Hormone and the Extracellular Domain of Its Receptor, **222**, 865–868.

Human liver
Preparation of Human Manganese Superoxide Dismutase by Tri-phase Partitioning and Preliminary Crystallographic Data, **219**, 103–108.

Human thioredoxin
Determination of the Positions of Bound Water Molecules in the Solution Structure of Reduced Human Thioredoxin by Heteronuclear Three-dimensional Nuclear Magnetic Resonance Spectroscopy, **220**, 209–216.

Hybrid histone octamers
Extended C-Terminal Tail of Wheat Histone H2A Interacts with DNA of the "Linker" Region, **218**, 805–813.

Hybridization
Use of High Coverage Reference Libraries of *Drosophila melanogaster* for Relational Data Analysis. A Step Towards Mapping and Sequencing of the Genome, **220**, 903–914.

Hydrocarbon model
Is the Hydrophobic Effect Stabilizing or Destabilizing in Proteins? The Contribution of Disulphide Bonds to Protein Stability, **217**, 389–398.

Hydrodynamic modelling
Solution Structure of Human and Mouse Immunoglobulin M by Synchrotron X-ray Scattering and Molecular Graphics Modelling. A Possible Mechanism for Complement Activation, **221**, 1345–1366.

Hydrogen bonding
Neutron Diffraction Study of Carbonmonoxymyoglobin, **220**, 381–399.
Analysis of Protein Main-chain Solvation as a Function of Secondary Structure, **221**, 669–691.

Hydrogen bonds
The Refined Structure of the Complex between Adenylate Kinase from Beef Heart Mitochondrial Matrix and its Substrate AMP at 1·85 Å Resolution, **217**, 541–549.
A Nuclear Magnetic Resonance Study of the Hydrogen-Exchange Behaviour of Lysozyme in Crystals and Solution, **218**, 413–426.

Hydrogen exchange
Stable Submolecular Folding Units in a Non-compact Form of Cytochrome *c*, **221**, 1045–1061.

Hydrophobic core
The Role of Internal Packing Interactions in Determining the Structure and Stability of a Protein, **219**, 359–376.

Hydrophobic effect
Is the Hydrophobic Effect Stabilizing or Destabilizing in Proteins? The Contribution of Disulphide Bonds to Protein Stability, **217**, 389–398.

Hydrophobic effects
Solid Model Compounds and the Thermodynamics of Protein Unfolding, **222**, 699–709.

Hydrophobic interactions
Aromatic–Aromatic Interactions and Protein Stability. Investigation by Double-mutant Cycles, **218**, 465–475.

Hydrophobicity
Structural and Thermodynamic Analysis of the Packing of Two α-Helices in Bacteriophage T4 Lysozyme, **221**, 647–667.

Hydroxyl radical footprinting
Development of RNA Polymerase-Promoter Contacts during Open Complex Formation, **220**, 585–597.

Hydroxylation
Molecular Characterization of Cuticle and Interstitial Collagens from Worms Collected at Deep Sea Hydrothermal Vents, **221**, 209–223.

Hypersensitive sites
Conserved Chromatin Structure in c-*myc* 5′-Flanking DNA after Viral Transduction, **222**, 45–57.

1,5-IAEDANS
Fluorescence Energy Transfer Distance Measurements Using Site-directed Single Cysteine Mutants. The Membrane Insertion of Colicin A, **218**, 639–653.

IF2
A Severely Truncated Form of Translational Initiation Factor 2 Supports Growth of *Escherichia coli*, **220**, 335–349.

IgG
Structure of Immunoglobulin G by Scanning Tunnelling Microscopy, **221**, 361–365.

IgG-binding (protein)
Crystallization and Preliminary X-ray Analysis of Gc, the Vitamin D-binding Protein in Serum, **220**, 545–547.

IL8
Comparison of the Solution Nuclear Magnetic Resonance and Crystal Structures of Interleukin-8. Possible Implications for the Mechanism of Receptor Binding, **217**, 611–620.

Image analysis
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interactions with RNA. I. Cryoelectron Microscopic Studies, **221**, 1127–1138.

Imidazole
X-ray Crystal Structure of the Ferric Sperm Whale Myoglobin : Imidazole Complex at 2·0 Å Resolution, **217**, 409–412.

Immediate early genes
A Predictive Model for DNA Recognition by the Herpes Simplex Virus Protein ICP4, **219**, 451–470.

Immune system
Refined Structure of the Human Histocompatibility Antigen HLA-A2 at 2·6 Å Resolution, **219**, 277–319.

Immunity
Mutations in the Inverted Repeats of Tn*3* Affect Binding of Transposase and Transposition Immunity, **218**, 335–347.

Immunity proteins
Individual Domains of Colicins Confer Specificity in Colicin Uptake, in Pore-properties and in Immunity Requirement, **217**, 429–439.

Immunoglobulin
Biochemical Implications from the Variable Gene Sequences of an Anti-cytochrome *c* Antibody and Crystallographic Characterization of its Antigen-binding Fragment in Free and Antigen-complexed Forms, **221**, 455–462.
Characterization of Crystals of an Intact Monoclonal Antibody for Canine Lymphoma, **222**, 17–19.

Immunoglobulin G
Structure of Immunoglobulin G by Scanning Tunnelling Microscopy, **221**, 361–365.

Immunoglobulin M
Solution Structure of Human and Mouse Immunoglobulin M by Synchrotron X-ray Scattering and Molecular Graphics Modelling. A Possible Mechanism for Complement Activation, **221**, 1345–1366.

Import into mitochondria
MRS3 and MRS4, Two Suppressors of mtRNA Splicing Defects in Yeast, are New Members of the Mitochondrial Carrier Family, **217**, 23–37.

***In vitro* transcription**
Structure of the Core Promoter of Human and Mouse Ribosomal RNA Gene. Asymmetry of Species-specific Transcription, **218**, 55–67.

***in Vivo* supercoiling**
Torsionally Tuned Cruciform and *Z*-DNA Probes for Measuring Unrestrained Supercoiling at Specific Sites in DNA of Living Cells, **221**, 107–129.

Indirect activation
RNA Polymerase Bound to the P_R Promoter of Bacteriophage λ Inhibits Open Complex Formation at the Divergently Transcribed P_{RM} Promoter. Implications for an Indirect Mechanism of Transcriptional Activation by λ Repressor, **222**, 479–494.

Individual amide hydrogen exchange
A Nuclear Magnetic Resonance Study of the Hydrogen-Exchange Behaviour of Lysozyme in Crystals and Solution, **218**, 413–426.

Influenza
Three-dimensional Structure of the Neuraminidase of Influenza Virus A/Tokyo/3/67 at 2·2 Å Resolution, **221**, 473–486.
Refined Atomic Structures of N9 Subtype Influenza Virus Neuraminidase and Escape Mutants, **221**, 487–497.

Infrared spectroscopy
Aggregation and Secondary Structure of Synthetic Amyloid βA4 Peptides of Alzheimer's Disease, **218**, 149–163.

Inhibition
Refined Structure of the Hirudin–Thrombin Complex, **221**, 583–601.

Inhibition of RNA modification
Developmental Regulation of Covalent Modification of Double-stranded RNA during Silkmoth Oogenesis, **218**, 517–527.

Inhibitor
Molecular Recognition. Conformational Analysis of Limited Proteolytic Sites and Serine Proteinase Protein Inhibitors, **220**, 507–530.
Refined X-ray Crystal Structures of the Reactive Site Modified Ovomucoid Inhibitor Third Domains from Silver Pheasant (OMSVP3*) and from Japanese Quail (OMJPQ3*), **220**, 739–755.

Inhibitor complex
New Crystal Form of Cytosolic Chicken Asparate Aminotransferase Suitable for High-resolution X-ray Analysis, **221**, 61–63.

Initiation complex
Escherichia coli σ^{70} and NusA Proteins. I. Binding Interactions with Core RNA Polymerase in Solution and Within the Transcription Complex, **220**, 307–324.
The *Staphylococcus aureus* Mutation *pcrA3* Leads to the Accumulation of pT181 Replication Initiation Complexes, **221**, 1183–1189.

Initiation mutant
The Stringent Response Blocks DNA Replication Outside the *ori* Region in *Bacillus subtilis* and at the Origin in *Escherichia coli*, **219**, 605–613.

Insertion sequence
Programmed Translational Frameshifting and Initiation at an AUU Codon in Gene Expression of Bacterial Insertion Sequence IS*911*, **222**, 465–477.

Insulin
Proton Nuclear Magnetic Resonance Study of the B9(Asp) Mutant of Human Insulin. Sequential Assignment and Secondary Structure, **218**, 221–231.
X-ray Analysis of a Single Chain B29–A1 Peptide-linked Insulin Molecule. A Completely Inactive Analogue, **220**, 425–433.

Insulin activity
X-ray Analysis of a Single Chain B29–A1 Peptide-linked Insulin Molecule. A Completely Inactive Analogue, **220**, 425–433.

Insulin receptor binding
X-ray Analysis of a Single Chain B29–A1 Peptide-linked Insulin Molecule. A Completely Inactive Analogue, **220**, 425–433.

Integral membrane proteins
Crystals of an Integral Membrane Protein Diffracting to 1·8 Å Resolution, **217**, 9–10.

Integration of phage λ
Effects of Base Mismatches on the Structure of the Four-way DNA junction, **221**, 147–161.

Interaction
Involvement of "Hinge" Nucleotides of *Xenopus laevis* 5 S rRNA in the RNA Structural Organization and in the Binding of Transcription Factor TFIIIA, **218**, 69–81.

π–π interaction
π–π Interactions: the Geometry and Energetics of Phenylalanine–Phenylalanine Interactions in Proteins, **218**, 837–846.

Intercalation
DNA–Drug Interactions. The Crystal Structures of d(TGTACA) and d(TGATCA) Complexed with Daunomycin, **222**, 167–177.

Interface
Refined 1·83 Å Structure of Trypanosomal Triosephosphate Isomerase Crystallized in the Presence of 2·4 M-Ammonium Sulphate. A Comparison with the Structure of the Trypanosomal Triosephosphate Isomerase–Glycerol-3-phosphate Complex, **220**, 995–1015.

Interleukin 4
Crystallization and Preliminary X-ray Investigation of Recombinant Human Interleukin 4, **218**, 675–678.

Interleukin-1β
Comparison of the Solution Nuclear Magnetic Resonance and X-ray Crystal Structures of Human Recombinant Interleukin-1β, **221**, 47–53.

Intermediates
Kinetic Analysis of the Acid and the Alkaline Unfolded States of Staphylococcal Nuclease, **220**, 771–778.

Inter-species conservation
Characterization of the *POL3* Gene Product from *Schizosaccharomyces pombe* Indicates Inter-species Conservation of the Catalytic Subunit of DNA Polymerase δ, **222**, 209–218.

Intronic gene
Characterization of the Memory Gene Dunce of *Drosophila melanogaster*, **222**, 553–565.

Introns
Incipient Mitochondrial Evolution in Yeasts. II. The Complete Sequence of the Gene Coding for Cytochrome *b* in *Saccharomyces douglasii* Reveals the Presence of Both New and Conserved Introns and Disclosed Major Differences in the Fixation of Mutations in Evolution, **218**, 747–760.
Genomic Structure of *Chlamydomonas* Caltractin. Evidence for Intron Insertion Suggests a Probable Geneology for the EF-hand Superfamily of Proteins, **221**, 175–191.

Intron-splicing
Prediction of Human mRNA Donor and Acceptor Sites from the DNA Sequence, **220**, 49–65.

Inverted repeat
A Large Number of tRNA Genes are Symmetrically Located in Fission Yeast Centromeres, **218**, 13–17.
Mutations in the Inverted Repeats of Tn*3* Affect Binding of Transposase and Transposition Immunity, **218**, 335–347.

Ion channel
Crystallization and Preliminary X-ray Analysis of Phosphoporin from the Outer Membrane of *Escherichia coli*, **222**, 881–884.

Ion channels
Mutations in the MotA Protein of *Escherichia coli* Reveal Domains Critical for Proton Conduction, **221**, 1433–1442.

Ion-binding
Location of Ion-binding Sites in the Gramicidin Channel by X-ray Diffraction, **218**, 847–858.

Iron biomineralization
Influence of Site-directed Modifications on the Formation of Iron Cores in Ferritin, **221**, 1443–1452.

Iron storage proteins
Influence of Site-directed Modifications on the Formation of Iron Cores in Ferritin, **221**, 1443–1452.

IS*3* family
Programmed Translational Frameshifting and Initiation at an AUU Codon in Gene Expression of Bacterial Insertion Sequence IS*911*, **222**, 465–477.

Isocitrate lyase
Use of Chemical Modification in the Crystallization of Isocitrate Lyase from *Escherichia coli*, **220**, 13–16.

Isoforms
Identification and Characterization of *Drosophila melanogaster* Paramyosin, **220**, 687–700.

Isolation
Crystallization and Preliminary X-ray Crystallographic Studies of CO-hemoglobin from the North Atlantic Salmon (*Salmo salar*), **220**, 829–830.

Jacalin
Preparation and X-ray Characterization of Four New Crystal Forms of Jacalin, a Lectin from *Artocarpus integrifolia*, **221**, 773–776.

Joint molecules
The Effects on Strand Exchange of 5′ *Versus* 3′ Ends of Single-stranded DNA in RecA Nucleoprotein Filaments, **219**, 645–654.

Kazal family trypsin inhibitors
A New Method for Building Protein Conformations from Sequence Alignments with Homologues of Known Structure, **217**, 1–7.

Kazal inhibitors
Effect of Single Amino Acid Replacements on the Thermodynamics of the Reactive Site Peptide Bond Hydrolysis in Ovomucoid Third Domain, **220**, 1041–1053.

Kinase
Crystallization and Preliminary X-ray Diffraction Analysis of Nucleoside Diphosphate Kinase from *Myxococcus xanthus*, **220**, 5–7.

3-phosphoglycerate kinase
Relation Between Stability, Dynamics and Enzyme Activity in 3-Phosphoglycerate Kinases from Yeast and *Thermus thermophilus*, **220**, 531–538.

Kinetics
Allosteric Transition in Triply Met-Haemoglobin, **217**, 303–306.
Factor-independent Activation of *Escherichia coli* rRNA Transcription. I. Kinetic Analysis of the Roles of the Upstream Activator Region and Supercoiling on Transcription of the *rrnB* P1 Promoter *in Vitro*, **220**, 555–568.
Kinetic Analysis of the Acid and the Alkaline Unfolded States of Staphylococcal Nuclease, **220**, 771–778.

Klebsiella pneumoniae
Two MalT Binding Sites in Direct Repeat. A Structural Motif Involved in the Activation of All the Promoters of the Maltose Regulons in *Escherichia coli* and *Klebsiella pneumoniae*, **218**, 323–334.

Kringle
Structure of Bovine Prothrombin Fragment 1 Refined at 2·25 Å Resolution, **220**, 481–494.

Kringle 2 binding site
Solution Structure of the Tissue-type Plasminogen Activator Kringle 2 Domain Complexed to 6-Aminohexanoic Acid an Antifibrinolytic Drug, **222**, 1035–1051.

Kringle 2 n.m.r. solution structure
Solution Structure of the Tissue-type Plasminogen Activator Kringle 2 Domain Complexed to 6-Aminohexanoic Acid an Antifibrinolytic Drug, **222**, 1035–1051.

L1
Composite of A and F-type 5′ Terminal Sequences Defines a Subfamily of Mouse LINE-1 Elements, **221**, 367–373.

L1 repetitive elements
Mitochondrial D-loop Sequences are Integrated in the Rat Nuclear Genome, **221**, 1223–1235.

***lac* promoter**
Synthetic DNA Bending Sequences Increase the Rate of *in Vitro* Transcription Initiation at the *Escherichia coli lac* Promoter, **219**, 217–230.
An *Escherichia coli rpoB* Mutation that Inhibits Transcription of Catabolite-sensitive Operons, **222**, 189–196.

Lac repressor
The Roles of Residues 5 and 9 of the Recognition Helix of Lac Repressor in *lac* Operator Binding, **218**, 313–321.

***lac* repressor**
Controlling Basal Expression in an Inducible T7 Expression System by Blocking the Target T7 Promoter with *lac* Repressor, **219**, 45–59.
Creation of a T7 Autogene. Cloning and Expression of the Gene for Bacteriophage T7 RNA Polymerase under Control of Its Cognate Promoter, **219**, 61–68.
DNA Looping Alters Local Conformation during Transcription, **219**, 615–622.

α-lactalbumin
Crystal Structure of Human α-Lactalbumin at 1·7 Å Resolution, **221**, 571–581.

β-lactam resistance
Refined Crystal Structure of β-Lactamase from *Staphylococcus aureus* PC1 at 2·0 Å Resolution, **217**, 701–719.

β-lactamase
Refined Crystal Structure of β-Lactamase from *Staphylococcus aureus* PC1 at 2·0 Å Resolution, **217**, 701–719.

Lactate dehydrogenase
Analysis of Protein Loop Closure. Two Types of Hinges Produce One Motion in Lactate Dehydrogenase, **220**, 133–149.

Lactoferrin
Preliminary Crystallographic Studies of Copper(II)-and Oxalate-substituted Human Lactoferrin, **219**, 155–159.

lacZ
Transcriptional Organization of the *Escherichia coli dnaX* Gene, **220**, 649–658.

***lacZ* fusions**
Bacterial Expression of Rat Liver Succinyl-CoA Synthetase α-Subunit, **219**, 165–174.

Large subunit rRNA gene
Six Group I Introns and Three Internal Transcribed Spacers in the Chloroplast Large Subunit Ribosomal RNA Gene of the Green Alga *Chlamydomonas eugametos*, **218**, 293–311.

Large-insert clones
Mapping Using Unique Sequences, **217**, 259–264.

Lattice models
Protein Folding. Effect of Packing Density on Chain Conformation, **219**, 109–122.

Lead-induced cleavage
Determination of an RNA Structure Involved in Splicing Inhibition of a Muscle-specific Exon, **221**, 837–856.

Learning
Characterization of the Memory Gene Dunce of *Drosophila melanogaster*, **222**, 553–565.

Lectin
Crystallization and Preliminary X-ray Analysis of Peanut Agglutinin–N^6-benzylaminopurine Complex, **219**, 151–153.

Leucine zipper
Characterization and Sequence of the *Escherichia coli* Stress-induced *psp* Operon, **220**, 35–48.

Ligand
Allosteric Transition in Triply Met-Haemoglobin, **217**, 303–306.

Ligand-binding
Crystallization and Preliminary X-ray Diffraction Study of the Ligand-binding Domain of the Bacterial Chemotaxis-mediating Aspartate Receptor of *Salmonella typhimurium*, **221**, 31–34.

Ligand-induced DNA association
Nature of Protamine–DNA Complexes. A Special Type of Ligand Binding Co-operativity, **222**, 423–433.

Light scattering
Assembly of *Octopus dofleini* Hemocyanin. A Study of the Kinetics by Sedimentation, Light Scattering and Electron Microscopy, **217**, 307–321.

Light-harvesting complex
High-resolution Electron Crystallography of Light-harvesting Chlorophyll *a/b*-Protein Complex in Three Different Media, **217**, 691–699.

Light-sensitive mutant
Isolation and Characterization of Visible Light-sensitive Mutants of *Escherichia coli* K12, **219**, 393–398.

Limited proteolysis
Refined X-ray Crystal Structures of the Reactive Site Modified Ovomucoid Inhibitor Third Domains from Silver Pheasant (OMSVP3*) and from Japanese Quail (OMJPQ3*), **220**, 739–755.
Role of the Disordered Terminal Regions of Flagellin in Filament Formation and Stability, **221**, 1461–1474.

LINE-1 repetitive DNA
Systematic Identification of LINE-1 Repetitive DNA Sequence Differences Having Species Specificity Between *Mus spretus* and *Mus domesticus*, **219**, 635–643.

Linear DNA replication
Sequence Requirements for Protein-primed DNA Replication of Bacteriophage PRD1, **218**, 779–789.
Initiation of Bacteriophage PRD1 DNA Replication on Single-stranded Templates, **222**, 127–131.

Linker histone
Chromatosome Positioning on Assembled Long Chromatin. Linker Histones Affect Nucleosome Placement on 5 S rDNA, **220**, 89–100.

Linking clone
Complete Physical Map of the *Bacillus subtilis* 168 Chromosome Constructed by a Gene-directed Mutagenesis Method, **220**, 631–648.

Lipase
Multiple Crystal Forms of Lipases from *Geotrichum candidum*, **220**, 541–543.
Preliminary Investigation of Crystals of the Neutral Lipase from *Pseudomonas fluorescens*, **222**, 21–22.

Lipid
Co-crystals of Gramicidin A and Phospholipid. A System for Studying the Structure of a Transmembrane Channel, **217**, 625–627.

Lipoamide dehydrogenase
Refined Crystal Structure of Lipoamide Dehydrogenase from *Azotobacter vinelandii* at 2·2 Å Resolution. A Comparison with the Structure of Glutathione Reductase, **220**, 975–994.

Liquid crystal
Supramolecular Organization of Double-stranded DNA Molecules in the Columnar Hexagonal Liquid Crystalline Phase. An Electron Microscopic Analysis Using Freeze-fracture Methods, **218**, 165–181.

Lithium
Lithium Increases Actin Polymerization Rates by Enhancing the Nucleation Step, **217**, 401–404.

Liver specificity
NFY or a Related CCAAT Binding Factor Can Be Replaced by Other Transcriptional Activators for Cooperation with HNF1 in Driving the Rat Albumin Promoter *in Vivo*, **222**, 31–43.

LL1β
Selection of Antibody Ligands from a Large Library of Oligopeptides Expressed on a Multivalent Exposition Vector, **222**, 301–310.

Local helix geometry
Structure of *B*-DNA Decamer C-C-A-A-C-G-T-T-G-G and Comparison with Isomorphous Decamers C-C-A-A-G-A-T-T-G-G and C-C-A-G-G-C-C-T-G-G, **217**, 177–199.

Loop closure
Analysis of Protein Loop Closure. Two Types of Hinges Produce One Motion in Lactate Dehydrogenase, **220**, 133–149.

Loop tension
A Simplified Mechanical Model of Proteins Tested on the Globin Fold, **222**, 805–817.

Loops
AraC–DNA Looping: Orientation and Distance-dependent Loop Breaking by the Cyclic AMP Receptor Protein, **218**, 45–54.
β-Breakers: An Aperiodic Secondary Structure, **221**, 603–613.

Lucina pectinata
Crystallization of a Complex of Hemoglobin Components II and III of the Symbiont-harboring Clam *Lucina pectinata*, **222**, 463–464.

***Lucina pectinata* Hb I**
Crystallization and Preliminary Data for the Ferric Form of *Lucina pectinata* Hemoglobin I, **222**, 447–449.

Luminescence
Identification of the Acyl Transfer Site of Fatty Acyl-protein Synthetase from Bioluminescent Bacteria, **219**, 69–77.

Lymphokine
Low-resolution Structure of Recombinant Human Granulocyte–Macrophage Colony Stimulating Factor, **221**, 55–60.

Lysis protein
Construction, Expression and Release of Hybrid Colicins, **217**, 421–428.

Lysozyme
Structural and Thermodynamic Analysis of the Packing of Two α-Helices in Bacteriophage T4 Lysozyme, **221**, 647–667.
Cumulative Site-directed Charge–Change Replacements in Bacteriophage T4 Lysozyme Suggest that Long-range Electrostatic Interactions Contribute Little to Protein Stability, **221**, 873–887.

Lysyl-tRNA synthetase
Structure and Evolution of a Group of Related Aminoacyl-tRNA Synthetases, **218**, 557–568.

M1 RNA
Kinetics of the Processing of the Precursor to 4·5 S RNA, a Naturally Occurring Substrate for RNase P from *Escherichia coli*, **221**, 1–5.

Machine learning
Identifying Potential tRNA Genes in Genomic DNA Sequences, **220**, 659–671.

Macromolecular crowding
Estimation of Macromolecule Concentrations and Excluded Volume Effects for the Cytoplasm of *Escherichia coli*, **222**, 599–620.

Major capsid protein
Selection of Antibody Ligands from a Large Library of Oligopeptides Expressed on a Multivalent Exposition Vector, **222**, 301–310.

Malate dehydrogenase
Purification and Crystallization of Recombinant *Escherichia coli* Malate Dehydrogenase, **220**, 551–553.
Preliminary X-ray Diffraction Analysis of a Crystallizable Mutant of Malate Dehydrogenase from the Thermophile *Thermus flavus*, **221**, 383–385.

Maltose regulon
Two MalT Binding Sites in Direct Repeat. A Structural Motif Involved in the Activation of All the Promoters of the Maltose Regulons in *Escherichia coli* and *Klebsiella pneumoniae*, **218**, 323–334.

Manganese(II)
Manganese Superoxide Dismutase from *Thermus thermophilus*. A Structural Model Refined at 1·8 Å Resolution, **219**, 335–358.

Manganese(III)
Manganese Superoxide Dismutase from *Thermus thermophilus*. A Structural Model Refined at 1·8 Å Resolution, **219**, 335–358.

Mapping
Use of High Coverage Reference Libraries of *Drosophila melanogaster* for Relational Data Analysis. A Step Towards Mapping and Sequencing of the Genome, **220**, 903–914.

Mapping chromosome
Detailed Physical Map and Set of Overlapping Clones Covering the Genome of the Archaebacterium *Haloferax volcani* DS2, **222**, 509–524.

MATα2
Crystallization and Preliminary X-ray Diffraction Studies of a MATα2–DNA Complex, **217**, 11–13.

MDH
Purification and Crystallization of Recombinant *Escherichia coli* Malate Dehydrogenase, **220**, 551–553.

MDHase
Purification and Crystallization of Recombinant *Escherichia coli* Malate Dehydrogenase, **220**, 551–553.

Mdr
Analysis of the Membrane Organization of an *Escherichia coli* Protein Translocator, HlyB, a Member of a Large Family of Prokaryote and Eukaryote Surface Transport Proteins, **217**, 441–454.

Megaplasmids
Detailed Physical Map and Set of Overlapping Clones Covering the Genome of the Archaebacterium *Haloferax volcani* DS2, **222**, 509–524.

MEL cells
Regulation of Histone $H1^0$ Accumulation During Induced Differentiation of Murine Erythroleukemia Cells, **217**, 85–92.

Membrane
Location of Ion-binding Sites in the Gramicidin Channel by X-ray Diffraction, **218**, 847–858.
Structure of Soluble and Membrane-bound Human Annexin V, **220**, 199–203.

Membrane insertion
Fluorescence Energy Transfer Distance Measurements Using Site-directed Single Cysteine Mutants. The Membrane Insertion of Colicin A, **218**, 639–653.

Membrane protein
Proline Kinks in Transmembrane α-Helices, **218**, 499–503.
Supercoiling is Essential for the Formation and Stability of the Initiation Complex at the Divergent *malEp* and *malKp* Promoters, **218**, 529–542.
Crystallization and Preliminary X-ray Crystallographic Studies of Bovine Heart Mitochondrial Cytochrome bc_1 Complex, **221**, 379–382.
Crystallization and Preliminary X-ray Analysis of Phosphoporin from the Outer Membrane of *Escherichia coli*, **222**, 881–884.

Membrane protein crystallization
High-resolution Electron Crystallography of Light-harvesting Chlorophyll *a*/*b*-Protein Complex in Three Different Media, **217**, 691–699.

Membrane protein crystals
Crystals of an Integral Membrane Protein Diffracting to 1·8 Å Resolution, **217**, 9–10.

Membrane proteins
Trigonal Crystals of Porin from *Escherichia coli*, **218**, 505–507.
X-ray Solution Scattering of Sindbis Virus. Changes in Conformation Induced at Low pH, **221**, 39–42.
Mutations in the MotA Protein of *Escherichia coli* Reveal Domains Critical for Proton Conduction, **221**, 1433–1442.

Membrane topology
Analysis of the Membrane Organization of an *Escherichia coli* Protein Translocator, HlyB, a Member of a Large Family of Prokaryote and Eukaryote Surface Transport Proteins, **217**, 441–454.

Membrane translocation
Crystallization of Diphtheria Toxin, **222**, 861–864.

Membranes
Co-crystals of Gramicidin A and Phospholipid. A System for Studying the Structure of a Transmembrane Channel, **217**, 625–627.
Detection of Transmembrane Linkages between Immunoglobulin or Complement Receptors and the Neutrophil's Cortical Microfilaments by Resonance Energy Transfer Microscopy, **218**, 263–268.
X-ray Solution Scattering of Sindbis Virus. Changes in Conformation Induced at Low pH, **221**, 39–42.

Memory
Characterization of the Memory Gene Dunce of *Drosophila melanogaster*, **222**, 553–565.

Metabolic buffering
Estimation of Macromolecule Concentrations and Excluded Volume Effects for the Cytoplasm of *Escherichia coli*, **222**, 599–620.

Metal binding
Construction of New Ligand Binding Sites in Proteins of Known Structure. I. Computer-aided Modeling of Sites with Pre-defined Geometry, **222**, 763–785.
Construction of New Ligand Binding Sites in Proteins of Known Structure. II. Grafting of a Buried Transition Metal Binding Site into *Escherichia coli* Thioredoxin, **222**, 787–803.

Metal decoration
Correlation of Metal Decoration and Topochemistry on Protein Surfaces, **221**, 637–645.

Metal ion catalysis
Reaction Mechanism of Alkaline Phosphatase Based on Crystal Structures. Two-metal Ion Catalysis, **218**, 449–464.

Metalloenzyme
Reaction Mechanism of Alkaline Phosphatase Based on Crystal Structures. Two-metal Ion Catalysis, **218**, 449–464.

Metal-sulfur clusters
Refined Crystal Structure of Cd, Zn Metallothionein at 2·0 Å Resolution, **221**, 1269–1293.

Met-haemoglobin
Allosteric Transition in Triply Met-Haemoglobin, **217**, 303–306.

Methionine activation
Lysine 335, Part of the KMSKS Signature Sequence, Plays a Crucial Role in the Amino Acid Activation Catalysed by the Methionyl-tRNA Synthetase from *Escherichia coli*, **217**, 465–475.

Methionyl-tRNA synthetase
Lysine 335, Part of the KMSKS Signature Sequence, Plays a Crucial Role in the Amino Acid Activation Catalysed by the Methionyl-tRNA Synthetase from *Escherichia coli*, **217**, 465–475.
Binding of the Anticodon Domain of $tRNA_f^{Met}$ to *Escherichia coli* Methionyl-tRNA Synthetase, **220**, 205–208.

Methoxyamine
Molecular Basis for Methoxyamine Initiated Mutagenesis ^{1}H Nuclear Magnetic Resonance Studies of Base-modified Oligodeoxynucleotides, **222**, 711–723.

Methylation signals
The Recognition of Unusual DNA Structures by Human DNA(cytosine-5)methyltransferase, **217**, 39–51.

***Methylobacterium extorquens* AM1**
Preliminary Crystallographic Study of a Pseudoazurin from Methylotrophic Bacterium, *Methylobacterium extorquens* AM1, **218**, 19–20.

Methyltransferase
The Recognition of Unusual DNA Structures by Human DNA(cytosine-5)methyltransferase, **217**, 39–51.

miaA
tRNA Anticodons with the Modified Nucleoside 2-Methylthio-N^6-(4-hydroxyisopentenyl)adenosine Distinguish Between Bases 3′ of the Codon, **218**, 509–516.

Micrococcus luteus
Novel Anticodon Composition of Transfer RNAs in *Micrococcus luteus*, a Bacterium with a High Genomic G + C Content. Correlation with Codon Usage, **221**, 387–401.

Microfilaments
Detection of Transmembrane Linkages between Immunoglobulin or Complement Receptors and the Neutrophil's Cortical Microfilaments by Resonance Energy Transfer Microscopy, **218**, 263–268.

β_2-microglobulin
Refined Structure of the Human Histocompatibility Antigen HLA-A2 at 2·6 Å Resolution, **219**, 277–319.

Microscopy
Detection of Transmembrane Linkages between Immunoglobulin or Complement Receptors and the Neutrophil's Cortical Microfilaments by Resonance Energy Transfer Microscopy, **218**, 263–268.

Milk protein
Crystal Structure of Human α-Lactalbumin at 1·7 Å Resolution, **221**, 571–581.

Mineral
Three-dimensional Spatial Relationship between the Collagen Fibrils and the Inorganic Calcium Phosphate Crystals of Pickerel (*Americanus americanus*) and Herring (*Clupea harengus*) Bone, **217**, 487–501.

Mini-myoglobin
Mini-myoglobin. Electron Paramagnetic Resonance and Reversible Oxygenation of the Cobalt Derivative, **222**, 637–643.

Mini-proinsulin
X-ray Analysis of a Single Chain B29–A1 Peptide-linked Insulin Molecule. A Completely Inactive Analogue, **220**, 425–433.

Minor groove contacts
DNase I-induced DNA Conformation. 2 Å Structure of a DNase I–Octamer Complex, **222**, 645–667.

Mitochondria
Electron Microscopic Analysis of the Peripheral and Membrane Parts of Mitochondrial NADH Dehydrogenase (Complex I), **221**, 1027–1043.

Mitochondrial carrier protein
MRS3 and MRS4, Two Suppressors of mtRNA Splicing Defects in Yeast, are New Members of the Mitochondrial Carrier Family, **217**, 23–37.

Mitochondrial genomes
Incipient Mitochondrial Evolution in Yeasts. I. The Physical Map and Gene Order of *Saccharomyces douglasii* Mitochondrial DNA Discloses a Translocation of a Segment of 15,000 Base-pairs and the Presence of New Introns in Comparison with *Saccharomyces cerevisiae*, **218**, 735–746.

Mitochondrial replication origin
Mitochondrial D-loop Sequences are Integrated in the Rat Nuclear Genome, **221**, 1223–1235.

Mitochondrial respiratory chain
Crystallization and Preliminary X-ray Crystallographic Studies of Bovine Heart Mitochondrial Cytochrome bc_1 Complex, **221**, 379–382.

Mitochondrial-like DNA
Mitochondrial-like DNA Sequences Flanked by Direct and Inverted Repeats in the Nuclear Genome of *Toxoplasma gondii*, **222**, 525–536.

Mitogillin
Crystallization and Preliminary Characterization of Mitogillin, a Ribosomal Ribonuclease from *Aspergillus restrictus*, **218**, 489–492.

Mn superoxide dismutase
Preparation of Human Manganese Superoxide Dismutase by Tri-phase Partitioning and Preliminary Crystallographic Data, **219**, 103–108.

MNNG
Novel Mutational Spectrum Induced by *N*-methyl-*N*′-nitro-*N*-nitrosoguanidine in the Coding Region of the Hypoxanthine (Guanine) Phosphoribosyltransferase Gene in Diploid Human Fibroblasts, **221**, 421–430.

Mobility
Conformation and Mobility of the RNA-binding N-Terminal Part of the Intact Coat Protein of Cowpea Chlorotic Mottle Virus. A Two-dimensional Proton Nuclear Magnetic Resonance Study, **220**, 701–709.

Mobility shift assay
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. II. Stability and Some Properties of Elongation Complexes, **221**, 1111–1125.

Model compounds
Solid Model Compounds and the Thermodynamics of Protein Unfolding, **222**, 699–709.

Modeling
Three-dimensional Model of *Escherichia coli* Ribosomal 5 S RNA as Deduced from Structure Probing in Solution and Computer Modeling, **221**, 293–308.

Modified bases
Molecular Basis for Methoxyamine Initiated Mutagenesis ^{1}H Nuclear Magnetic Resonance Studies of Base-modified Oligodeoxynucleotides, **222**, 711–723.

Module
Domain Structure and Interactions of the Type I and Type II Modules in the Gelatin-binding Region of Fibronectin. All Six Modules Are Independently Folded, **217**, 563–575.
Evidence for an Ancestral Core Structure in Nucleotide-binding Proteins with the Type A Motif, **221**, 751–754.

Molecular docking
"Soft Docking": Matching of Molecular Surface Cubes, **219**, 79–102.

Molecular dynamics
Real-time Interactive Frequency Filtering of Molecular Dynamics Trajectories, **220**, 1–4.
Are Time-averaged Restraints Necessary for Nuclear Magnetic Resonance Refinement? A Model Study for DNA, **220**, 457–479.
Solution Structure of $[d(GTATATAC)]_2$ *via* Restrained Molecular Dynamics Simulations with Nuclear Magnetic Resonance Constraints Derived from Relaxation Matrix Analysis of Two-dimensional Nuclear Overhauser Effect Experiments, **221**, 271–292.
An Axial Binding Site in the *Tetrahymena* Precursor RNA, **222**, 995–1012.

Molecular dynamics refinement
Refined Crystal Structure of Lipoamide Dehydrogenase from *Azotobacter vinelandii* at 2·2 Å Resolution. A Comparison with the Structure of Glutathione Reductase, **220**, 975–994.

Molecular evolution
Characterization of the *POL3* Gene Product from *Schizosaccharomyces pombe* Indicates Inter-species Conservation of the Catalytic Subunit of DNA Polymerase δ, **222**, 209–218.

Molecular graphics
Solution Structure of Human and Mouse Immunoglobulin M by Synchrotron X-ray Scattering and Molecular Graphics Modelling. A Possible Mechanism for Complement Activation, **221**, 1345–1366.

Molecular modeling
Construction of New Ligand Binding Sites in Proteins of Known Structure. I. Computer-aided Modeling of Sites with Pre-defined Geometry, **222**, 763–785.
Construction of New Ligand Binding Sites in Proteins of Known Structure. II. Grafting of a Buried Transition Metal Binding Site into *Escherichia coli* Thioredoxin, **222**, 787–803.

Molecular packing
Analysis of Structural Design Features in Collagen, **218**, 209–219.

Molecular phylogenetic trees
Systematic Identification of LINE-1 Repetitive DNA Sequence Differences Having Species Specificity Between *Mus spretus* and *Mus domesticus*, **219**, 635–643.

Molecular recognition
"Soft Docking": Matching of Molecular Surface Cubes, **219**, 79–102.

Molecular replacement
Crystal Structure of a Y35G Mutant of Bovine Pancreatic Trypsin Inhibitor, **220**, 757–770.
Ionic Interactions with Parvalbumins. Crystal Structure Determination of Pike 4·10 Parvalbumin in Four Different Ionic Environments, **220**, 1017–1039.
2·9 Å Resolution Structure of an Anti-dinitrophenyl-spin-label Monoclonal Antibody Fab Fragment with Bound Hapten, **221**, 239–256.
Crystal Structure of Uncleaved Ovalbumin at 1·95 Å Resolution, **221**, 941–959.
High Resolution Structure of an Oligomeric Eye Lens β-Crystallin. Loops, Arches, Linkers and Interfaces in βB2 Dimer Compared to a Monomeric γ-Crystallin, **222**, 1067–1083.

Molecular surface complimentarity
"Soft Docking": Matching of Molecular Surface Cubes, **219**, 79–102.

Mollusc globin
Crystallization and Preliminary Data for the Ferric Form of *Lucina pectinata* Hemoglobin I, **222**, 447–449.

Molten globule
Anion and pH-dependent Conformational Transition of an Amphiphilic Polypeptide, **218**, 387–396.
Stable Submolecular Folding Units in a Non-compact Form of Cytochrome *c*, **221**, 1045–1061.
Role of Electrostatic Repulsion in the Acidic Molten Globule of Cytochrome *c*, **222**, 679–686.
A Simplified Mechanical Model of Proteins Tested on the Globin Fold, **222**, 805–817.

Monoamine synthesis
Distinct Forms of the Protein Kinase-dependent Activator of Tyrosine and Trytophan Hydroxylases, **217**, 125–132.

Monoclonal antibody
Structural and Kinetic Studies of the Fab Fragment of a Monoclonal Anti-spin Label Antibody by Nuclear Magnetic Resonance, **221**, 257–270.

Monomeric globin
Crystallization and Preliminary Data for the Ferric Form of *Lucina pectinata* Hemoglobin I, **222**, 447–449.

Monte Carlo
Computer Simulation of DNA Supercoiling, **217**, 413–419.
Database Algorithm for Generating Protein Backbone and Side-chain Co-ordinates from a C^{α} Trace Application to Model Building and Detection of Co-ordinate Errors, **218**, 183–194.

Morphogenesis
Reiterated Gene Amplifications at Specific Short Homology Sequences in Phage T4 Produce Hp17 Mutants, **218**, 705–721.

5′ motif
Composite of A and F-type 5′ Terminal Sequences Defines a Subfamily of Mouse LINE-1 Elements, **221**, 367–373.

Mouse
Composite of A and F-type 5′ Terminal Sequences Defines a Subfamily of Mouse LINE-1 Elements, **221**, 367–373.

Mouse genetics
Systematic Identification of LINE-1 Repetitive DNA Sequence Differences Having Species Specificity Between *Mus spretus* and *Mus domesticus*, **219**, 635–643.

mRNA decay
Decay of mRNA Encoding Ribosomal Protein S15 of *Escherichia coli* Is Initiated by an RNase E-dependent Endonucleolytic Cleavage that Removes the 3′ Stabilizing Stem and Loop Structure, **217**, 283–292.

mRNA destabilization
Decay of mRNA Encoding Ribosomal Protein S15 of *Escherichia coli* Is Initiated by an RNase E-dependent Endonucleolytic Cleavage that Removes the 3′ Stabilizing Stem and Loop Structure, **217**, 283 292.

mRNA processing
Decay of mRNA Encoding Ribosomal Protein S15 of *Escherichia coli* Is Initiated by an RNase E-dependent Endonucleolytic Cleavage that Removes the 3′ Stabilizing Stem and Loop Structure, **217**, 283 292.

mRNA secondary structure
Bacterial Expression of Rat Liver Succinyl-CoA Synthetase α-Subunit, **219**, 165–174.

mRNA structure
Functional and Structural Elements of the mRNA of the *cIII* Gene of Bacteriophage Lambda, **218**, 723–733.

mRNA topography on the ribosome
Spatial Organization of Template Polynucleotides on the Ribosome Determined by Fluorescence Methods, **221**, 441–453.

ms^2i^6A deficiency
ms^2i^6A Deficiency Enhances Proofreading in Translation, **222**, 1161–1171.

MSK1
Structure and Evolution of a Group of Related Aminoacyl-tRNA Synthetases, **218**, 557–568.

mtRNA-splicing
MRS3 and MRS4, Two Suppressors of mtRNA Splicing Defects in Yeast, are New Members of the Mitochondrial Carrier Family, **217**, 23–37.

Multiple sequence alignment
Motif Recognition and Alignment for Many Sequences by Comparison of Dot-matrices, **218**, 33–43.

Multiple sequence matching
An Efficient Algorithm for Identifying Matches with Errors in Multiple Long Molecular Sequences, **221**, 1367 1378.

Multivariate sequence analysis
A New Family of Powerful Multivariate Statistical Sequence Analysis Techniques, **220**, 877–887.

Mus spretus
Systematic Identification of LINE-1 Repetitive DNA Sequence Differences Having Species Specificity Between *Mus spretus* and *Mus domesticus*, **219**, 635–643.

Muscle
Isolation and Characterization of a Previously Unrecognized Myosin Heavy Chain Gene Present in the Syrian Hamster, **218**, 657–665.
Direct Determination of Myosin Filament Symmetry in Scallop Striated Adductor Muscle by Rapid Freezing and Freeze Substitution, **220**, 125–132.
Functional and Ultrastructural Effects of a Missense Mutation in the Indirect Flight Muscle-specific Actin Gene of *Drosophila melanogaster*, **222**, 963–982.

Mutagenesis
Mutation Spectrum Following Transfection of Ultraviolet-irradiated Single-stranded or Double-stranded Shuttle Vector DNA into Monkey Cells, **218**, 667–673.
Isolation and *in Vitro* Characterization of Temperature-sensitive Mutants of the Bacteriophage f1 Gene V Protein, **219**, 257–275.
Mutational Specificity of DNA Precursor Pool Imbalances in Yeast Arising from Deoxycytidylate Deaminase Deficiency or Treatment with Thymidylate, **220**, 933–946.
Novel Mutational Spectrum Induced by *N*-methyl-*N'*-nitro-*N*-nitrosoguanidine in the Coding Region of the Hypoxanthine (Guanine) Phosphoribosyltransferase Gene in Diploid Human Fibroblasts, **221**, 421–430.
Stable Ester Conjugate between the *Saccharomyces cerevisiae* RAD6 Protein and Ubiquitin Has no Biological Activity, **221**, 745–749.
Cumulative Site-directed Charge–Change Replacements in Bacteriophage T4 Lysozyme Suggest that Long-range Electrostatic Interactions Contribute Little to Protein Stability, **221**, 873–887.
Molecular Basis for Methoxyamine Initiated Mutagenesis ^{1}H Nuclear Magnetic Resonance Studies of Base-modified Oligodeoxynucleotides, **222**, 711–723.

Mutant
Functional and Ultrastructural Effects of a Missense Mutation in the Indirect Flight Muscle-specific Actin Gene of *Drosophila melanogaster*, **222**, 963–982.

Mutant proteins
The Role of Internal Packing Interactions in Determining the Structure and Stability of a Protein, **219**, 359–376.

Mutant structures
Structural and Thermodynamic Analysis of the Packing of Two α-Helices in Bacteriophage T4 Lysozyme, **221**, 647–667.

Mutants
Refined Atomic Structures of N9 Subtype Influenza Virus Neuraminidase and Escape Mutants, **221**, 487–497.

Mutation
Single Charge Change on the Helical Surface of the Paramyosin Rod Dramatically Disrupts Thick Filament Assembly in *Caenorhabditis elegans*, **219**, 429–441.
Crystal Structure of a Y35G Mutant of Bovine Pancreatic Trypsin Inhibitor, **220**, 757–770.
Mutational Specificity of the *dnaE173* Mutator Associated with a Defect in the Catalytic Subunit of DNA Polymerase III of *Escherichia coli*, **222**, 925–936.

Mutational analysis
Mutational Analysis of the Structure and Function of the Adenine Phosphoribosyltransferase Enzyme of Chinese Hamster, **221**, 163–174.

Mutational specificity
Novel Mutational Spectrum Induced by *N*-methyl-*N'*-nitro-*N*-nitrosoguanidine in the Coding Region of the Hypoxanthine (Guanine) Phosphoribosyltransferase Gene in Diploid Human Fibroblasts, **221**, 421–430.

Mutator
Mutational Specificity of the *dnaE173* Mutator Associated with a Defect in the Catalytic Subunit of DNA Polymerase III of *Escherichia coli*, **222**, 925–936.

Mutator genes
Evidence for Horizontal Gene Transfer in *Escherichia coli* Speciation, **222**, 851–856.

Myelinogenesis
Order–Disorder Phenomena in Myelinated Nerve Sheaths. III. The Structure of Myelin in Rat Optic Nerves over the Course of Myelinogenesis, **220**, 351–357.

Myoglobin
Neutron Diffraction Study of Carbonmonoxymyoglobin, **220**, 381–399.

Myoglobin : imidazole complex
X-ray Crystal Structure of the Ferric Sperm Whale Myoglobin : Imidazole Complex at 2·0 Å Resolution, **217**, 409–412.

Myosin
A Folded (10 S) Conformer of Myosin from a Striated Muscle and its Implications for Regulation of ATPase Activity, **217**, 323–335.
Isolation and Characterization of a Previously Unrecognized Myosin Heavy Chain Gene Present in the Syrian Hamster, **218**, 657–665.
Chimaeric Myosin Regulatory Light Chains: Sub-domain Switching Experiments to Analyse the Function of the N-Terminal EF Hand, **218**, 825–835.

Myosin assembly
Scanning Transmission Electron Microscopic Mass Determination of *in Vitro* Self-assembled Smooth Muscle Myosin Filaments, **222**, 455–458.

Myosin filament
Direct Determination of Myosin Filament Symmetry in Scallop Striated Adductor Muscle by Rapid Freezing and Freeze Substitution, **220**, 125–132.
Scanning Transmission Electron Microscopic Mass Determination of *in Vitro* Self-assembled Smooth Muscle Myosin Filaments, **222**, 455–458.

Myosin heavy chain genes
Isolation and Characterization of a Previously Unrecognized Myosin Heavy Chain Gene Present in the Syrian Hamster, **218**, 657–665.

Myosin light chain kinase
Crystallization and Preliminary Analysis of Telokin, the C-Terminal Domain of Myosin Light Chain Kinase, **217**, 621–623.
Regulation of Smooth Muscle Myosin Light Chain Kinase. Allosteric Effects and Co-operative Activation by Calmodulin, **220**, 947–957.

Myosin subfragment-1
Identification of the Site Important for the Actin-activated MgATPase Activity of Myosin Subfragment-1, **217**, 229–233.

Myxococcus
Crystallization and Preliminary X-ray Diffraction Analysis of Nucleoside Diphosphate Kinase from *Myxococcus xanthus*, **220**, 5–7.

N.m.r.
Efficient Computation of Three-dimensional Protein Structures in Solution from Nuclear Magnetic Resonance Data Using the Program DIANA and the Supporting Programs CALIBA, HABAS and GLOMSA, **217**, 517–530.

Structure Determination of the *Antp(C39 → S)* Homeodomain from Nuclear Magnetic Resonance Data in Solution using a Novel Strategy for the Structure Calculation with the Programs DIANA, CALIBA, HABAS and GLOMSA, **217**, 531–540.

Accurate Measurements of Coupling Constants from Two-dimensional Nuclear Magnetic Resonance Spectra of Proteins and Determination of ϕ-Angles, **217**, 731–736.

A Nuclear Magnetic Resonance Study of the Hydrogen-Exchange Behaviour of Lysozyme in Crystals and Solution, **218**, 413–426.

Three-dimensional Structure of a Complement Control Protein Module in Solution, **219**, 717–725.

Molecular Basis for Co-operativity in Ca^{2+} Binding to Calbindin D_{9k}. ^1H Nuclear Magnetic Resonance Studies of $(Cd^{2+})_1$-Bovine Calbindin D_{9k} **220**, 173–189.

Are Time-averaged Restraints Necessary for Nuclear Magnetic Resonance Refinement? A Model Study for DNA, **220**, 457–479.

Conformation and Mobility of the RNA-binding N-Terminal Part of the Intact Coat Protein of Cowpea Chlorotic Mottle Virus. A Two-dimensional Proton Nuclear Magnetic Resonance Study, **220**, 701–709.

Comparison of the Solution Nuclear Magnetic Resonance and X-ray Crystal Structures of Human Recombinant Interleukin-1β, **221**, 47–53.

Structural and Kinetic Studies of the Fab Fragment of a Monoclonal Anti-spin Label Antibody by Nuclear Magnetic Resonance, **221**, 257–270.

High-resolution Solution Structure of Reduced French Bean Plastocyanin and Comparison with the Crystal Structure of Poplar Plastocyanin, **221**, 533–555.

Sequence-specific ^1H n.m.r. Assignments and Determination of the Three-dimensional Structure of Reduced *Escherichia coli* Glutaredoxin, **221**, 1311–1324.

Nuclear Magnetic Resonance Structural Studies of Intramolecular Purine·Purine·Pyrimidine DNA Triplexes in Solution. Base Triple Pairing Alignments and Strand Direction, **221**, 1403–1418.

Relationship between Nuclear Magnetic Resonance Chemical Shift and Protein Secondary Structure, **222**, 311–333.

(14–38, 30–51) Double-disulphide Intermediate in Folding of Bovine Pancreatic Trypsin Inhibitor: A Two-dimensional ^1H Nuclear Magnetic Resonance, **222**, 353–371.

Two-dimensional ^1H Nuclear Magnetic Resonance Study of the (5–55) Single-disulphide Folding Intermediate of Bovine Pancreatic Trypsin Inhibitor, **222**, 373–390.

Interaction of Troponin I and Troponin C. Use of the Two-dimensional Nuclear Magnetic Resonance Transferred Nuclear Overhauser Effect to Determine the Structure of the Inhibitory Troponin I Peptide when Bound to Skeletal Troponin C, **222**, 405–421.

Refinement of the Three-dimensional Solution Structure of Barley Serine Proteinase Inhibitor 2 and Comparison with the Structures in Crystals, **222**, 621–635.

Molecular Basis for Methoxyamine Initiated Mutagenesis ^1H Nuclear Magnetic Resonance Studies of Base-modified Oligodeoxynucleotides, **222**, 711–723.

Multinuclear Nuclear Magnetic Resonance Studies of Na Cation-stabilized Complex Formed by d(G-G-T-T-T-T-C-G-G) in Solution. Implications for G-tetrad Structures, **222**, 819–832.

^{15}N n.m.r.

Experimental Determination of Torsion Angles in the Polypeptide Backbone of the Gramicidin A Channel by Solid State Nuclear Magnetic Resonance, **218**, 607–619.

Solid-state Nuclear Magnetic Resonance Derived Model for Dynamics in the Polypeptide Backbone of the Gramicidin A Channel, **218**, 621–637.

^1H n.m.r.

Proton Nuclear Magnetic Resonance Study of the Solution Distal Histidine Orientation in Monomeric *Chironomus thummi thummi* Cyanomet Hemoglobins. Dynamic Stability of the Heme Pocket as Monitored by Labile Proton Exchange, **221**, 1015–1026.

2D n.m.r.

Nuclear Magnetic Resonance Studies of the Hammerhead Ribozyme Domain. Secondary Structure Formation and Magnesium Ion Dependence, **217**, 113–124.

Proton Nuclear Magnetic Resonance Study of the B9(Asp) Mutant of Human Insulin. Sequential Assignment and Secondary Structure, **218**, 221–231.

3D n.m.r.

Determination of the Positions of Bound Water Molecules in the Solution Structure of Reduced Human Thioredoxin by Heteronuclear Three-dimensional Nuclear Magnetic Resonance Spectroscopy, **220**, 209–216.

2D n.m.r. of DNA

Solution Structure of $[d(GTATATAC)]_2$ *via* Restrained Molecular Dynamics Simulations with Nuclear Magnetic Resonance Constraints Derived from Relaxation Matrix Analysis of Two-dimensional Nuclear Overhauser Effect Experiments, **221**, 271–292.

N.m.r. structures

Relaxation Matrix Refinement of the Solution Structure of Squash Trypsin Inhibitor, **219**, 499–510.

N2 refined structure

Three-dimensional Structure of the Neuraminidase of Influenza Virus A/Tokyo/3/67 at 2·2 Å Resolution, **221**, 473–486.

N-acetylglucosamine

CAP and Nag Repressor Binding to the Regulatory Regions of the *nagE-B* and *manX* Genes of *Escherichia coli*, **217**, 661–679.

NADH dehydrogenase

Electron Microscopic Analysis of the Peripheral and Membrane Parts of Mitochondrial NADH Dehydrogenase (Complex I), **221**, 1027–1043.

NADH peroxidase

Cloning, Sequence and Overexpression of NADH Peroxidase from *Streptococcus faecalis* 10C1. Structural Relationship with the Flavoprotein Disulfide Reductases, **221**, 857–871.

Structure of NADH Peroxidase from *Streptococcus faecalis* 10C1 Refined at 2·16 Å Resolution, **221**, 1325–1344.

NADH: Ubiquinone reductase

Electron Microscopic Analysis of the Peripheral and Membrane Parts of Mitochondrial NADH Dehydrogenase (Complex I), **221**, 1027–1043.

NADPH

Crystallization and Crystal Packing of *Proteus mirabilis* PR Catalase, **221**, 1075–1077.

Negative NOE contacts

^1H and ^{31}P Nuclear Magnetic Resonance Studies of Spermine Binding to the Z-DNA form of $d(m^5CGm^5CGm^5CG)_2$. Evidence for Decreased Spermine Mobility, **219**, 585–590.

Negative regulator

Crystallization of and Preliminary X-ray Data for the Negative Regulator (AmiC) of the Amidase Operon of *Pseudomonas aeruginosa*, **222**, 869–871.

Nerve Growth Factor

Crystallization and Characterization of the High Molecular Weight Form of Nerve Growth Factor (7 S NGF), **219**, 595–601.

Neural network

Prediction of Human mRNA Donor and Acceptor Sites from the DNA Sequence, **220**, 49–65.

Neural networks

Generalized Protein Tertiary Structure Recognition using Associative Memory Hamiltonians, **222**, 1013–1034.

Neuraminidase
Three-dimensional Structure of the Neuraminidase of Influenza Virus A/Tokyo/3/67 at 2·2 Å Resolution, **221**, 473–486.
Refined Atomic Structures of N9 Subtype Influenza Virus Neuraminidase and Escape Mutants, **221**, 487–497.

Neurophysin
Crystallographic Analysis of the Neurophysin–Oxytocin Complex. A Preliminary Report, **221**, 43–45.
Crystals of a Bovine Neurophysin II Tripeptide Complex, **222**, 23–25.

Neurophysin–hormone complex
Crystallographic Analysis of the Neurophysin–Oxytocin Complex. A Preliminary Report, **221**, 43–45.

Neurospora crassa
An Apparent Rare-codon Effect on the Rate of Translation of a *Neurospora* Gene, **221**, 733–736.

Neutron diffraction
Neutron Diffraction Studies of the Structure of Filamentous Bacteriophage Pf1. Demonstration that the Coat Protein Consists of a Pair of α-Helices with an Intervening, Non-helical Surface Loop, **220**, 359–379.
Neutron Diffraction Study of Carbonmonoxymyoglobin, **220**, 381–399.

Neutron scattering
Spatial Arrangement of σ-Factor and Core Enzyme of *Escherichia coli* RNA Polymerase. A Neutron Solution Scattering Study, **219**, 747–755.
Structural Parameters of the Pf1 Gene 5 Protein–DNA Complex in Solution by Neutron Scattering, **221**, 755–759.

NEWHEL90 parameters
Structure of *B*-DNA Decamer C-C-A-A-C-G-T-T-G-G and Comparison with Isomorphous Decamers C-C-A-A-G-A-T-T-G-G and C-C-A-G-G-C-C-T-G-G, **217**, 177–199.

Newt
Characterization of a Tandemly Repeated DNA Sequence Family Originally Derived by Retroposition of $tRNA^{Glu}$ in the Newt, **222**, 391–404.

Nicksite
Molecular Recognition. Conformational Analysis of Limited Proteolytic Sites and Serine Proteinase Protein Inhibitors, **220**, 507–530.

NifA
Organization and Function of Binding Sites for the Transcriptional Activator NifA in the *Klebsiella pneumoniae nifE* and *nifU* Promoters, **220**, 915–931.

Nitrile hydratase
Crystallization of a Photosensitive Nitrile Hydratase from *Rhodococcus* sp. N-771, **220**, 221–222.

Nitroxide spin label
Structural and Kinetic Studies of the Fab Fragment of a Monoclonal Anti-spin Label Antibody by Nuclear Magnetic Resonance, **221**, 257–270.

***nod* gene expression**
Identification of NolR, a Negative Transacting Factor Controlling the *nod* Regulon in *Rhizobium meliloti*, **222**, 885–896.

***nod* regulon**
Identification of NolR, a Negative Transacting Factor Controlling the *nod* Regulon in *Rhizobium meliloti*, **222**, 885–896.

***nod* repressor**
Identification of NolR, a Negative Transacting Factor Controlling the *nod* Regulon in *Rhizobium meliloti*, **222**, 885–896.

NOE relaxation matrix refinement
Relaxation Matrix Refinement of the Solution Structure of Squash Trypsin Inhibitor, **219**, 499–510.

NOE restraints
Are Time-averaged Restraints Necessary for Nuclear Magnetic Resonance Refinement? A Model Study for DNA, **220**, 457–479.
Solution Structure of $[d(GTATATAC)]_2$ *via* Restrained Molecular Dynamics Simulations with Nuclear Magnetic Resonance Constraints Derived from Relaxation Matrix Analysis of Two-dimensional Nuclear Overhauser Effect Experiments, **221**, 271–292.

NolR
Identification of NolR, a Negative Transacting Factor Controlling the *nod* Regulon in *Rhizobium meliloti*, **222**, 885–896.

Non-heme iron
Structures of Deoxy and Oxy Hemerythrin at 2·0 Å Resolution, **218**, 583–593.
Structures of Met and Azidomet Hemerythrin at 1·66 Å Resolution, **220**, 723–737.

Non-polar side-chains
Straight-chain Non-polar Amino Acids Are Good Helix-formers in Water, **219**, 135–137.

Normal-mode analysis
Intramolecular Dielectric Screening in Proteins, **218**, 859–886.

Nuclear Overhauser effect
Proton Nuclear Magnetic Resonance Study of the Solution Distal Histidine Orientation in Monomeric *Chironomus thummi thummi* Cyanomet Hemoglobins. Dynamic Stability of the Heme Pocket as Monitored by Labile Proton Exchange, **221**, 1015–1026.

Nuclear targeting
Identification and Functional Analysis of the Nuclear Localization Signals of Ribosomal Protein L25 from *Saccharomyces cerevisiae*, **221**, 225–237.

Nucleation
Lithium Increases Actin Polymerization Rates by Enhancing the Nucleation Step, **217**, 401–404.

Nucleic acid binding
Systematic Evolution of Ligands by Exponential Enrichment with Integrated Optimization by Non-linear Analysis, **222**, 739–761.

Nucleic acids folding
Evidence for Horizontal Gene Transfer in *Escherichia coli* Speciation, **222**, 851–856.

Nucleocapsid
Generation of Infectious Nucleocapsids by *in Vitro* Assembly of the Shell Protein on to the Polymerase Complex of the dsRNA Bacteriophage φ6, **218**, 569–581.

Nucleoprotein complex
Structural Parameters of the Pf1 Gene 5 Protein–DNA Complex in Solution by Neutron Scattering, **221**, 755–759.

Nucleoside
Crystallization and Preliminary X-ray Diffraction Analysis of Nucleoside Diphosphate Kinase from *Myxococcus xanthus*, **220**, 5–7.

Nucleoside diphosphate kinase
Crystallization and Preliminary X-ray Diffraction Studies of Nucleoside Diphosphate Kinase from *Dictyostelium discoideum*, **217**, 239–240.

Nucleosome
Can One Measure the Free Energy of Binding of the Histone Octamer to Different DNA Sequences by Salt-dependent Reconstitution?, **219**, 391–392.
Poly[d(A·T)] and Other Synthetic Polydeoxynucleotides Containing Oligoadenosine Tracts form Nucleosomes Easily, **222**, 1149–1160.

Nucleosome positioning
Chromatosome Positioning on Assembled Long Chromatin. Linker Histones Affect Nucleosome Placement on 5 S rDNA, **220**, 89–100.
Mobility of Positioned Nucleosomes on 5 S rDNA, **220**, 101–110.

Nucleosome structure
Topoisomer Heterogeneity of Plasmid Chromatin in Living Cells, **222**, 133–137.

Nucleosomes
Chromatin Assembly on Plasmid DNA *in Vitro*. Apparent Spreading of Nucleosome Alignment from one Region of pBR327 by Histone H5, **222**, 1131–1147.

Nucleotide analog
RNA–Protein Interactions in a Nus A-containing *Escherichia coli* Transcription Complex Paused at an RNA Hairpin, **219**, 11–25.
Sigma Subunit of *Escherichia coli* RNA Polymersase Loses Contacts with the 3′ End of the Nascent RNA after Synthesis of a Tetranucleotide, **220**, 227–239.

Nucleotide sequence
Efficient Templates for Qβ Replicase are Formed by Recombination from Heterologous Sequences, **221**, 463–472.

Nucleus
Identification and Functional Analysis of the Nuclear Localization Signals of Ribosomal Protein L25 from *Saccharomyces cerevisiae*, **221**, 225–237.

Nun termination
Escherichia coli Mutations That Block Transcription Termination by Phage HK022 Nun Protein, **220**, 613–619.

Nus factors
Escherichia coli Mutations That Block Transcription Termination by Phage HK022 Nun Protein, **220**, 613–619.

NusA protein
Escherichia coli σ^{70} and NusA Proteins. I. Binding Interactions with Core RNA Polymerase in Solution and Within the Transcription Complex, **220**, 307–324.
Escherichia coli σ^{70} and NusA Proteins. II. Physical Properties and Self-association States, **220**, 325–333.

OAX family
Characterization of a Tandemly Repeated DNA Sequence Family Originally Derived by Retroposition of $tRNA^{Glu}$ in the Newt, **222**, 391–404.

Octopus
Assembly of *Octopus dofleini* Hemocyanin. A Study of the Kinetics by Sedimentation, Light Scattering and Electron Microscopy, **217**, 307–321.

ODMR spectroscopy
Physical Studies of Tyrosine and Tryptophan Residues in Mammalian A1 Heterogeneous Nuclear Ribonucleoprotein. Support for a Segmented Structure, **221**, 693–709.

Oligodeoxynucleotides
Molecular Basis for Methoxyamine Initiated Mutagenesis ^{1}H Nuclear Magnetic Resonance Studies of Base-modified Oligodeoxynucleotides, **222**, 711–723.

Oligomer
Molecular Size and Symmetry of *Pseudomonas aeruginosa* Catabolic Ornithine Carbamoyltransferase. An X-ray Crystallography Analysis, **220**, 9–12.

Oligonucleotide-directed mutagenesis
Amino Acid Substrate Specificity of *Escherichia coli* Phenylalanyl-tRNA Synthetase Altered by Distinct Mutations, **222**, 99–124.

OmpA
Single Mutations in a Gene for a Tail Fiber Component of an *Escherichia coli* Phage can Cause an Extension from a Protein to a Carbohydrate as a Receptor, **219**, 655–663.

OmpF porin
Trigonal Crystals of Porin from *Escherichia coli*, **218**, 505–507.

Oncogenic mutant of *ras*
Crystal Structures at 2·2 Å Resolution of the Catalytic Domains of Normal *ras* Protein and an Oncogenic Mutant Complexed with GDP, **217**, 503–516.

Oocytes
Developmental Regulation of Covalent Modification of Double-stranded RNA during Silkmoth Oogenesis, **218**, 517–527.

Open complex
Catabolite Activator Protein-induced DNA Bending in Transcription Initiation, **219**, 201–215.

Operator
Identification of DNA Sequences Involved in Regulating *Bacillus subtilis glnRA* Expression by the Nitrogen Source, **220**, 241–253.

Operator recognition
Shared Operator Recognition Specificity between Trp Repressor and the Repressors of Bacteriophage 434, **217**, 599–602.

Operon
In Vivo Interaction of *Escherichia coli lac* Repressor N-Terminal Fragments with the *lac* Operator, **219**, 623–634.

Optic nerve myelin
Order–Disorder Phenomena in Myelinated Nerve Sheaths. III. The Structure of Myelin in Rat Optic Nerves over the Course of Myelinogenesis, **220**, 351–357.

Optimized SELEX
Systematic Evolution of Ligands by Exponential Enrichment with Integrated Optimization by Non-linear Analysis, **222**, 739–761.

Organophosphates
Refined Crystal Structures of "Aged" and "Non-aged" Organophosphoryl Conjugates of γ-Chymotrypsin, **221**, 909–918.

Oriented sol
Preparing Well-oriented Sols of Straight Bacterial Flagellar Filaments for X-ray Fiber Diffraction, **217**, 293–302.

Origin of replication
Sequence Requirements for Protein-primed DNA Replication of Bacteriophage PRD1, **218**, 779–789.
Initiation of Bacteriophage PRD1 DNA Replication on Single-stranded Templates, **222**, 127–131.

Ornithine
Molecular Size and Symmetry of *Pseudomonas aeruginosa* Catabolic Ornithine Carbamoyltransferase. An X-ray Crystallography Analysis, **220**, 9–12.

Osmium tetroxide
Structural Alteration in Alternating Adenine-Thymine Sequences in Positively Supercoiled DNA, **219**, 145–149.

Osmoregulation
Characterization of the Cytoplasm of *Escherichia coli* K-12 as a Function of External Osmolarity. Implications for Protein–DNA Interactions *in Vivo*, **222**, 281–300.
EnvZ Controls the Concentration of Phosphorylated OmpR to Mediate Osmoregulation of the Porin Genes, **222**, 567–580.

Osmotic effects
Characterization of the Cytoplasm of *Escherichia coli* K-12 as a Function of External Osmolarity. Implications for Protein–DNA Interactions *in Vivo*, **222**, 281–300.

Osmotic regulation
Osmotic Induction of Gene *osmC* Expression in *Escherichia coli* K12, **220**, 959–973.

Outer membrane protein
Carboxy-terminal Phenylalanine is Essential for the Correct Assembly of a Bacterial Outer Membrane Protein, **218**, 141–148.

Ovalbumin
Serpin Tertiary Structure Transformation, **221**, 615–621.
Crystal Structure of Uncleaved Ovalbumin at 1·95 Å Resolution, **221**, 941–959.

Ovomucoid
Refined X-ray Crystal Structures of the Reactive Site Modified Ovomucoid Inhibitor Third Domains from Silver Pheasant (OMSVP3*) and from Japanese Quail (OMJPQ3*), **220**, 739–755.

Ovomucoids
Effect of Single Amino Acid Replacements on the Thermodynamics of the Reactive Site Peptide Bond Hydrolysis in Ovomucoid Third Domain, **220**, 1041–1053.

Oxidation-reduction proteins
Comparison of the Crystal Structures of a Flavodoxin in its Three Oxidation States at Cryogenic Temperatures, **218**, 195–208.

Oxido–reduction
Crystallization and Preliminary X-ray Diffraction Studies of the Spinach-chloroplast Thioredoxin f, **222**, 459–461.

Oxocarbonium ion intermediate
Lysozyme Revisited: Crystallographic Evidence for Distortion of an *N*-Acetylmuramic Acid Residue Bound in Site D, **220**, 401–424.

Oxygen binding
Assembly of *Octopus dofleini* Hemocyanin. A Study of the Kinetics by Sedimentation, Light Scattering and Electron Microscopy, **217**, 307–321.

Oxytocin
Crystallographic Analysis of the Neurophysin–Oxytocin Complex. A Preliminary Report, **221**, 43–45.

P. aeruginosa
Crystallization of and Preliminary X-ray Data for the Negative Regulator (AmiC) of the Amidase Operon of *Pseudomonas aeruginosa*, **222**, 869–871.

Packing
Prediction of Protein Side-chain Conformation by Packing Optimization, **217**, 373–388.

Packing and covering
The Observed Form of Coated Vesicles and a Mathematical Covering Problem, **218**, 485–488.

Paramecium
Cysteine Residue Periodicity is a Conserved Structural Feature of Variable Surface Proteins from *Paramecium tetraurelia*, **222**, 835–841.

Paramyosin
Single Charge Change on the Helical Surface of the Paramyosin Rod Dramatically Disrupts Thick Filament Assembly in *Caenorhabditis elegans*, **219**, 429–441.
Identification and Characterization of *Drosophila melanogaster* Paramyosin, **220**, 687–700.

parasitic diseases
Activity and Specificity of Human Aldolases, **219**, 573–576.

Parvalbumin
Ionic Interactions with Parvalbumins. Crystal Structure Determination of Pike 4·10 Parvalbumin in Four Different Ionic Environments, **220**, 1017–1039.

Pathway
Mapping Transition States of Protein Unfolding by Protein Engineering of Ligand-binding Sites, **221**, 1007–1014.

Pattern recognition
Motif Recognition and Alignment for Many Sequences by Comparison of Dot-matrices, **218**, 33–43.
Amino Acid Substitution Matrices from an Information Theoretic Perspective, **219**, 555–565.
Identifying Potential tRNA Genes in Genomic DNA Sequences, **220**, 659–671.

Patterns
Influence of Proline Residues on Protein Conformation, **218**, 397–412.

pBR322
Unidirectional Replication as Visualized by Two-dimensional Agarose Gel Electrophoresis, **220**, 843–853.

PC-refinement
2·9 Å Resolution Structure of an Anti-dinitrophenyl-spin-label Monoclonal Antibody Fab Fragment with Bound Hapten, **221**, 239–256.

Peanut agglutinin
Crystallization and Preliminary X-ray Analysis of Peanut Agglutinin–N^6-benzylaminopurine Complex, **219**, 151–153.

Penicillin
β-Lactamase of *Bacillus licheniformis* 749/C. Refinement at 2 Å Resolution and Analysis of Hydration, **220**, 435–455.

Penicillinase
Refined Crystal Structure of β-Lactamase from *Staphylococcus aureus* PC1 at 2·0 Å Resolution, **217**, 701–719.
β-Lactamase of *Bacillus licheniformis* 749/C. Refinement at 2 Å Resolution and Analysis of Hydration, **220**, 435–455.

Peptide
Molecular and Functional Characterization of a Carbon Starvation Gene of *Escherichia coli*, **218**, 129–140.
Refined Structure of the Human Histocompatibility Antigen HLA-A2 at 2·6 Å Resolution, **219**, 277–319.

Peptide antigens
Multiple Display of Foreign Peptides on a Filamentous Bacteriophage. Peptides from *Plasmodium falciparum* Circumsporozoite Protein as Antigens, **220**, 821–827.

Peptide bond hydrolysis equilibria
Effect of Single Amino Acid Replacements on the Thermodynamics of the Reactive Site Peptide Bond Hydrolysis in Ovomucoid Third Domain, **220**, 1041–1053.

Peptide conformation
Prediction of Protein Backbone Conformation Based on Seven Structure Assignments. Influence of Local Interactions, **221**, 961–979.

Peptide flip
Crystal Structure Analysis of Oxidized *Pseudomonas aeruginosa* Azurin at pH 5·5 and pH 9·0. A pH-induced Conformational Transition Involves a Peptide Bond Flip, **221**, 765–772.

Peptide inhibitor
Crystallization Studies of cAMP-dependent Protein Kinase. Cocrystals of the Catalytic Subunit with a 20 Amino Acid Residue Peptide Inhibitor and MgATP Diffract to 3·0 Å Resolution, **220**, 217–220.

Peptide library
Selection of Antibody Ligands from a Large Library of Oligopeptides Expressed on a Multivalent Exposition Vector, **222**, 301–310.

Peptidyl transferase region
Structural Analysis of the Peptidyl Transferase Region in Ribosomal RNA of the Eukaryote *Xenopus laevis*, **217**, 93–112.

Periplasm
Expression of the Protease Inhibitor Ecotin and its Co-crystallization with Trypsin, **222**, 139–142.

Pf1
DNA Sequence of the Filamentous Bacteriophage Pf1, **218**, 349–364.

Pf1 bacteriophage
Circular Dichroism and Fluorescence Analysis of the Interaction of Pf1 Gene *5* Protein with Poly(dT), **217**, 681–689.
Structural Parameters of the Pf1 Gene *5* Protein–DNA Complex in Solution by Neutron Scattering, **221**, 755–759.

Phage
Single Mutations in a Gene for a Tail Fiber Component of an *Escherichia coli* Phage can Cause an Extension from a Protein to a Carbohydrate as a Receptor, **219**, 655–663.

Phage HK022
Escherichia coli Mutations That Block Transcription Termination by Phage HK022 Nun Protein, **220**, 613–619.

Phage lambda
Specificity of Antitermination Mechanisms. Suppression of the Terminator Cluster T1-T2 of *Escherichia coli* Ribosomal RNA operon, *rrnB*, by Phage λ Antiterminators, **222**, 59–66.

Phage Mu
Two Mutations of Phage Mu Transposase that Affect Strand Transfer or Interactions with B Protein Lie in Distinct Polypeptide Domains, **219**, 189–199.

Phage λ
Functional and Structural Elements of the mRNA of the *cIII* Gene of Bacteriophage Lambda, **218**, 723–733.
Structure of the Bacteriophage λ Cohesive End Site. Genetic Analysis of the Site (*cosN*) at which Nicks are Introduced by Terminase, **220**, 281–292.
The Last Duplex Base-pair of the Phage λ Chromosome. Involvement in Packaging, Ejection and Routing of λ DNA, **220**, 293–306.

Phage shock protein
Characterization and Sequence of the *Escherichia coli* Stress-induced *psp* Operon, **220**, 35–48.

Phage SP01
DNA-bending Properties of TF1, **221**, 777–794.

Phage φ29
Transcription Activation at a Distance by Phage φ29 Protein p4. Effect of Bent and Non-bent Intervening DNA Sequences, **219**, 403–414.

Phase transitions
Accelerated DNA Renaturation: Complementary Recognition in Condensed DNA, **222**, 1085–1108.

Phenylalanine
π–π Interactions: the Geometry and Energetics of Phenylalanine–Phenylalanine Interactions in Proteins, **218**, 837–846.

Phenylalanine hydroxylase
Crystallization and Preliminary X-ray Analysis of Phenylalanine Hydroxylase from Rat Liver, **218**, 495–498.

Phenylalanyl-tRNA synthetase
Amino Acid Substrate Specificity of *Escherichia coli* Phenylalanyl-tRNA Synthetase Altered by Distinct Mutations, **222**, 99–124.

***pheS* gene mutations**
Amino Acid Substrate Specificity of *Escherichia coli* Phenylalanyl-tRNA Synthetase Altered by Distinct Mutations, **222**, 99–124.

PhoE protein
Carboxy-terminal Phenylalanine is Essential for the Correct Assembly of a Bacterial Outer Membrane Protein, **218**, 141–148.

Phosphoribosyltransferase
Mutational Analysis of the Structure and Function of the Adenine Phosphoribosyltransferase Enzyme of Chinese Hamster, **221**, 163–174.

Phosphorylation
Structural Mechanism for Glycogen Phosphorylase Control by Phosphorylation and AMP, **218**, 233–260.
Identification and Characterization of *Drosophila melanogaster* Paramyosin, **220**, 687–700.
EnvZ Controls the Concentration of Phosphorylated OmpR to Mediate Osmoregulation of the Porin Genes, **222**, 567–580.

Phosphotransferase
Crystallization and Preliminary X-ray Diffraction Analysis of Nucleoside Diphosphate Kinase from *Myxococcus xanthus*, **220**, 5–7.

Phosphotransferase system
Crystallization of the IIA Domain of the Glucose Permease of *Bacillus subtilis*, **221**, 1079–1080.

Photoaffinity labeling
RNA–Protein Interactions in a Nus A-containing *Escherichia coli* Transcription Complex Paused at an RNA Hairpin, **219**, 11–25.

Photocrosslinking
Sigma Subunit of *Escherichia coli* RNA Polymersase Loses Contacts with the 3′ End of the Nascent RNA after Synthesis of a Tetranucleotide, **220**, 227–239.

Photosensitive
Crystallization of a Photosensitive Nitrile Hydratase from *Rhodococcus* sp. N-771, **220**, 221–222.

Photosynthesis
Isolation, Crystallization, Crystal Structure Analysis and Refinement of Constitutive C-phycocyanin from the Chromatically Adapting Cyanobacterium *Fremyella diplosiphon* at 1·66 Å Resolution, **217**, 577–592.

Photosynthetic cell
Crystallization and Preliminary X-ray Diffraction Studies of the Spinach-chloroplast Thioredoxin f, **222**, 459–461.

Phycocyanin
Isolation, Crystallization, Crystal Structure Analysis and Refinement of Constitutive C-phycocyanin from the Chromatically Adapting Cyanobacterium *Fremyella diplosiphon* at 1·66 Å Resolution, **217**, 577–592.

Physical map
Complete Physical Map of the *Bacillus subtilis* 168 Chromosome Constructed by a Gene-directed Mutagenesis Method, **220**, 631–648.

Physical mapping
Mapping Using Unique Sequences, **217**, 259–264.

Phytohormone
Crystallization and Preliminary X-ray Analysis of Peanut Agglutinin–N^6-benzylaminopurine Complex, **219**, 151–153.

Plasma protein
Structures and Organization of Major Plasma Protein Genes of the Silkworm *Bombyx mori*, **218**, 7–12.

Plasmid pT181
The *Staphylococcus aureus* Mutation *pcrA3* Leads to the Accumulation of pT181 Replication Initiation Com plexes, **221**, 1183–1189.

Plasmid replication
The *Staphylococcus aureus* Mutation *pcrA3* Leads to the Accumulation of pT181 Replication Initiation Com plexes, **221**, 1183–1189.

Plasmodium falciparum
Multiple Display of Foreign Peptides on a Filamentous Bacteriophage. Peptides from *Plasmodium falciparum* Circumsporozoite Protein as Antigens, **220**, 821–827.

Plastocyanin
High-resolution Solution Structure of Reduced French Bean Plastocyanin and Comparison with the Crystal Structure of Poplar Plastocyanin, **221**, 533–555.

Point mutations
Suggestions for "Safe" Residue Substitutions in Site-directed Mutagenesis, **217**, 721–729.
Activity and Specificity of Human Aldolases, **219**, 573–576.

Polarity
The Effects on Strand Exchange of 5′ *Versus* 3′ Ends of Single-stranded DNA in RecA Nucleoprotein Fila ments, **219**, 645–654.

Poly[d(A·T)]
Poly[d(A·T)] and Other Synthetic Polydeoxynucleotides Containing Oligoadenosine Tracts form Nucleosomes Easily, **222**, 1149–1160.

Polyelectrolyts effects
Characterization of the Cytoplasm of *Escherichia coli* K-12 as a Function of External Osmolarity. Implications for Protein–DNA Interactions *in Vivo*, **222**, 281–300.

Polyglutamic acid
Extended C-Terminal Tail of Wheat Histone H2A Interacts with DNA of the "Linker" Region, **218**, 805–813.

Polymer
Supramolecular Organization of Double-stranded DNA Molecules in the Columnar Hexagonal Liquid Crystalline Phase. An Electron Microscopic Analysis Using Freeze-fracture Methods, **218**, 165–181.

Polymerase chain reaction
Sequence Changes in Both Flanking Sequences of a Pre-tRNA Influence the Cleavage Specificity of RNase P, **217**, 637–648.
Novel Mutational Spectrum Induced by *N*-methyl-*N'*-nitro-*N*-nitrosoguanidine in the Coding Region of the Hypoxanthine (Guanine) Phosphoribosyltransferase Gene in Diploid Human Fibroblasts, **221**, 421–430.
Cloning, Sequence and Overexpression of NADH Peroxidase from *Streptococcus faecalis* 10C1. Structural Relationship with the Flavoprotein Disulfide Reductases, **221**, 857–871.

Polymerase dimers
RNA Polymerase Bound to the P_R Promoter of Bacteriophage λ Inhibits Open Complex Formation at the Divergently Transcribed P_{RM} Promoter. Implications for an Indirect Mechanism of Transcriptional Activation by λ Repressor, **222**, 479–494.

Polymerase pausing
An *in Vitro* Approach to Identifying Specificity Determinants of Mutagenesis Mediated by DNA Misalignments, **221**, 805–821.

Polymers
Angular Disorder in Actin: Is It Consistent with General Principles of Protein Structure?, **217**, 405–408.

Polymorphism
Role of the Disordered Terminal Regions of Flagellin in Filament Formation and Stability, **221**, 1461–1474.

Polynucleotide phosphorylase
mRNA Degradation by Processive 3′–5′ Exoribonucleases *in Vitro* and the Implications for Prokaryotic mRNA Decay *in Vivo*, **221**, 81–95.

Polyomavirus
Analysis of Polyomavirus Enhancer-Effect on DNA Replication and Early Gene Expression, **218**, 479–483.

Polypeptide conformation
Structure of Cyclodextrin Glycosyltransferase Refined at 2·0 Å Resolution, **217**, 737–750.

Porin
Crystals of an Integral Membrane Protein Diffracting to 1·8 Å Resolution, **217**, 9–10.
Crystallization and Preliminary X-ray Analysis of Phosphoporin from the Outer Membrane of *Escherichia coli*, **222**, 881–884.

Position 5 effect
Position Effect on Apparent Helical Propensities in the C-peptide Helix, **221**, 1395–1401.

Positive control
Transcription Activation at a Distance by Phage ϕ29 Protein p4. Effect of Bent and Non-bent Intervening DNA Sequences, **219**, 403–414.

Positive DNA supercoiling
Structural Alteration in Alternating Adenine-Thymine Sequences in Positively Supercoiled DNA, **219**, 145–149.

Positive ϕ-angles
Accurate Measurements of Coupling Constants from Two-dimensional Nuclear Magnetic Resonance Spectra of Proteins and Determination of ϕ-Angles, **217**, 731–736.

P_R and P_{RM} promoters
RNA Polymerase Bound to the P_R Promoter of Bacteriophage λ Inhibits Open Complex Formation at the Divergently Transcribed P_{RM} Promoter. Implications for an Indirect Mechanism of Transcriptional Activation by λ Repressor, **222**, 479–494.

Precession
Expression of the Protease Inhibitor Ecotin and its Co-crystallization with Trypsin, **222**, 139–142.

Prediction
A New Method for Building Protein Conformations from Sequence Alignments with Homologues of Known Structure, **217**, 1–7.

Preliminary X-ray analysis
Crystallization of and Preliminary X-ray Data for the Mouse Major Urinary Protein and Rat α-2u Globulin, **218**, 699–701.

Preliminary X-ray data
Preparation of Human Manganese Superoxide Dismutase by Tri-phase Partitioning and Preliminary Crystallographic Data, **219**, 103–108.
Preparation and X-ray Characterization of Four New Crystal Forms of Jacalin, a Lectin from *Artocarpus integrifolia*, **221**, 773–776.

Preliminary X-ray studies
New Crystal Form of Cytosolic Chicken Asparate Aminotransferase Suitable for High-resolution X-ray Analysis, **221**, 61–63.

Preliminary X-ray study
Crystallization and Preliminary X-ray Study of Blood Coagulation Factor IX/Factor X-binding Protein with Anticoagulant Activity from Habu Snake Venom, **220**, 225–226.

pre-mRNA
Influences of Separation and Adjacent Sequences on the Use of Alternative 5′ Splice Sites, **217**, 265–281.

pre-mRNA splicing
Spliceosomal Small Nuclear RNAs of *Tetrahymena thermophila* and Some Possible snRNA–snRNA Base-pairing Interactions, **222**, 219–232.

Pressure
Mapping Electrostatic Interactions in Macromolecular Associations, **221**, 1453–1460.

Priming site
Sequence Requirements for Protein-primed DNA Replication of Bacteriophage PRD1, **218**, 779–789.
Initiation of Bacteriophage PRD1 DNA Replication on Single-stranded Templates, **222**, 127–131.

Procollagen
Morphology of Sheet-like Assemblies of pN-collagen, pC-collagen and Procollagen Studied by Scanning Transmission Electron Microscopy Mass Measurements, **220**, 111–123.

Prokaryotic expression
Influence of mRNA Determinants on Translation Initiation in *Escherichia coli*, **218**, 83–97.
Detection of *Escherichia coli* Ribosome Binding at Translation Initiation Sites in the Absence of tRNA, **218**, 99–105.

***cis*-Proline**
Structure of Bovine Prothrombin Fragment 1 Refined at 2·25 Å Resolution, **220**, 481–494.

Proline kink
Proline Kinks in Transmembrane α-Helices, **218**, 499–503.
Supercoiling is Essential for the Formation and Stability of the Initiation Complex at the Divergent *malEp* and *malKp* Promoters, **218**, 529–542.

Prolines
Influence of Proline Residues on Protein Conformation, **218**, 397–412.

Promoter
Regulation of the F Plasmid *tra Y* Promoter in *Escherichia coli* by Host and Plasmid Factors, **218**, 119–128.
Control Regions of an Archaeal Gene. A TATA Box and an Initiator Element Promote Cell-free Transcription of the $tRNA^{Val}$ Gene of *Methanococcus vannielii*, **222**, 495–508.

Promoters
Organization and Function of Binding Sites for the Transcriptional Activator NifA in the *Klebsiella pneumoniae nifE* and *nifU* Promoters, **220**, 915–931.

Proofreading
Mutational Specificity of the *dnaE173* Mutator Associated with a Defect in the Catalytic Subunit of DNA Polymerase III of *Escherichia coli*, **222**, 925–936.
ms^2i^6 A Deficiency Enhances Proofreading in Translation, **222**, 1161–1171.

Protease digestion
Identification of the Site Important for the Actin-activated MgATPase Activity of Myosin Subfragment-1, **217**, 229–233.

Protease inhibitor
Three-dimensional Structure of the Complexes between Bovine Chymotrypsinogen A and Two Recombinant Variants of Human Pancreatic Secretory Trypsin Inhibitor (Kazal-type), **220**, 711–722.

Protein
Isolation, Crystallization, Crystal Structure Analysis and Refinement of Constitutive C-phycocyanin from the Chromatically Adapting Cyanobacterium *Fremyella diplosiphon* at 1·66 Å Resolution, **217**, 577–592.
Proton Nuclear Magnetic Resonance Study of the B9(Asp) Mutant of Human Insulin. Sequential Assignment and Secondary Structure, **218**, 221–231.
rRNA Binding Domain of Yeast Ribosomal Protein L25. Identification of its Borders and a Key Leucine Residue, **218**, 375–385.
π–π Interactions: the Geometry and Energetics of Phenylalanine–Phenylalanine Interactions in Proteins, **218**, 837–846.
Mapping Transition States of Protein Unfolding by Protein Engineering of Ligand-binding Sites, **221**, 1007–1014.

Protein aggregates
Construction, Expression and Release of Hybrid Colicins, **217**, 421–428.

Protein assembly
Assembly of *Octopus dofleini* Hemocyanin. A Study of the Kinetics by Sedimentation, Light Scattering and Electron Microscopy, **217**, 307–321.
Carboxy-terminal Phenylalanine is Essential for the Correct Assembly of a Bacterial Outer Membrane Protein, **218**, 141–148.

Protein conformation
Functional and Structural Effects of an Ala to Val Mutation in the Adenovirus Serotype 2 Fibre, **217**, 477–486.
Molecular Structure of Cytochrome c_2 Isolated from *Rhodobacter capsulatus* Determined at 2·5 Å Resolution, **220**, 673–685.

Protein crystallization
Crystallization of the Hybrid *Bacillus* (1-3,1-4)-β-Glucanase H(A16-M), **218**, 703–704.
Use of Chemical Modification in the Crystallization of Isocitrate Lyase from *Escherichia coli*, **220**, 13–16.
Purification, Crystallization and Preliminary X-ray Diffraction Studies of the *Pvu*II Endonuclease, **222**, 451–453.

Protein crystallography
Refined Crystal Structure of β-Lactamase from *Staphylococcus aureus* PC1 at 2·0 Å Resolution, **217**, 701–719.
Crystallization and Preliminary X-ray Investigation of Recombinant Human Interleukin 4, **218**, 675–678.
Refined Crystal Structures of "Aged" and "Non-aged" Organophosphoryl Conjugates of γ-Chymotrypsin, **221**, 909–918.
Crystallization and Preliminary X-ray Investigation of a Sarcoplasmic Calcium-binding Protein from Amphioxus, **221**, 1071–1073.
Crystallization of the IIA Domain of the Glucose Permease of *Bacillus subtilis*, **221**, 1079–1080.
Ribonuclease T_1 with Free Recognition and Catalytic Site: Crystal Structure Analysis at 1·5 Å Resolution, **222**, 335–352.

Protein crystals
Correlation of Metal Decoration and Topochemistry on Protein Surfaces, **221**, 637–645.
Characterization of Crystals of an Intact Monoclonal Antibody for Canine Lymphoma, **222**, 17–19.
Preliminary Investigation of Crystals of the Neutral Lipase from *Pseudomonas fluorescens*, **222**, 21–22.

Protein design
Suggestions for "Safe" Residue Substitutions in Site-directed Mutagenesis, **217**, 721–729.
Database Algorithm for Generating Protein Backbone and Side-chain Co-ordinates from a C^{α} Trace Application to Model Building and Detection of Co-ordinate Errors, **218**, 183–194.
Construction of New Ligand Binding Sites in Proteins of Known Structure. I. Computer-aided Modeling of Sites with Pre-defined Geometry, **222**, 763–785.
Construction of New Ligand Binding Sites in Proteins of Known Structure. II. Grafting of a Buried Transition Metal Binding Site into *Escherichia coli* Thioredoxin, **222**, 787–803.

Protein domains
Physical Studies of Tyrosine and Tryptophan Residues in Mammalian A1 Heterogeneous Nuclear Ribonucleoprotein. Support for a Segmented Structure, **221**, 693–709.

Protein dynamics
Solid-state Nuclear Magnetic Resonance Derived Model for Dynamics in the Polypeptide Backbone of the Gramicidin A Channel, **218**, 621–637.

Protein electrostatics
Intramolecular Dielectric Screening in Proteins, **218**, 859–886.

Protein engineering
Regulation of Filamentous Bacteriophage Length by Modification of Electrostatic Interactions Between Coat Protein and DNA, **217**, 223–227.
Suggestions for "Safe" Residue Substitutions in Site-directed Mutagenesis, **217**, 721–729.
Aromatic–Aromatic Interactions and Protein Stability. Investigation by Double-mutant Cycles, **218**, 465–475.
Crystallization of the Hybrid *Bacillus* (1-3,1-4)-β-Glucanase H(A16-M), **218**, 703–704.
Functional Role of the Distal Valine (E11) Residue of α Subunits in Human Haemoglobin, **218**, 761–767.
Chimaeric Myosin Regulatory Light Chains: Sub-domain Switching Experiments to Analyse the Function of the N-Terminal EF Hand, **218**, 825–835.
Side-chain Clusters in Protein Structures and Their Role in Protein Folding, **220**, 151–171.
Computational Method for the Design of Enzymes with Altered Substrate Specificity, **220**, 495–506.
Heterotropic Interactions in *Escherichia coli* Aspartate Transcarbamylase. Subunit Interfaces Involved in CTP Inhibition and ATP Activation, **220**, 789–799.

Protein evolution
A New Method for Building Protein Conformations from Sequence Alignments with Homologues of Known Structure, **217**, 1–7.
1-Aminocyclopropane-1-Carboxylate Synthase in Tomato is Encoded by a Multigene Family Whose Transcription is Induced During Fruit and Floral Senescence, **222**, 937–961.

Protein folding
Is the Hydrophobic Effect Stabilizing or Destabilizing in Proteins? The Contribution of Disulphide Bonds to Protein Stability, **217**, 389–398.
Anion and pH-dependent Conformational Transition of an Amphiphilic Polypeptide, **218**, 387–396.
Aromatic–Aromatic Interactions and Protein Stability. Investigation by Double-mutant Cycles, **218**, 465–475.
COSMIC Analysis of the Major α-Helix of Barnase during Folding, **219**, 5–9.
The Role of Internal Packing Interactions in Determining the Structure and Stability of a Protein, **219**, 359–376.

Side-chain Clusters in Protein Structures and Their Role in Protein Folding, **220**, 151–171.
Kinetic Analysis of the Acid and the Alkaline Unfolded States of Staphylococcal Nuclease, **220**, 771–778.
Surface Electrostatic Interactions Contribute Little to Stability of Barnase, **220**, 779–788.
In a Staphylococcal Nuclease Mutant the Side-chain of a Lysine Replacing Valine 66 is Fully Buried in the Hydrophobic Core, **221**, 7–14.
Dynamic Monte Carlo Simulations of a New Lattice Model of Globular Protein Folding, Structure and Dynamics, **221**, 499–531.
Prediction of Protein Backbone Conformation Based on Seven Structure Assignments. Influence of Local Interactions, **221**, 961–979.
Stable Submolecular Folding Units in a Non-compact Form of Cytochrome *c*, **221**, 1045–1061.
(14–38, 30–51) Double-disulphide Intermediate in Folding of Bovine Pancreatic Trypsin Inhibitor: A Two-dimensional ^{1}H Nuclear Magnetic Resonance, **222**, 353–371.
Two-dimensional ^{1}H Nuclear Magnetic Resonance Study of the (5–55) Single-disulphide Folding Intermediate of Bovine Pancreatic Trypsin Inhibitor, **222**, 373–390.
Role of Electrostatic Repulsion in the Acidic Molten Globule of Cytochrome *c*, **222**, 679–686.
Molecular Basis of Co-operativity in Protein Folding, **222**, 687–698.
A Simplified Mechanical Model of Proteins Tested on the Globin Fold, **222**, 805–817.
Generalized Protein Tertiary Structure Recognition using Associative Memory Hamiltonians, **222**, 1013–1034.

Protein hydration
Analysis of Protein Main-chain Solvation as a Function of Secondary Structure, **221**, 669–691.

Protein kinase
Crystallization Studies of cAMP-dependent Protein Kinase. Cocrystals of the Catalytic Subunit with a 20 Amino Acid Residue Peptide Inhibitor and MgATP Diffract to 3·0 Å Resolution, **220**, 217–220.

Protein modeling
Amino Acid Similarity Coefficients for Protein Modeling and Sequence Alignment Derived from Main-chain Folding Angles, **219**, 481–497.

Protein molecular dynamics
A Nuclear Magnetic Resonance Study of the Hydrogen-Exchange Behaviour of Lysozyme in Crystals and Solution, **218**, 413–426.

Protein phosphorylation
Crystallization of the IIA Domain of the Glucose Permease of *Bacillus subtilis*, **221**, 1079–1080.

Protein priming
Analysis of Replicative Intermediates Produced during Bacteriophage ϕ29 DNA Replication *in Vitro*, **222**, 983–994.

Protein secretion
Construction, Expression and Release of Hybrid Colicins, **217**, 421–428.

Protein sequence alignment
Amino Acid Similarity Coefficients for Protein Modeling and Sequence Alignment Derived from Main-chain Folding Angles, **219**, 481–497.

Protein sequence comparison
Motif Recognition and Alignment for Many Sequences by Comparison of Dot-matrices, **218**, 33–43.

Protein stability
Aromatic–Aromatic Interactions and Protein Stability. Investigation by Double-mutant Cycles, **218**, 465–475.
COSMIC Analysis of the Major α-Helix of Barnase during Folding, **219**, 5–9.
Isolation and *in Vitro* Characterization of Temperature-sensitive Mutants of the Bacteriophage f1 Gene V Protein, **219**, 257–275.
Surface Electrostatic Interactions Contribute Little to Stability of Barnase, **220**, 779–788.
In a Staphylococcal Nuclease Mutant the Side-chain of a Lysine Replacing Valine 66 is Fully Buried in the Hydrophobic Core, **221**, 7–14.
Structural and Thermodynamic Analysis of the Packing of Two α-Helices in Bacteriophage T4 Lysozyme, **221**, 647–667.
Molecular Basis of Co-operativity in Protein Folding, **222**, 687–698.
Solid Model Compounds and the Thermodynamics of Protein Unfolding, **222**, 699–709.

Protein structure
A New Method for Building Protein Conformations from Sequence Alignments with Homologues of Known Structure, **217**, 1–7.
Distinct Forms of the Protein Kinase-dependent Activator of Tyrosine and Trytophan Hydroxylases, **217**, 125–132.
Sub-domain Structure of Lipid-bound Annexin-V Resolved by Electron Image Analysis, **217**, 241–245.
Prediction of Protein Side-chain Conformation by Packing Optimization, **217**, 373–388.
Efficient Computation of Three-dimensional Protein Structures in Solution from Nuclear Magnetic Resonance Data Using the Program DIANA and the Supporting Programs CALIBA, HABAS and GLOMSA, **217**, 517–530.
Structure Determination of the *Antp(C39 → S)* Homeodomain from Nuclear Magnetic Resonance Data in Solution using a Novel Strategy for the Structure Calculation with the Programs DIANA, CALIBA, HABAS and GLOMSA, **217**, 531–540.
The Refined Structure of the Complex between Adenylate Kinase from Beef Heart Mitochondrial Matrix and its Substrate AMP at 1·85 Å Resolution, **217**, 541–549.
Suggestions for "Safe" Residue Substitutions in Site-directed Mutagenesis, **217**, 721–729.
Accurate Measurements of Coupling Constants from Two-dimensional Nuclear Magnetic Resonance Spectra of Proteins and Determination of ϕ-Angles, **217**, 731–736.
Proline Kinks in Transmembrane α-Helices, **218**, 499–503.
Supercoiling is Essential for the Formation and Stability of the Initiation Complex at the Divergent *malEp* and *malKp* Promoters, **218**, 529–542.
Experimental Determination of Torsion Angles in the Polypeptide Backbone of the Gramicidin A Channel by Solid State Nuclear Magnetic Resonance, **218**, 607–619.
Crystallization of Human Thymidylate Synthase, **219**, 161–163.
Amino Acid Similarity Coefficients for Protein Modeling and Sequence Alignment Derived from Main-chain Folding Angles, **219**, 481–497.
Structure of Soluble and Membrane-bound Human Annexin V, **220**, 199–203.
Low-resolution Structure of Recombinant Human Granulocyte–Macrophage Colony Stimulating Factor, **221**, 55–60.
Mutational Analysis of the Structure and Function of the Adenine Phosphoribosyltransferase Enzyme of Chinese Hamster, **221**, 163–174.
High-resolution Solution Structure of Reduced French Bean Plastocyanin and Comparison with the Crystal Structure of Poplar Plastocyanin, **221**, 533–555.
β-Breakers: An Aperiodic Secondary Structure, **221**, 603–613.
Cumulative Site-directed Charge–Change Replacements in Bacteriophage T4 Lysozyme Suggest that Long-range Electrostatic Interactions Contribute Little to Protein Stability, **221**, 873–887.
Stable Submolecular Folding Units in a Non-compact Form of Cytochrome *c*, **221**, 1045–1061.
Sequence-specific ^{1}H n.m.r. Assignments and Determination of the Three-dimensional Structure of Reduced *Escherichia coli* Glutaredoxin, **221**, 1311–1324.
Relationship between Nuclear Magnetic Resonance Chemical Shift and Protein Secondary Structure, **222**, 311–333.

Ribonuclease T_1 with Free Recognition and Catalytic Site: Crystal Structure Analysis at 1·5 Å Resolution, **222**, 335–352.

Protein structure and function
Temperature-sensitive Variants of *Saccharomyces cerevisiae* Iso-1-cytochrome *c* Produced by Random Mutagenesis of Codons 43 to 54, **221**, 97–105.

Protein structure prediction
A Simple Method to Generate Non-trivial Alternate Alignments of Protein Sequences, **219**, 727–732.
Side-chain Clusters in Protein Structures and Their Role in Protein Folding, **220**, 151–171.
Generalized Protein Tertiary Structure Recognition using Associative Memory Hamiltonians, **222**, 1013–1034.

Protein structure superposition
Suboptimal Sequence Alignment in Molecular Biology. Alignment with Error Analysis, **221**, 403–419.

Protein subunit interactions
Heterotropic Interactions in *Escherichia coli* Aspartate Transcarbamylase. Subunit Interfaces Involved in CTP Inhibition and ATP Activation, **220**, 789–799.

Protein synthesis
ms^2i^6 A Deficiency Enhances Proofreading in Translation, **222**, 1161–1171.

Protein synthesis inhibitor
Crystallization and Preliminary Characterization of Mitogillin, a Ribosomal Ribonuclease from *Aspergillus restrictus*, **218**, 489–492.

Proteinase
Molecular Recognition. Conformational Analysis of Limited Proteolytic Sites and Serine Proteinase Protein Inhibitors, **220**, 507–530.

Proteinase inhibitor
Crystallization and Preliminary Crystallographic Study of Cathepsin D Inhibitor from Potatoes, **218**, 21–22.
Crystal Structure of Cleaved Human α_1-Antichymotrypsin at 2·7 Å Resolution and its Comparison with other Serpins, **218**, 595–606.

Proteinase inhibitors
Effect of Single Amino Acid Replacements on the Thermodynamics of the Reactive Site Peptide Bond Hydrolysis in Ovomucoid Third Domain, **220**, 1041–1053.

Protein–DNA complex
Tyr60 Variants of Flp Recombinase Generate Conformationally Altered Protein–DNA Complexes. Differential Activity in Full-site and Half-site Recombinations, **218**, 107–118.

Protein–DNA interaction
Shared Operator Recognition Specificity between Trp Repressor and the Repressors of Bacteriophage 434, **217**, 599–602.
Mutations that Confer *de Novo* Activity upon a Maintenance Methyltransferase, **221**, 431–440.
DNase I-induced DNA Conformation. 2 Å Structure of a DNase I–Octamer Complex, **222**, 645–667.

Protein–DNA interactions
Crystallization and Preliminary X-ray Diffraction Studies of a MATα2–DNA Complex, **217**, 11–13.
RecA-mediated Annealing of Single-stranded DNA and Its Relation to the Mechanism of Homologous Recombination, **221**, 131–145.
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. I. Characterization of Elongation Complexes, **221**, 1091–1110.
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. II. Stability and Some Properties of Elongation Complexes, **221**, 1111–1125.
DNA-induced Dimerization of the *Escherichia coli* Rep Helicase, **221**, 1165–1181.

Protein–DNA recognition
The Roles of Residues 5 and 9 of the Recognition Helix of Lac Repressor in *lac* Operator Binding, **218**, 313–321.

Protein–nucleic acid interactions
Crystal Structure of a Barnase–d(GpC) Complex at 1·9 Å Resolution, **219**, 123–132.
Isolation and *in Vitro* Characterization of Temperature-sensitive Mutants of the Bacteriophage f1 Gene V Protein, **219**, 257–275.

Protein–peptide interaction
Crystals of a Bovine Neurophysin II Tripeptide Complex, **222**, 23–25.

Protein–protein interaction
Refined Crystal Structure of the Complex of Subtilisin BPN′ and *Streptomyces* Subtilisin Inhibitor at 1·8 Å Resolution, **221**, 309–325.

Protein–protein interface
Angular Disorder in Actin: Is It Consistent with General Principles of Protein Structure?, **217**, 405–408.

Protein–RNA interactions
Attachment Sites of Primary Binding Proteins L1, L2 and L23 on 23 S Ribosomal RNA of *Escherichia coli*, **222**, 251–264.

Protein–RNA recognition
Recognition of the Highly Conserved GTPase Center of 23 S Ribosomal RNA by Ribosomal Protein L11 and the Antibiotic Thiostrepton, **221**, 1257–1268.

Proteins
Crystallization and Preliminary X-ray Diffraction Studies of Nucleoside Diphosphate Kinase from *Dictyostelium discoideum*, **217**, 239–240.
Influence of Proline Residues on Protein Conformation, **218**, 397–412.
Protein Docking and Complementarity, **221**, 327–346.
Estimation of Macromolecule Concentrations and Excluded Volume Effects for the Cytoplasm of *Escherichia coli*, **222**, 599–620.

Proteins L1, L2, L23
Attachment Sites of Primary Binding Proteins L1, L2 and L23 on 23 S Ribosomal RNA of *Escherichia coli*, **222**, 251–264.

Prothrombin
Structure of Bovine Prothrombin Fragment 1 Refined at 2·25 Å Resolution, **220**, 481–494.

Proton n.m.r.
^1H and ^{31}P Nuclear Magnetic Resonance Studies of Spermine Binding to the *Z*-DNA form of $d(m^5CGm^5CGm^5CG)_2$. Evidence for Decreased Spermine Mobility, **219**, 585–590.

Proton pump
Crystallization and Preliminary X-ray Crystallographic Studies of Bovine Heart Mitochondrial Cytochrome bc_1 Complex, **221**, 379–382.

Protoporphyria
Isolation and Characterization of Visible Light-sensitive Mutants of *Escherichia coli* K12, **219**, 393–398.

Protoporphyrin IX
Isolation and Characterization of Visible Light-sensitive Mutants of *Escherichia coli* K12, **219**, 393–398.

Proto-splice site
Genomic Structure of *Chlamydomonas* Caltractin. Evidence for Intron Insertion Suggests a Probable Geneology for the EF-hand Superfamily of Proteins, **221**, 175–191.

Protozoa
Cysteine Residue Periodicity is a Conserved Structural Feature of Variable Surface Proteins from *Paramecium tetraurelia*, **222**, 835–841.

Pseudoazurin
Preliminary Crystallographic Study of a Pseudoazurin from Methylotrophic Bacterium, *Methylobacterium extorquens* AM1, **218**, 19–20.

"Pseudoknot"
Function of P11, a Tertiary Base Pairing in Self-splicing Introns of Subgroup IA, **221**, 1153–1164.

Pseudomonas aeruginosa
X-ray Crystal Structure of the Two Site-specific Mutants His35Gln and His35Leu of Azurin from *Pseudomonas aeruginosa*, **218**, 427–447.

Psoralen
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. I. Characterization of Elongation Complexes, **221**, 1091–1110.
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. II. Stability and Some Properties of Elongation Complexes, **221**, 1111–1125.

Psoralen cross-linking
Analysis of Replicative Intermediates Produced during Bacteriophage ϕ29 DNA Replication *in Vitro*, **222**, 983–994.

Pulsed-field gel electrophoresis
Complete Physical Map of the *Bacillus subtilis* 168 Chromosome Constructed by a Gene-directed Mutagenesis Method, **220**, 631–648.

Purification
Purification, Crystallization and Preliminary Crystallographic Analysis of Porcine Aldose Reductase, **218**, 695–698.
Crystallization and Preliminary X-ray Crystallographic Studies of CO-hemoglobin from the North Atlantic Salmon (*Salmo salar*), **220**, 829–830.

Purine binding
Mutational Analysis of the Structure and Function of the Adenine Phosphoribosyltransferase Enzyme of Chinese Hamster, **221**, 163–174.

*Pvu*II endonuclease
Purification, Crystallization and Preliminary X-ray Diffraction Studies of the *Pvu*II Endonuclease, **222**, 451–453.

Qβ
Secondary Structure of Coliphage Qβ RNA. Analysis by Electron Microscopy, **221**, 557–570.

Qβ replicase
Efficient Templates for Qβ Replicase are Formed by Recombination from Heterologous Sequences, **221**, 463–472.
On the Nature of Spontaneous RNA Synthesis by Qβ Replicase, **222**, 3–9.

Quaternary structure
Hierarchy of Globin Complexes. The Quaternary Structure of the Extracellular Chlorocruorin of *Eudistylia vancouverii*, **222**, 1109–1129.

R 61837
Human Rhinovirus 14 Complexed with Antiviral Compound R 61837, **217**, 455–463.

RACE
Structure and Inheritance of Sense and Anti-sense Transcripts from a Transposon in the Green Alga *Chlamydomonas reinhardtii*, **218**, 273–291.

RAD6
Stable Ester Conjugate between the *Saccharomyces cerevisiae* RAD6 Protein and Ubiquitin Has no Biological Activity, **221**, 745–749.

Ral
Mutations that Confer *de Novo* Activity upon a Maintenance Methyltransferase, **221**, 431–440.

Random mutagenesis
Temperature-sensitive Variants of *Saccharomyces cerevisiae* Iso-1-cytochrome *c* Produced by Random Mutagenesis of Codons 43 to 54, **221**, 97–105.
Mutations in the MotA Protein of *Escherichia coli* Reveal Domains Critical for Proton Conduction, **221**, 1433–1442.

Rapid freezing
Direct Determination of Myosin Filament Symmetry in Scallop Striated Adductor Muscle by Rapid Freezing and Freeze Substitution, **220**, 125–132.

ras oncogenes
Crystal Structures at 2·2 Å Resolution of the Catalytic Domains of Normal *ras* Protein and an Oncogenic Mutant Complexed with GDP, **217**, 503–516.

ras proteins
Crystal Structures at 2·2 Å Resolution of the Catalytic Domains of Normal *ras* Protein and an Oncogenic Mutant Complexed with GDP, **217**, 503–516.

ras val-12 mutant
Crystal Structures at 2·2 Å Resolution of the Catalytic Domains of Normal *ras* Protein and an Oncogenic Mutant Complexed with GDP, **217**, 503–516.

Rat mitichondrial DNA
Mitochondrial D-loop Sequences are Integrated in the Rat Nuclear Genome, **221**, 1223–1235.

Rat nuclear DNA
Mitochondrial D-loop Sequences are Integrated in the Rat Nuclear Genome, **221**, 1223–1235.

5 S rDNA
Chromatosome Positioning on Assembled Long Chromatin. Linker Histones Affect Nucleosome Placement on 5 S rDNA, **220**, 89–100.
Mobility of Positioned Nucleosomes on 5 S rDNA, **220**, 101–110.

rDNA intergenic region
rDNA Intergenic Region from *Arabidopsis thaliana*. Structural Analysis, Intraspecific Variation and Functional Implications, **221**, 1209–1222.

Reaction mechanism
Reaction Mechanism of Alkaline Phosphatase Based on Crystal Structures. Two-metal Ion Catalysis, **218**, 449–464.

Reactive centre
Crystal Structure of Uncleaved Ovalbumin at 1·95 Å Resolution, **221**, 941–959.

Reassembly
Generation of Infectious Nucleocapsids by *in Vitro* Assembly of the Shell Protein on to the Polymerase Complex of the dsRNA Bacteriophage ϕ6, **218**, 569–581.

RecA protein
The Effects on Strand Exchange of 5′ *Versus* 3′ Ends of Single-stranded DNA in RecA Nucleoprotein Filaments, **219**, 645–654.
RecA-mediated Annealing of Single-stranded DNA and Its Relation to the Mechanism of Homologous Recombination, **221**, 131–145.

RecA–DNA complexes
RecA-mediated Annealing of Single-stranded DNA and Its Relation to the Mechanism of Homologous Recombination, **221**, 131–145.

Receptor
Single Mutations in a Gene for a Tail Fiber Component of an *Escherichia coli* Phage can Cause an Extension from a Protein to a Carbohydrate as a Receptor, **219**, 655–663.
Crystallization and Preliminary X-ray Diffraction Study of the Ligand-binding Domain of the Bacterial Chemotaxis-mediating Aspartate Receptor of *Salmonella typhimurium*, **221**, 31–34.

Receptor binding
Comparison of the Solution Nuclear Magnetic Resonance and Crystal Structures of Interleukin-8. Possible Implications for the Mechanism of Receptor Binding, **217**, 611–620.

Receptor structure
Crystallization and X-ray Diffraction Studies of a Soluble Form of Human Transferrin Receptor, **218**, 685–689.

Receptors
Detection of Transmembrane Linkages between Immunoglobulin or Complement Receptors and the Neutrophil's Cortical Microfilaments by Resonance Energy Transfer Microscopy, **218**, 263–268.

Recognition
Molecular Recognition. Conformational Analysis of Limited Proteolytic Sites and Serine Proteinase Protein Inhibitors, **220**, 507–530.
Initiation of Bacteriophage PRD1 DNA Replication on Single-stranded Templates, **222**, 127–131.

Recognition helix
The Roles of Residues 5 and 9 of the Recognition Helix of Lac Repressor in *lac* Operator Binding, **218**, 313–321.

Recombinant protein
Preliminary X-ray Crystallographic Analysis of a Modified Basic Fibroblast Growth Factor, **218**, 493–494.

Recombination
A Large Number of tRNA Genes are Symmetrically Located in Fission Yeast Centromeres, **218**, 13–17.
Reiterated Gene Amplifications at Specific Short Homology Sequences in Phage T4 Produce Hp17 Mutants, **218**, 705–721.
Effects of Base Mismatches on the Structure of the Four-way DNA junction, **221**, 147–161.
Model for the Interaction of DNA Junctions and Resolving Enzymes, **221**, 1191–1207.
Parallel and Antiparallel Holliday Junctions Differ in Structure and Stability, **221**, 1419–1432.

Recombination sequences
Sequence and Comparative Analysis of the Rabbit α-Like Globin Gene Cluster Reveals a Rapid Mode of Evolution in a G + C-rich Region of Mammalian Genomes, **222**, 233–249.

Reconstitution
Preparing Well-oriented Sols of Straight Bacterial Flagellar Filaments for X-ray Fiber Diffraction, **217**, 293–302.
Extended C-Terminal Tail of Wheat Histone H2A Interacts with DNA of the "Linker" Region, **218**, 805–813.
Poly[d(A-T)] and Other Synthetic Polydeoxynucleotides Containing Oligoadenosine Tracts form Nucleosomes Easily, **222**, 1149–1160.

Redox proteins
Molecular Structure of Cytochrome c_2 Isolated from *Rhodobacter capsulatus* Determined at 2·5 Å Resolution, **220**, 673–685.
Sequence-specific ^{1}H n.m.r. Assignments and Determination of the Three-dimensional Structure of Reduced *Escherichia coli* Glutaredoxin, **221**, 1311–1324.

Reference libraries
Use of High Coverage Reference Libraries of *Drosophila melanogaster* for Relational Data Analysis. A Step Towards Mapping and Sequencing of the Genome, **220**, 903–914.

Refined structure
Refined Atomic Structures of N9 Subtype Influenza Virus Neuraminidase and Escape Mutants, **221**, 487–497.

Refinement
Structures of Deoxy and Oxy Hemerythrin at 2·0 Å Resolution, **218**, 583–593.
Manganese Superoxide Dismutase from *Thermus thermophilus*. A Structural Model Refined at 1·8 Å Resolution, **219**, 335–358.
Structures of Met and Azidomet Hemerythrin at 1·66 Å Resolution, **220**, 723–737.

Regulation
A Folded (10 S) Conformer of Myosin from a Striated Muscle and its Implications for Regulation of ATPase Activity, **217**, 323–335.
Regulation of the F Plasmid *tra Y* Promoter in *Escherichia coli* by Host and Plasmid Factors, **218**, 119–128.
Transcriptional Organization of the *Escherichia coli dnaX* Gene, **220**, 649–658.

Regulation of gene expression
In Vitro Assembly of a Positioned Nucleosome near the Hypersensitive Region in Simian Virus 40 Chromatin, **221**, 795–803.

Regulatory light chains
Chimaeric Myosin Regulatory Light Chains: Sub-domain Switching Experiments to Analyse the Function of the N-Terminal EF Hand, **218**, 825–835.

Relative molecular mass
Preparation and X-ray Characterization of Four New Crystal Forms of Jacalin, a Lectin from *Artocarpus integrifolia*, **221**, 773–776.

Release factor
Effects of the Nucleotide 3′ to an Amber Codon on Ribosomal Selection Rates of Suppressor tRNA and Release Factor-1, **219**, 231–241.

REP elements
An Efficient Algorithm for Identifying Matches with Errors in Multiple Long Molecular Sequences, **221**, 1367–1378.

REP sequences
mRNA Degradation by Processive 3′–5′ Exoribonucleases *in Vitro* and the Implications for Prokaryotic mRNA Decay *in Vivo*, **221**, 81–95.

Repair
Repair of Helix-stabilizing Anthramycin–N2 Guanine DNA Adducts by UVRA and UVRB Proteins, **220**, 855–866.
Model for the Interaction of DNA Junctions and Resolving Enzymes, **221**, 1191–1207.

Repeated DNA
Characterization of a Tandemly Repeated DNA Sequence Family Originally Derived by Retroposition of $tRNA^{Glu}$ in the Newt, **222**, 391–404.

Repetitive DNA
A Widely Distributed "CAT" Family of Repetitive DNA Sequences, **217**, 629–635.

Repetitive elements
Transfer RNA Genes from *Dictyostelium discoideum* are Frequently Associated with Repetitive Elements and Contain Consensus Boxes in their 5′-and 3′-Flanking Regions, **222**, 537–552.

Repetitive sequence
Structures and Organization of Major Plasma Protein Genes of the Silkworm *Bombyx mori*, **218**, 7–12.

Repetitive sequences
rDNA Intergenic Region from *Arabidopsis thaliana*. Structural Analysis, Intraspecific Variation and Functional Implications, **221**, 1209–1222.

Replication
Monomers of the *Escherichia coli* SSB-1 Mutant Protein Bind Single-stranded DNA, **217**, 63–74.
DNA-induced Dimerization of the *Escherichia coli* Rep Helicase, **221**, 1165–1181.
Topoisomer Heterogeneity of Plasmid Chromatin in Living Cells, **222**, 133–137.
Normal *terC*-Region of the *Bacillus subtilis* Chromosome Acts in a Polar Manner to Arrest the Clockwise Replication Fork, **222**, 197–207.
Distribution of Topoisomerase II Cleavage Sites in Simian Virus 40 DNA and the Effects of Drugs, **222**, 909–924.

Replication control
The Stringent Response Blocks DNA Replication Outside the *ori* Region in *Bacillus subtilis* and at the Origin in *Escherichia coli*, **219**, 605–613.

Replication origin
Transcriptional Enhancer in the Vicinity of a Replication Origin within the 5′ Region of the Chicken α-Globin Gene Domain, **217**, 595–598.

Replication origins
Unidirectional Replication as Visualized by Two-dimensional Agarose Gel Electrophoresis, **220**, 843–853.

Replication termini
Unidirectional Replication as Visualized by Two-dimensional Agarose Gel Electrophoresis, **220**, 843–853.

Replicative intermediates
Unidirectional Replication as Visualized by Two-dimensional Agarose Gel Electrophoresis, **220**, 843–853.

Repressor
CAP and Nag Repressor Binding to the Regulatory Regions of the *nagE-B* and *manX* Genes of *Escherichia coli*, **217**, 661–679.
In Vivo Interaction of *Escherichia coli lac* Repressor N-Terminal Fragments with the *lac* Operator, **219**, 623–634.
Identification of DNA Sequences Involved in Regulating *Bacillus subtilis glnRA* Expression by the Nitrogen Source, **220**, 241–253.
EnvZ Controls the Concentration of Phosphorylated OmpR to Mediate Osmoregulation of the Porin Genes, **222**, 567–580.

λ repressor
The Role of Internal Packing Interactions in Determining the Structure and Stability of a Protein, **219**, 359–376.

Rescue from integrated state
In Vitro Rescue of an Integrated Hybrid Adeno-associated Virus/Simian Virus 40 Genome, **218**, 791–804.

Reseeding
Crystallization of the Calcium-activated Phosphoenolpyruvate Carboxykinase from *Escherichia coli* K12, **219**, 593–594.

Resolution
Crystal Structure of Rat Trypsin-S195C at −150°C. Analysis of Low Activity of Recombinant and Semisynthetic Thiol Proteases, **219**, 511–523.

Respiratory chain
Electron Microscopic Analysis of the Peripheral and Membrane Parts of Mitochondrial NADH Dehydrogenase (Complex I), **221**, 1027–1043.

Restriction and modification
Mutations that Confer *de Novo* Activity upon a Maintenance Methyltransferase, **221**, 431–440.

Restriction enzyme/ *Eco*RV endonuclease
Crystallization of Complexes of *Eco*RV Endonuclease with Cognate and Non-cognate DNA Fragments, **217**, 235–238.

Restriction-modification systems
Purification, Crystallization and Preliminary X-ray Diffraction Studies of the *Pvu*II Endonuclease, **222**, 451–453.

Retroposon
Characterization of a Tandemly Repeated DNA Sequence Family Originally Derived by Retroposition of $tRNA^{Glu}$ in the Newt, **222**, 391–404.

Reverse transcriptase
Mutations of a Conserved Residue within HIV-1 Ribonuclease H Affect Its Exo-and Endonuclease Activities, **220**, 801–818.
Secondary Structure of the Ribonuclease H Domain of the Human Immunodeficiency Virus Reverse Transcriptase in Solution using Three-Dimensional Double and Triple Resonance Heteronuclear Magnetic Resonance Spectroscopy, **221**, 1081–1090.

Reverse turns
A Nuclear Magnetic Resonance Study of the Hydrogen-Exchange Behaviour of Lysozyme in Crystals and Solution, **218**, 413–426.

Rhinovirus
Human Rhinovirus 14 Complexed with Antiviral Compound R 61837, **217**, 455–463.

Rhizobium meliloti
Identification of NolR, a Negative Transacting Factor Controlling the *nod* Regulon in *Rhizobium meliloti*, **222**, 885–896.

Rho
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interactions with RNA. I. Cryoelectron Microscopic Studies, **221**, 1127–1138.

Rhodococcus
Crystallization of a Photosensitive Nitrile Hydratase from *Rhodococcus* sp. N-771, **220**, 221–222.

Ribloflavin synthase
Correlation of Metal Decoration and Topochemistry on Protein Surfaces, **221**, 637–645.

Ribonuclease
Crystallization and Preliminary Characterization of Mitogillin, a Ribosomal Ribonuclease from *Aspergillus restrictus*, **218**, 489–492.
Crystal Structure of a Barnase–d(GpC) Complex at 1·9 Å Resolution, **219**, 123–132.

Ribonuclease E
Decay of mRNA Encoding Ribosomal Protein S15 of *Escherichia coli* Is Initiated by an RNase E-dependent Endonucleolytic Cleavage that Removes the 3′ Stabilizing Stem and Loop Structure, **217**, 283–292.

Ribonuclease II
mRNA Degradation by Processive 3′–5′ Exoribonucleases *in Vitro* and the Implications for Prokaryotic mRNA Decay *in Vivo*, **221**, 81–95.

Ribonuclease T_1
Ribonuclease T_1 with Free Recognition and Catalytic Site: Crystal Structure Analysis at 1·5 Å Resolution, **222**, 335–352.

Ribosomal accuracy
ms^2i^6 A Deficiency Enhances Proofreading in Translation, **222**, 1161–1171.

Ribosomal frameshifting
Mutational Analysis of the RNA Pseudoknot Component of a Coronavirus Ribosomal Frameshifting Signal, **220**, 889–902.

Ribosomal GTPase
Recognition of the Highly Conserved GTPase Center of 23 S Ribosomal RNA by Ribosomal Protein L11 and the Antibiotic Thiostrepton, **221**, 1257–1268.

Ribosomal protein
In Vivo Analysis of Overlapping Transcription Units in the *rplKAJLrpoBC* Ribosomal Protein–DNA Polymerase Gene Cluster of *Escherichia coli*, **218**, 23–31.
Crystals of Protein S6 from the 30 S Ribosomal Subunit of *Thermus thermophilus*, **220**, 549–550.
Identification and Functional Analysis of the Nuclear Localization Signals of Ribosomal Protein L25 from *Saccharomyces cerevisiae*, **221**, 225–237.

Ribosomal protein L11
Recognition of the Highly Conserved GTPase Center of 23 S Ribosomal RNA by Ribosomal Protein L11 and the Antibiotic Thiostrepton, **221**, 1257–1268.

Ribosomal protein S1 mRNA binding region
Spatial Organization of Template Polynucleotides on the Ribosome Determined by Fluorescence Methods, **221**, 441–453.

Ribosomal RNA
Structural Studies on Site-directed Mutants of Domain 3 of *Xenopus laevis* Oocyte 5 S Ribosomal RNA, **219**, 243–255.
Recognition of the Highly Conserved GTPase Center of 23 S Ribosomal RNA by Ribosomal Protein L11 and the Antibiotic Thiostrepton, **221**, 1257–1268.
Specificity of Antitermination Mechanisms. Suppression of the Terminator Cluster T1-T2 of *Escherichia coli* Ribosomal RNA operon, *rrnB*, by Phage λ Antiterminators, **222**, 59–66.
Attachment Sites of Primary Binding Proteins L1, L2 and L23 on 23 S Ribosomal RNA of *Escherichia coli*, **222**, 251–264.

5 S ribosomal RNA
Three-dimensional Model of *Escherichia coli* Ribosomal 5 S RNA as Deduced from Structure Probing in Solution and Computer Modeling, **221**, 293–308.

Ribosomal RNA gene (rDNA)
Structure of the Core Promoter of Human and Mouse Ribosomal RNA Gene. Asymmetry of Species-specific Transcription, **218**, 55–67.

Ribosome
Higher-order Structure of the 5·8 S rRNA Sequence within the Yeast 35 S Precursor Ribosomal RNA Synthesized *in Vitro*, **217**, 649–659.
rRNA Binding Domain of Yeast Ribosomal Protein L25. Identification of its Borders and a Key Leucine Residue, **218**, 375–385.
Escherichia coli Ribosome is Inactivated by Mirabilis Antiviral Protein which Cleaves the *N*-Glycosidic Bond at A2660 of 23 S Ribosomal RNA, **221**, 737–743.
Computer Modeling 16 S Ribosomal RNA, **221**, 889–907.
Absolute *in Vivo* Translation Rates of Individual Codons in *Escherichia coli*. The Two Glutamic Acid Codons GAA and GAG Are Translated with a Threefold Difference in Rate, **222**, 265–280.

Ribosome binding sequence
Bacterial Expression of Rat Liver Succinyl-CoA Synthetase α-Subunit, **219**, 165–174.

Ribosome binding sites
Influence of mRNA Determinants on Translation Initiation in *Escherichia coli*, **218**, 83–97.
Detection of *Escherichia coli* Ribosome Binding at Translation Initiation Sites in the Absence of tRNA, **218**, 99–105.

Ribosome-inactivating
Escherichia coli Ribosome is Inactivated by Mirabilis Antiviral Protein which Cleaves the *N*-Glycosidic Bond at A2660 of 23 S Ribosomal RNA, **221**, 737–743.

Ribosomes
Characterization and Preliminary Attempts for Derivatization of Crystals of Large Ribosomal Subunits from *Haloarcula marismortui* Diffracting to 3 Å Resolution, **222**, 11–15.

Ribozyme
Restoration of the Self-splicing Activity of a Defective Group II Intron by a Small *Trans*-acting RNA, **222**, 179–187.
An Axial Binding Site in the *Tetrahymena* Precursor RNA, **222**, 995–1012.

Ribozymes
Nuclear Magnetic Resonance Studies of the Hammerhead Ribozyme Domain. Secondary Structure Formation and Magnesium Ion Dependence, **217**, 113–124.

Ricin A-chain
Ribosomal RNA Identity Elements for Ricin A-chain Recognition and Catalysis, **221**, 193–207.

RNA
Secondary Structure of Coliphage Qβ RNA. Analysis by Electron Microscopy, **221**, 557–570.
An Axial Binding Site in the *Tetrahymena* Precursor RNA, **222**, 995–1012.

16 S RNA
Computer Modeling 16 S Ribosomal RNA, **221**, 889–907.

RNA catalysis
Splice Site Selection and Role of the Lariat in a Group II Intron, **219**, 415–428.
Restoration of the Self-splicing Activity of a Defective Group II Intron by a Small *Trans*-acting RNA, **222**, 179–187.

RNA engineering
Involvement of "Hinge" Nucleotides of *Xenopus laevis* 5 S rRNA in the RNA Structural Organization and in the Binding of Transcription Factor TFIIIA, **218**, 69–81.

RNA evolution
Secondary Structure as a Constraint on the Evolution of a Plant Viral Satellite RNA, **221**, 1065–1069.

RNA fast protein liquid chromatography
Crystallization and Preliminary Diffraction Studies of 5 S rRNA from the Thermophilic Bacterium *Thermus flavus*, **219**, 399–402.

RNA footprinting
Attachment Sites of Primary Binding Proteins L1, L2 and L23 on 23 S Ribosomal RNA of *Escherichia coli*, **222**, 251–264.

RNA genome sequence
Putative 65 kDa Protein of Beet Yellows Closterovirus Is a Homologue of HSP70 Heat Shock Proteins, **217**, 603–610.

RNA I
Complexes Formed by Complementary RNA Stem-loops. Their Formations, Structures and Interaction with ColE1 Rom Protein, **220**, 831–842.

RNA II
Complexes Formed by Complementary RNA Stem-loops. Their Formations, Structures and Interaction with ColE1 Rom Protein, **220**, 831–842.

RNA interaction
rRNA Binding Domain of Yeast Ribosomal Protein L25. Identification of its Borders and a Key Leucine Residue, **218**, 375–385.

RNA mapping
Transcriptional Organization of the *Escherichia coli dnaX* Gene, **220**, 649–658.

RNA plant virus
Interactions between Viral Coat Protein and a Specific Binding Region on Turnip Crinkle Virus RNA, **222**, 437–443.

RNA Polymerase
Identification of a Subunit Assembly Domain in the Alpha Subunit of *Escherichia coli* RNA Polymerase, **218**, 1–6.

RNA polymerase
In Vivo Analysis of Overlapping Transcription Units in the *rplKAJLrpoBC* Ribosomal Protein–DNA Polymerase Gene Cluster of *Escherichia coli*, **218**, 23–31.
Catabolite Activator Protein-induced DNA Bending in Transcription Initiation, **219**, 201–215.
Spatial Arrangement of σ-Factor and Core Enzyme of *Escherichia coli* RNA Polymerase. A Neutron Solution Scattering Study, **219**, 747–755.
Sigma Subunit of *Escherichia coli* RNA Polymersase Loses Contacts with the 3″ End of the Nascent RNA after Synthesis of a Tetranucleotide, **220**, 227–239.
Escherichia coli σ^{70} and NusA Proteins. I. Binding Interactions with Core RNA Polymerase in Solution and Within the Transcription Complex, **220**, 307–324.
Escherichia coli σ^{70} and NusA Proteins. II. Physical Properties and Self-association States, **220**, 325–333.
Factor-independent Activation of *Escherichia coli* rRNA Transcription. I. Kinetic Analysis of the Roles of the Upstream Activator Region and Supercoiling on Transcription of the *rrnB* P1 Promoter *in Vitro*, **220**, 555–568.
Factor-independent Activation of *Escherichia coli* rRNA Transcription. II. Characterization of Complexes of *rrnB* P1 Promoters Containing or Lacking the Upstream Activator Region with *Escherichia coli* RNA Polymerase, **220**, 569–583.
Escherichia coli Mutations That Block Transcription Termination by Phage HK022 Nun Protein, **220**, 613–619.
Functional Specialization within the α-Subunit of *Escherichia coli* RNA Polymerase, **221**, 23–29.
An *Escherichia coli rpoB* Mutation that Inhibits Transcription of Catabolite-sensitive Operons, **222**, 189–196.

RNA polymerase holoenzyme
Development of RNA Polymerase-Promoter Contacts during Open Complex Formation, **220**, 585–597.

RNA polymerase I
Structure of the Core Promoter of Human and Mouse Ribosomal RNA Gene. Asymmetry of Species-specific Transcription, **218**, 55–67.

RNA polymerase I promoter
rDNA Intergenic Region from *Arabidopsis thaliana*. Structural Analysis, Intraspecific Variation and Functional Implications, **221**, 1209–1222.

RNA polymerase II
Two-dimensional and Epitaxial Crystallization of a Mutant Form of Yeast RNA Polymerase II, **221**, 347–357.

RNA polymerase subunits
RNA–Protein Interactions in a Nus A-containing *Escherichia coli* Transcription Complex Paused at an RNA Hairpin, **219**, 11–25.

4·5 S RNA precursor
Kinetics of the Processing of the Precursor to 4·5 S RNA, a Naturally Occurring Substrate for RNase P from *Escherichia coli*, **221**, 1–5.

RNA processing
Higher-order Structure of the 5·8 S rRNA Sequence within the Yeast 35 S Precursor Ribosomal RNA Synthesized *in Vitro*, **217**, 649–659.
Conserved Amino Acid Residues Within and Outside of the N-terminal Ribonucleoprotein Motif of U1A Small Nuclear Ribonucleoprotein Involved in U1 RNA Binding, **219**, 577–584.

RNA pseudoknot
Mutational Analysis of the RNA Pseudoknot Component of a Coronavirus Ribosomal Frameshifting Signal, **220**, 889–902.

RNA recombination
Efficient Templates for Qβ Replicase are Formed by Recombination from Heterologous Sequences, **221**, 463–472.
On the Nature of Spontaneous RNA Synthesis by Qβ Replicase, **222**, 3–9.

RNA replication
Efficient Templates for Qβ Replicase are Formed by Recombination from Heterologous Sequences, **221**, 463–472.

RNA secondary structure
Decay of mRNA Encoding Ribosomal Protein S15 of *Escherichia coli* Is Initiated by an RNase E-dependent Endonucleolytic Cleavage that Removes the 3′ Stabilizing Stem and Loop Structure, **217**, 283–292.
Translation Initiation of IS*50*R Read-through Transcripts, **221**, 65–80.
Determination of an RNA Structure Involved in Splicing Inhibition of a Muscle-specific Exon, **221**, 837–856.
Secondary Structure as a Constraint on the Evolution of a Plant Viral Satellite RNA, **221**, 1065–1069.

RNA secondary structure snRNA–snRNA base-pairing
Spliceosomal Small Nuclear RNAs of *Tetrahymena thermophila* and Some Possible snRNA–snRNA Base-pairing Interactions, **222**, 219–232.

RNA splicing
Splice Site Selection and Role of the Lariat in a Group II Intron, **219**, 415–428.

RNA stem-loops
Complexes Formed by Complementary RNA Stem-loops. Their Formations, Structures and Interaction with ColE1 Rom Protein, **220**, 831–842.

RNA structure
Nuclear Magnetic Resonance Studies of the Hammerhead Ribozyme Domain. Secondary Structure Formation and Magnesium Ion Dependence, **217**, 113–124.
Higher-order Structure of the 5·8 S rRNA Sequence within the Yeast 35 S Precursor Ribosomal RNA Synthesized *in Vitro*, **217**, 649–659.
Structural Studies on Site-directed Mutants of Domain 3 of *Xenopus laevis* Oocyte 5 S Ribosomal RNA, **219**, 243–255.
Splice Site Selection and Role of the Lariat in a Group II Intron, **219**, 415–428.
Mutational Analysis of the RNA Pseudoknot Component of a Coronavirus Ribosomal Frameshifting Signal, **220**, 889–902.
Efficient Templates for Qβ Replicase are Formed by Recombination from Heterologous Sequences, **221**, 463–472.
Function of P11, a Tertiary Base Pairing in Self-splicing Introns of Subgroup IA, **221**, 1153–1164.

RNA transcription
DNA Looping Alters Local Conformation during Transcription, **219**, 615–622.

RNA viruses
The Signal for a Leaky UAG Stop Codon in Several Plant Viruses Includes the Two Downstream Codons, **218**, 365–373.

RNA-catalysis
Fate of the Junction Phosphate in Alternating Forward and Reverse Self-splicing Reactions of Group II Intron RNA, **222**, 145–154.

RNA-dependent RNA polymerase
Putative 65 kDa Protein of Beet Yellows Closterovirus Is a Homologue of HSP70 Heat Shock Proteins, **217**, 603–610.

RNA-protein complexes
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interactions with RNA. I. Cryoelectron Microscopic Studies, **221**, 1127–1138.

RNA–protein interaction
Conserved Amino Acid Residues Within and Outside of the N-terminal Ribonucleoprotein Motif of U1A Small Nuclear Ribonucleoprotein Involved in U1 RNA Binding, **219**, 577–584.

RNA–protein interactions
Interactions between Viral Coat Protein and a Specific Binding Region on Turnip Crinkle Virus RNA, **222**, 437–443.

RNA–protein recognition
Ribosomal RNA Identity Elements for Ricin A-chain Recognition and Catalysis, **221**, 193–207.

RNA–RNA interaction
Complexes Formed by Complementary RNA Stem-loops. Their Formations, Structures and Interaction with ColE1 Rom Protein, **220**, 831–842.

RNase H domain
Secondary Structure of the Ribonuclease H Domain of the Human Immunodeficiency Virus Reverse Transcriptase in Solution using Three-Dimensional Double and Triple Resonance Heteronuclear Magnetic Resonance Spectroscopy, **221**, 1081–1090.

RNase P
Sequence Changes in Both Flanking Sequences of a Pre-tRNA Influence the Cleavage Specificity of RNase P, **217**, 637–648.
Kinetics of the Processing of the Precursor to 4·5 S RNA, a Naturally Occurring Substrate for RNase P from *Escherichia coli*, **221**, 1–5.

RNaseIII
Functional and Structural Elements of the mRNA of the *cIII* Gene of Bacteriophage Lambda, **218**, 723–733.

Role of amino acid residue
Site-directed Mutagenesis in Haemoglobin. Functional Role of Tyrosine-42(C7)α at the α1–β2 Interface, **218**, 769–778.

Roll variation
Different Intrastrand and Interstrand Contributions to Stacking Account for Roll Variations at the Alternating Purine-Pyrimidine Sequences in *A*-DNA and *A*-RNA, **221**, 761–764.

Rotamer searching
Computational Method for the Design of Enzymes with Altered Substrate Specificity, **220**, 495–506.

Rotamers
Database Algorithm for Generating Protein Backbone and Side-chain Co-ordinates from a C^{α} Trace Application to Model Building and Detection of Co-ordinate Errors, **218**, 183–194.

Rotational symmetry
Direct Determination of Myosin Filament Symmetry in Scallop Striated Adductor Muscle by Rapid Freezing and Freeze Substitution, **220**, 125–132.

***rpoA* gene**

Identification of a Subunit Assembly Domain in the Alpha Subunit of *Escherichia coli* RNA Polymerase, **218**, 1–6.

Functional Specialization within the α-Subunit of *Escherichia coli* RNA Polymerase, **221**, 23–29.

rpoB

An *Escherichia coli rpoB* Mutation that Inhibits Transcription of Catabolite-sensitive Operons, **222**, 189–196.

rRNA

Structural Analysis of the Peptidyl Transferase Region in Ribosomal RNA of the Eukaryote *Xenopus laevis*, **217**, 93–112.

Ribosomal RNA Identity Elements for Ricin A-chain Recognition and Catalysis, **221**, 193–207.

5·8 S rRNA

Higher-order Structure of the 5·8 S rRNA Sequence within the Yeast 35 S Precursor Ribosomal RNA Synthesized *in Vitro*, **217**, 649–659.

5 S rRNA

Involvement of "Hinge" Nucleotides of *Xenopus laevis* 5 S rRNA in the RNA Structural Organization and in the Binding of Transcription Factor TFIIIA, **218**, 69–81.

Structural Studies on Site-directed Mutants of Domain 3 of *Xenopus laevis* Oocyte 5 S Ribosomal RNA, **219**, 243–255.

Crystallization and Preliminary Diffraction Studies of 5 S rRNA from the Thermophilic Bacterium *Thermus flavus*, **219**, 399–402.

rRNA evolution

Secondary Structure Constraints on the Evolution of *Drosophila* 28 S Ribosomal RNA Expansion Segments, **219**, 381–390.

5 S rRNA forms

Crystallization and Preliminary Diffraction Studies of 5 S rRNA from the Thermophilic Bacterium *Thermus flavus*, **219**, 399–402.

rRNA *N*-glycosidase

Escherichia coli Ribosome is Inactivated by Mirabilis Antiviral Protein which Cleaves the *N*-Glycosidic Bond at A2660 of 23 S Ribosomal RNA, **221**, 737–743.

rRNA promoter

Factor-independent Activation of *Escherichia coli* rRNA Transcription. I. Kinetic Analysis of the Roles of the Upstream Activator Region and Supercoiling on Transcription of the *rrnB* P1 Promoter *in Vitro*, **220**, 555–568.

Factor-independent Activation of *Escherichia coli* rRNA Transcription. II. Characterization of Complexes of *rrnB* P1 Promoters Containing or Lacking the Upstream Activator Region with *Escherichia coli* RNA Polymerase, **220**, 569–583.

Rubredoxin

Structure of Rubredoxin from *Desulfovibrio vulgaris* at 1·5 Å Resolution, **217**, 337–352.

S6

Crystals of Protein S6 from the 30 S Ribosomal Subunit of *Thermus thermophilus*, **220**, 549–550.

Saccharomyces cerevisiae

MRS3 and MRS4, Two Suppressors of mtRNA Splicing Defects in Yeast, are New Members of the Mitochondrial Carrier Family, **217**, 23–37.

Saccharomyces cerevisiae

rRNA Binding Domain of Yeast Ribosomal Protein L25. Identification of its Borders and a Key Leucine Residue, **218**, 375–385.

Salmon

Crystallization and Preliminary X-ray Crystallographic Studies of CO-hemoglobin from the North Atlantic Salmon (*Salmo salar*), **220**, 829–830.

Salt bridges

Surface Electrostatic Interactions Contribute Little to Stability of Barnase, **220**, 779–788.

Salt titration

Spectroscopic Studies on *λcro* Protein DNA Interactions, **219**, 733–746.

Satellite RNA

Secondary Structure as a Constraint on the Evolution of a Plant Viral Satellite RNA, **221**, 1065–1069.

Scallop

Direct Determination of Myosin Filament Symmetry in Scallop Striated Adductor Muscle by Rapid Freezing and Freeze Substitution, **220**, 125–132.

Scanning tunnelling microscopy

Structure of Immunoglobulin G by Scanning Tunnelling Microscopy, **221**, 361–365.

Secondary structure

Nuclear Magnetic Resonance Studies of the Hammerhead Ribozyme Domain. Secondary Structure Formation and Magnesium Ion Dependence, **217**, 113–124.

Protein Folding. Effect of Packing Density on Chain Conformation, **219**, 109–122.

Secondary Structure Constraints on the Evolution of *Drosophila* 28 S Ribosomal RNA Expansion Segments, **219**, 381–390.

Secondary Structure of Coliphage Qβ RNA. Analysis by Electron Microscopy, **221**, 557–570.

β-Breakers: An Aperiodic Secondary Structure, **221**, 603–613.

Analysis of Protein Main-chain Solvation as a Function of Secondary Structure, **221**, 669–691.

Relationship between Nuclear Magnetic Resonance Chemical Shift and Protein Secondary Structure, **222**, 311–333.

Secondary structures

Dynamic Monte Carlo Simulations of a New Lattice Model of Globular Protein Folding, Structure and Dynamics, **221**, 499–531.

Secretion

Analysis of the Membrane Organization of an *Escherichia coli* Protein Translocator, HlyB, a Member of a Large Family of Prokaryote and Eukaryote Surface Transport Proteins, **217**, 441–454.

Selection

Influences of Separation and Adjacent Sequences on the Use of Alternative 5′ Splice Sites, **217**, 265–281.

Selective enrichment

Systematic Evolution of Ligands by Exponential Enrichment with Integrated Optimization by Non-linear Analysis, **222**, 739–761.

Self assembly

Preparing Well-oriented Sols of Straight Bacterial Flagellar Filaments for X-ray Fiber Diffraction, **217**, 293–302.

Self-assembly

Monomers of the *Escherichia coli* SSB-1 Mutant Protein Bind Single-stranded DNA, **217**, 63–74.

Morphology of Sheet-like Assemblies of pN-collagen, pC-collagen and Procollagen Studied by Scanning Transmission Electron Microscopy Mass Measurements, **220**, 111–123.

Role of the Disordered Terminal Regions of Flagellin in Filament Formation and Stability, **221**, 1461–1474.

Self-association

Escherichia coli σ^{70} and NusA Proteins. II. Physical Properties and Self-association States, **220**, 325–333.

Self-avoiding random walks

Protein Folding. Effect of Packing Density on Chain Conformation, **219**, 109–122.

Self-splicing

Function of P11, a Tertiary Base Pairing in Self-splicing Introns of Subgroup IA, **221**, 1153–1164.

Sequence
Cloning, Sequence and Overexpression of NADH Peroxidase from *Streptococcus faecalis* 10C1. Structural Relationship with the Flavoprotein Disulfide Reductases, **221**, 857–871.

Sequence alignment
A Simple Method to Generate Non-trivial Alternate Alignments of Protein Sequences, **219**, 727–732.

Sequence alignments
A New Family of Powerful Multivariate Statistical Sequence Analysis Techniques, **220**, 877–887.

Sequence comparison
Amino Acid Substitution Matrices from an Information Theoretic Perspective, **219**, 555–565.

Sequence comparisons
Suboptimal Sequence Alignment in Molecular Biology. Alignment with Error Analysis, **221**, 403–419.

Sequence context
The Signal for a Leaky UAG Stop Codon in Several Plant Viruses Includes the Two Downstream Codons, **218**, 365–373.

Sequence evolution
Systematic Evolution of Ligands by Exponential Enrichment with Integrated Optimization by Non-linear Analysis, **222**, 739–761.

Sequence identity
Mitochondrial D-loop Sequences are Integrated in the Rat Nuclear Genome, **221**, 1223–1235.

Sequence motif
Evidence for an Ancestral Core Structure in Nucleotide-binding Proteins with the Type A Motif, **221**, 751–754.

Sequence motifs
Motif Recognition and Alignment for Many Sequences by Comparison of Dot-matrices, **218**, 33–43.

Sequence specificity
Mutations of a Conserved Residue within HIV-1 Ribonuclease H Affect Its Exo-and Endonuclease Activities, **220**, 801–818.

Sequence-dependent positioning
Can One Measure the Free Energy of Binding of the Histone Octamer to Different DNA Sequences by Salt-dependent Reconstitution?, **219**, 391–392.

Sequencing
Point Mutations that Lock *Salmonella typhimurium* Flagellar Filaments in the Straight Right-handed and Left-handed Forms and their Relation to Filament Superhelicity, **220**, 79–88.

Serine hydrolase
Refined Crystal Structures of "Aged" and "Non-aged" Organophosphoryl Conjugates of γ-Chymotrypsin, **221**, 909–918.

Serine protease
Crystallization and Preliminary X-ray Investigation of Factor D of Human Complement, **219**, 1–3.

Serine protease inhibitor
Expression of the Protease Inhibitor Ecotin and its Co-crystallization with Trypsin, **222**, 139–142.

Serine proteinase
Crystallization and Characterization of the High Molecular Weight Form of Nerve Growth Factor (7 S NGF), **219**, 595–601.

Serine Proteinase
Structure and Evolution of the Cytotoxic Cell Proteinase Genes CCP3, CCP4 and CCP5, **220**, 867–875.

Serine proteinase Inhibitor
Refined Crystal Structures of Subtilisin Novo in Complex with Wild-type and Two Mutant Eglins. Comparison with Other Serine Proteinase Inhibitor Complexes, **217**, 353–371.

Serine proteinase inhibitor
Refined X-ray Crystal Structures of the Reactive Site Modified Ovomucoid Inhibitor Third Domains from Silver Pheasant (OMSVP3*) and from Japanese Quail (OMJPQ3*), **220**, 739–755.
Refinement of the Three-dimensional Solution Structure of Barley Serine Proteinase Inhibitor 2 and Comparison with the Structures in Crystals, **222**, 621–635.

Serpin
Serpin Tertiary Structure Transformation, **221**, 615–621.

Serpins
Crystal Structure of Cleaved Human α_1-Antichymotrypsin at 2·7 Å Resolution and its Comparison with other Separins, **218**, 595–606.
Crystal Structure of Uncleaved Ovalbumin at 1·95 Å Resolution, **221**, 941–959.

Serratia marcescens
Crystallization and Preliminary Crystallographic Analysis of a Novel Nuclease from *Serratia marcescens*, **222**, 27–30.

SfrA
Regulation of the F Plasmid *tra Y* Promoter in *Escherichia coli* by Host and Plasmid Factors, **218**, 119–128.
Regulation of the F Plasmid *tra Y* Promoter in *Escherichia coli* K12 as a Function of Sequence Context, **220**, 271–279.

β-sheet
β-Breakers: An Aperiodic Secondary Structure, **221**, 603–613.
Evidence for an Ancestral Core Structure in Nucleotide-binding Proteins with the Type A Motif, **221**, 751–754.

Sheet-like macromolecular assemblies
Morphology of Sheet-like Assemblies of pN-collagen, pC-collagen and Procollagen Studied by Scanning Transmission Electron Microscopy Mass Measurements, **220**, 111–123.

Shiga-like Toxin-I
Crystallization of the B Chain of Shiga-like Toxin I from *Escherichia coli*, **218**, 691–694.

Shine and Dalgarno
Influence of mRNA Determinants on Translation Initiation in *Escherichia coli*, **218**, 83–97.
Detection of *Escherichia coli* Ribosome Binding at Translation Initiation Sites in the Absence of tRNA, **218**, 99–105.

Short consensus repeat
Three-dimensional Structure of a Complement Control Protein Module in Solution, **219**, 717–725.

Short interspersed repeats
Sequence and Comparative Analysis of the Rabbit α-Like Globin Gene Cluster Reveals a Rapid Mode of Evolution in a G + C-rich Region of Mammalian Genomes, **222**, 233–249.

Shuttle vector
Mutation Spectrum Following Transfection of Ultraviolet-irradiated Single-stranded or Double-stranded Shuttle Vector DNA into Monkey Cells, **218**, 667–673.

Side-chain clusters
Side-chain Clusters in Protein Structures and Their Role in Protein Folding, **220**, 151–171.

Side-chain conformation
Prediction of Protein Side-chain Conformation by Packing Optimization, **217**, 373–388.

Side-polar
Scanning Transmission Electron Microscopic Mass Determination of *in Vitro* Self-assembled Smooth Muscle Myosin Filaments, **222**, 455–458.

Sigma
Sigma Subunit of *Escherichia coli* RNA Polymersase Loses Contacts with the 3″ End of the Nascent RNA after Synthesis of a Tetranucleotide, **220**, 227–239.

Sigma factor
Spatial Arrangement of σ-Factor and Core Enzyme of *Escherichia coli* RNA Polymerase. A Neutron Solution Scattering Study, **219**, 747–755.
Escherichia coli σ^{70} and NusA Proteins. I. Binding Interactions with Core RNA Polymerase in Solution and Within the Transcription Complex, **220**, 307–324.

Escherichia coli σ^{70} and NusA Proteins. II. Physical Properties and Self-association States, **220**, 325–333.
Sporulation Operon *spoIVF* and the Characterization of Mutations that Uncouple Mother-cell from Forespore Gene Expression in *Bacillus subtilis*, **221**, 1237–1256.

Signal transduction
EnvZ Controls the Concentration of Phosphorylated OmpR to Mediate Osmoregulation of the Porin Genes, **222**, 567–580.

Signature sequence
Lysine 335, Part of the KMSKS Signature Sequence, Plays a Crucial Role in the Amino Acid Activation Catalysed by the Methionyl-tRNA Synthetase from *Escherichia coli*, **217**, 465–475.

Simian virus 40
Distribution of Topoisomerase II Cleavage Sites in Simian Virus 40 DNA and the Effects of Drugs, **222**, 909–924.

Simulated annealing
Prediction of Protein Side-chain Conformation by Packing Optimization, **217**, 373–388.

Simulated annealing refinement
Structure of Cyclodextrin Glycosyltransferase Refined at 2·0 Å Resolution, **217**, 737–750.

Simulation
Real-time Interactive Frequency Filtering of Molecular Dynamics Trajectories, **220**, 1–4.

Single amino acid substitutions
Systematic Mutation of Bacteriophage T4 Lysozyme, **222**, 67–87.

Single cysteine mutants
Fluorescence Energy Transfer Distance Measurements Using Site-directed Single Cysteine Mutants. The Membrane Insertion of Colicin A, **218**, 639–653.

Single-stranded DNA
Mutation Spectrum Following Transfection of Ultraviolet-irradiated Single-stranded or Double-stranded Shuttle Vector DNA into Monkey Cells, **218**, 667–673.

Single-stranded DNA binding protein
The Effects on Strand Exchange of 5′ *Versus* 3′ Ends of Single-stranded DNA in RecA Nucleoprotein Filaments, **219**, 645–654.

Single-stranded nucleic acid binding proteins
Physical Studies of Tyrosine and Tryptophan Residues in Mammalian A1 Heterogeneous Nuclear Ribonucleoprotein. Support for a Segmented Structure, **221**, 693–709.

Singlet–singlet energy transfer
Spatial Organization of Template Polynucleotides on the Ribosome Determined by Fluorescence Methods, **221**, 441–453.

Site-directed mutagenesis
Lysine 335, Part of the KMSKS Signature Sequence, Plays a Crucial Role in the Amino Acid Activation Catalysed by the Methionyl-tRNA Synthetase from *Escherichia coli*, **217**, 465–475.
Suggestions for "Safe" Residue Substitutions in Site-directed Mutagenesis, **217**, 721–729.
Carboxy-terminal Phenylalanine is Essential for the Correct Assembly of a Bacterial Outer Membrane Protein, **218**, 141–148.
Functional Role of the Distal Valine (E11) Residue of α Subunits in Human Haemoglobin, **218**, 761–767.
Site-directed Mutagenesis in Haemoglobin. Functional Role of Tyrosine-42(C7)α at the α1–β2 Interface, **218**, 769–778.
Control Regions of an Archaeal Gene. A TATA Box and an Initiator Element Promote Cell-free Transcription of the $tRNA^{Val}$ Gene of *Methanococcus vannielii*, **222**, 495–508.

Site-specific integration
Analysis of the Integration Function of the Streptomycete Bacteriophage φC31, **222**, 897–908.

Site-specific recombination
Behavior of a Cross-linked Attachment Site: Testing the Role of Branch Migration in Site-specific Recombination, **220**, 621–629.

Smooth muscle
Regulation of Smooth Muscle Myosin Light Chain Kinase. Allosteric Effects and Co-operative Activation by Calmodulin, **220**, 947–957.

Soft docking
"Soft Docking": Matching of Molecular Surface Cubes, **219**, 79–102.

Solid state n.m.r.
Experimental Determination of Torsion Angles in the Polypeptide Backbone of the Gramicidin A Channel by Solid State Nuclear Magnetic Resonance, **218**, 607–619.

Solid-state n.m.r.
Solid-state Nuclear Magnetic Resonance Derived Model for Dynamics in the Polypeptide Backbone of the Gramicidin A Channel, **218**, 621–637.

Solution n.m.r. structure
Comparison of the Solution Nuclear Magnetic Resonance and Crystal Structures of Interleukin-8. Possible Implications for the Mechanism of Receptor Binding, **217**, 611–620.

Solution scattering
Solution Structure of Human and Mouse Immunoglobulin M by Synchrotron X-ray Scattering and Molecular Graphics Modelling. A Possible Mechanism for Complement Activation, **221**, 1345–1366.

Solution secondary structure
Secondary Structure of the Ribonuclease H Domain of the Human Immunodeficiency Virus Reverse Transcriptase in Solution using Three-Dimensional Double and Triple Resonance Heteronuclear Magnetic Resonance Spectroscopy, **221**, 1081–1090.

Solution structure
Proton Nuclear Magnetic Resonance Study of the B9(Asp) Mutant of Human Insulin. Sequential Assignment and Secondary Structure, **218**, 221–231.
Determination of the Positions of Bound Water Molecules in the Solution Structure of Reduced Human Thioredoxin by Heteronuclear Three-dimensional Nuclear Magnetic Resonance Spectroscopy, **220**, 209–216.
Comparison of the Solution Nuclear Magnetic Resonance and X-ray Crystal Structures of Human Recombinant Interleukin-1β, **221**, 47–53.

Solvation energy
Computational Method for the Design of Enzymes with Altered Substrate Specificity, **220**, 495–506.

Soybean trypsin inhibitor family
Crystal Structure of a Kunitz-type Trypsin Inhibitor from *Erythrina caffra* Seeds, **217**, 153–176.

Spacer heterogeneity
rDNA Intergenic Region from *Arabidopsis thaliana*. Structural Analysis, Intraspecific Variation and Functional Implications, **221**, 1209–1222.

Spacers
Six Group I Introns and Three Internal Transcribed Spacers in the Chloroplast Large Subunit Ribosomal RNA Gene of the Green Alga *Chlamydomonas eugametos*, **218**, 293–311.

Species specificity
Structure of the Core Promoter of Human and Mouse Ribosomal RNA Gene. Asymmetry of Species-specific Transcription, **218**, 55–67.

Specific binding
Binding of the Anticodon Domain of $tRNA_f^{Met}$ to *Escherichia coli* Methionyl-tRNA Synthetase, **220**, 205–208.

Specificity
Crystallographic Analysis of Trypsin-G226A. A Specificity Pocket Mutant of Rat Trypsin with Altered Binding and Catalysis, **219**, 525–532.

An Axial Binding Site in the *Tetrahymena* Precursor RNA, **222**, 995–1012.

Specificity change
Refined Crystal Structures of Subtilisin Novo in Complex with Wild-type and Two Mutant Eglins. Comparison with Other Serine Proteinase Inhibitor Complexes, **217**, 353–371.

Specimen preparation
High-resolution Electron Crystallography of Light-harvesting Chlorophyll *a/b*-Protein Complex in Three Different Media, **217**, 691–699.

^{1}H spectral assignment
Proton Nuclear Magnetic Resonance Study of the B9(Asp) Mutant of Human Insulin. Sequential Assignment and Secondary Structure, **218**, 221–231.

Sperm whale myoglobin
X-ray Crystal Structure of the Ferric Sperm Whale Myoglobin : Imidazole Complex at 2·0 Å Resolution, **217**, 409–412.

Spermine
Molecular Structure of a Complete Turn of *A*-DNA, **221**, 623–635.

Spermine mobility
^{1}H and ^{31}P Nuclear Magnetic Resonance Studies of Spermine Binding to the Z-DNA form of $d(m^5CGm^5CGm^5CG)_2$. Evidence for Decreased Spermine Mobility, **219**, 585–590.

Spliceosomal snRNAs
Spliceosomal Small Nuclear RNAs of *Tetrahymena thermophila* and Some Possible snRNA snRNA Base-pairing Interactions, **222**, 219–232.

Splicing
Influences of Separation and Adjacent Sequences on the Use of Alternative 5′ Splice Sites, **217**, 265–281.

Splicing specificity
Splice Site Selection and Role of the Lariat in a Group II Intron, **219**, 415–428.

***trans*-splicing**
Restoration of the Self-splicing Activity of a Defective Group II Intron by a Small *Trans*-acting RNA, **222**, 179–187.

Spontaneous RNA synthesis
Efficient Templates for Qβ Replicase are Formed by Recombination from Heterologous Sequences, **221**, 463–472.
On the Nature of Spontaneous RNA Synthesis by Qβ Replicase, **222**, 3–9.

Sporulation
Sporulation Operon *spoIVF* and the Characterization of Mutations that Uncouple Mother-cell from Forespore Gene Expression in *Bacillus subtilis*, **221**, 1237–1256.

SSB
Monomers of the *Escherichia coli* SSB-1 Mutant Protein Bind Single-stranded DNA, **217**, 63–74.

SSI
Refined Crystal Structure of the Complex of Subtilisin BPN′ and *Streptomyces* Subtilisin Inhibitor at 1·8 Å Resolution, **221**, 309–325.

Stability
Relation Between Stability, Dynamics and Enzyme Activity in 3-Phosphoglycerate Kinases from Yeast and *Thermus thermophilus*, **220**, 531–538.
Mapping Transition States of Protein Unfolding by Protein Engineering of Ligand-binding Sites, **221**, 1007–1014.

Staphylococcal nuclease
In a Staphylococcal Nuclease Mutant the Side-chain of a Lysine Replacing Valine 66 is Fully Buried in the Hydrophobic Core, **221**, 7–14.

Staphylococcus aureus
The *Staphylococcus aureus* Mutation *pcrA3* Leads to the Accumulation of pT181 Replication Initiation Complexes, **221**, 1183–1189.

Starvation
Molecular and Functional Characterization of a Carbon Starvation Gene of *Escherichia coli*, **218**, 129–140.

Statistical significance
Amino Acid Substitution Matrices from an Information Theoretic Perspective, **219**, 555–565.

Stellacyanin
Three-dimensional Model for Stellacyanin, a "Blue" Copper-protein, **222**, 1053–1065.

STEM
Scanning Transmission Electron Microscopic Mass Determination of *in Vitro* Self-assembled Smooth Muscle Myosin Filaments, **222**, 455–458.

STEM mass measurements
Morphology of Sheet-like Assemblies of pN-collagen, pC-collagen and Procollagen Studied by Scanning Transmission Electron Microscopy Mass Measurements, **220**, 111–123.

Stem–loop
mRNA Degradation by Processive 3′–5′ Exoribonucleases *in Vitro* and the Implications for Prokaryotic mRNA Decay *in Vivo*, **221**, 81–95.

Stereochemical analysis
Molecular Packing in Type I Collagen Fibrils. A Model with Neighbouring Collagen Molecules Aligned in Axial Register, **218**, 815–823.

Stereospecific assignments
Efficient Computation of Three-dimensional Protein Structures in Solution from Nuclear Magnetic Resonance Data Using the Program DIANA and the Supporting Programs CALIBA, HABAS and GLOMSA, **217**, 517–530.

Steroid enzyme
Crystal Structure of Cholesterol Oxidase from *Brevibacterium sterolicum* Refined at 1·8 Å Resolution, **219**, 533–554.

Steroid induction
Co-operative Binding of the Glucocorticoid Receptor DNA Binding Domain is One of at Least Two Mechanisms for Synergism, **222**, 155–165.

STM
Structure of Immunoglobulin G by Scanning Tunnelling Microscopy, **221**, 361–365.

Stoichiometry
Crystals of the Complex between Human Growth Hormone and the Extracellular Domain of Its Receptor, **222**, 865–868.

Stop codon readthrough
The Signal for a Leaky UAG Stop Codon in Several Plant Viruses Includes the Two Downstream Codons, **218**, 365–373.

Stopped-flow
Kinetic Analysis of the Acid and the Alkaline Unfolded States of Staphylococcal Nuclease, **220**, 771–778.

Strand exchange
The Effects on Strand Exchange of 5′ *Versus* 3′ Ends of Single-stranded DNA in RecA Nucleoprotein Filaments, **219**, 645–654.

Strand specificity
Sequence Requirements for Protein-primed DNA Replication of Bacteriophage PRD1, **218**, 779–789.

***Streptococcus faecalis* 10C1**
Cloning, Sequence and Overexpression of NADH Peroxidase from *Streptococcus faecalis* 10C1. Structural Relationship with the Flavoprotein Disulfide Reductases, **221**, 857–871.
Structure of NADH Peroxidase from *Streptococcus faecalis* 10C1 Refined at 2·16 Å Resolution, **221**, 1325–1344.

Streptomyces aureofaciens
Crystallization and Preliminary X-ray Data of Bromoperoxidase from *Streptomyces aureofaciens* ATCC 10762, **221**, 35–37.

Streptomycete
Analysis of the Integration Function of the Streptomycete Bacteriophage ϕC31, **222**, 897–908.

Stress response
Characterization and Sequence of the *Escherichia coli* Stress-induced *psp* Operon, **220**, 35–48.

Stringent Response
The Stringent Response Blocks DNA Replication Outside the *ori* Region in *Bacillus subtilis* and at the Origin in *Escherichia coli*, **219**, 605–613.

Structural form
The Observed Form of Coated Vesicles and a Mathematical Covering Problem, **218**, 485–488.

Structural model
Molecular Packing in Type I Collagen Fibrils. A Model with Neighbouring Collagen Molecules Aligned in Axial Register, **218**, 815–823.

Structure
Human Rhinovirus 14 Complexed with Antiviral Compound R 61837, **217**, 455–463.

structure
Isolation, Crystallization, Crystal Structure Analysis and Refinement of Constitutive C-phycocyanin from the Chromatically Adapting Cyanobacterium *Fremyella diplosiphon* at 1·66 Å Resolution, **217**, 577–592.

Structure
Involvement of "Hinge" Nucleotides of *Xenopus laevis* 5 S rRNA in the RNA Structural Organization and in the Binding of Transcription Factor TFIIIA, **218**, 69–81.
Analysis of Structural Design Features in Collagen, **218**, 209–219.
Influence of Proline Residues on Protein Conformation, **218**, 397–412.
Preliminary X-ray Crystallographic Analysis of a Modified Basic Fibroblast Growth Factor, **218**, 493–494.
Structures of Deoxy and Oxy Hemerythrin at 2·0 Å Resolution, **218**, 583–593.
Crystallographic Analysis of Trypsin-G226A. A Specificity Pocket Mutant of Rat Trypsin with Altered Binding and Catalysis, **219**, 525–532.
Three-dimensional Structure of a Complement Control Protein Module in Solution, **219**, 717–725.
Order Disorder Phenomena in Myelinated Nerve Sheaths. III. The Structure of Myelin in Rat Optic Nerves over the Course of Myelinogenesis, **220**, 351–357.
Structures of Met and Azidomet Hemerythrin at 1·66 Å Resolution, **220**, 723–737.
Serpin Tertiary Structure Transformation, **221**, 615–621.
Crystallization and Preliminary Crystallographic Analysis of a Novel Nuclease from *Serratia marcescens*, **222**, 27–30.

3-dimensional structure
Analysis of Symmetry and Three-dimensional Reconstruction of Thin gp32*I Crystals, **217**, 551–562.

Structure determination technique development
Experimental Determination of Torsion Angles in the Polypeptide Backbone of the Gramicidin A Channel by Solid State Nuclear Magnetic Resonance, **218**, 607–619.

Structure evaluation
Database Algorithm for Generating Protein Backbone and Side-chain Co-ordinates from a C^{α} Trace Application to Model Building and Detection of Co-ordinate Errors, **218**, 183–194.

Structure prediction
Prediction of Protein Side-chain Conformation by Packing Optimization, **217**, 373–388.
A New Family of Powerful Multivariate Statistical Sequence Analysis Techniques, **220**, 877–887.
Protein Docking and Complementarity, **221**, 327–346.

Structure refinement
Efficient Computation of Three-dimensional Protein Structures in Solution from Nuclear Magnetic Resonance Data Using the Program DIANA and the Supporting Programs CALIBA, HABAS and GLOMSA, **217**, 517–530.
Structure Determination of the *Antp(C39 → S)* Homeodomain from Nuclear Magnetic Resonance Data in Solution using a Novel Strategy for the Structure Calculation with the Programs DIANA, CALIBA, HABAS and GLOMSA, **217**, 531–540.

β-structure
A Nuclear Magnetic Resonance Study of the Hydrogen-Exchange Behaviour of Lysozyme in Crystals and Solution, **218**, 413–426.

Structure–function studies
Two Mutations of Phage Mu Transposase that Affect Strand Transfer or Interactions with B Protein Lie in Distinct Polypeptide Domains, **219**, 189–199.

Structure-prediction
Prediction of Protein Backbone Conformation Based on Seven Structure Assignments. Influence of Local Interactions, **221**, 961–979.

STS
Mapping Using Unique Sequences, **217**, 259–264.

Subfamilies
Composite of A and F-type 5′ Terminal Sequences Defines a Subfamily of Mouse LINE-1 Elements, **221**, 367–373.

Suboptimal paths
A Simple Method to Generate Non-trivial Alternate Alignments of Protein Sequences, **219**, 727–732.

Substrate binding
The Refined Structure of the Complex between Adenylate Kinase from Beef Heart Mitochondrial Matrix and its Substrate AMP at 1·85 Å Resolution, **217**, 541–549.

Subtilisin
Refined Crystal Structures of Subtilisin Novo in Complex with Wild-type and Two Mutant Eglins. Comparison with Other Serine Proteinase Inhibitor Complexes, **217**, 353–371.
Refined Crystal Structure of the Complex of Subtilisin BPN′ and *Streptomyces* Subtilisin Inhibitor at 1·8 Å Resolution, **221**, 309–325.

Subunit assembly
Identification of a Subunit Assembly Domain in the Alpha Subunit of *Escherichia coli* RNA Polymerase, **218**, 1–6.

Subunit association
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interactions with RNA. II. Physical Chemical Studies, **221**, 1139–1151.

Sugar phosphotransferase system
Crystallization and Preliminary X-ray Analysis of the Lactose-specific Phosphocarrier Protein IIA^{lac} of the Phosphoenolpyruvate : Sugar Phosphotransferase System from *Staphylococcus aureus*, **222**, 857–859.

Sugar transport
Crystallization of the IIA Domain of the Glucose Permease of *Bacillus subtilis*, **221**, 1079–1080.

Suicide DNA substrate
New Technique for Uncoupling the Cleavage and Religation Reactions of Eukaryotic Topoisomerase I. The Mode of Action of Camptothecin at a Specific Recognition Site, **222**, 669–678.

Sulfhydryl, protease
Crystal Structure of Rat Trypsin-S195C at −150°C. Analysis of Low Activity of Recombinant and Semisynthetic Thiol Proteases, **219**, 511–523.

***SUP4*-o**
Mutational Specificity of DNA Precursor Pool Imbalances in Yeast Arising from Deoxycytidylate Deaminase Deficiency or Treatment with Thymidylate, **220**, 933–946.

Supercoiled DNA
Synthetic DNA Bending Sequences Increase the Rate of *in Vitro* Transcription Initiation at the *Escherichia coli lac* Promoter, **219**, 217–230.

Supercoiling
Computer Simulation of DNA Supercoiling, **217**, 413–419.
Factor-independent Activation of *Escherichia coli* rRNA Transcription. I. Kinetic Analysis of the Roles of the Upstream Activator Region and Supercoiling on Transcription of the *rrnB* P1 Promoter *in Vitro*, **220**, 555–568.

Superhelicity
Computer Simulation of DNA Supercoiling, **217**, 413–419.

Superoxide
Manganese Superoxide Dismutase from *Thermus thermophilus*. A Structural Model Refined at 1·8 Å Resolution, **219**, 335–358.

Superoxide dismutase
Manganese Superoxide Dismutase from *Thermus thermophilus*. A Structural Model Refined at 1·8 Å Resolution, **219**, 335–358.

Suppression
tRNA Anticodons with the Modified Nucleoside 2-Methylthio-N^6-(4-hydroxyisopentenyl)adenosine Distinguish Between Bases 3′ of the Codon, **218**, 509–516.

Surface area
Is the Hydrophobic Effect Stabilizing or Destabilizing in Proteins? The Contribution of Disulphide Bonds to Protein Stability, **217**, 389–398.

Surface loops
Analysis of Protein Loop Closure. Two Types of Hinges Produce One Motion in Lactate Dehydrogenase, **220**, 133–149.

Surface protein
Cysteine Residue Periodicity is a Conserved Structural Feature of Variable Surface Proteins from *Paramecium tetraurelia*, **222**, 835–841.

Swelling
Order–Disorder Phenomena in Myelinated Nerve Sheaths. III. The Structure of Myelin in Rat Optic Nerves over the Course of Myelinogenesis, **220**, 351–357.

Switchable protein
A Molecular Switch: Subunit Rotations Involved in the Right-handed to Left-handed Transitions of *Salmonella typhimurium* Flagellar Filaments, **220**, 67–77.

Switchable proteins
Point Mutations that Lock *Salmonella typhimurium* Flagellar Filaments in the Straight Right-handed and Left-handed Forms and their Relation to Filament Superhelicity, **220**, 79–88.

Synchrotron
Structure of Bovine Prothrombin Fragment 1 Refined at 2·25 Å Resolution, **220**, 481–494.

Synchrotron radiation
Crystallization and Preliminary X-ray Study of a Double-Shelled Spherical Virus, Rice Dwarf Virus, **219**, 665–669.

Synergism
Co-operative Binding of the Glucocorticoid Receptor DNA Binding Domain is One of at Least Two Mechanisms for Synergism, **222**, 155–165.

Synthetic peptides
Aggregation and Secondary Structure of Synthetic Amyloid βA4 Peptides of Alzheimer's Disease, **218**, 149–163.

Synthetic RNA
Sequence Changes in Both Flanking Sequences of a Pre-tRNA Influence the Cleavage Specificity of RNase P, **217**, 637–648.

T7 autogene
Creation of a T7 Autogene. Cloning and Expression of the Gene for Bacteriophage T7 RNA Polymerase under Control of Its Cognate Promoter, **219**, 61–68.

T7 expression system
Use of Bacteriophage T7 Lysozyme to Improve an Inducible T7 Expression System, **219**, 37–44.
Controlling Basal Expression in an Inducible T7 Expression System by Blocking the Target T7 Promoter with *lac* Repressor, **219**, 45–59.

T7 lysozyme
Use of Bacteriophage T7 Lysozyme to Improve an Inducible T7 Expression System, **219**, 37–44.
Creation of a T7 Autogene. Cloning and Expression of the Gene for Bacteriophage T7 RNA Polymerase under Control of Its Cognate Promoter, **219**, 61–68.

T7 promoters
Controlling Basal Expression in an Inducible T7 Expression System by Blocking the Target T7 Promoter with *lac* Repressor, **219**, 45–59.

T7 RNA polymerase
Use of Bacteriophage T7 Lysozyme to Improve an Inducible T7 Expression System, **219**, 37–44.
Controlling Basal Expression in an Inducible T7 Expression System by Blocking the Target T7 Promoter with *lac* Repressor, **219**, 45–59.
Creation of a T7 Autogene. Cloning and Expression of the Gene for Bacteriophage T7 RNA Polymerase under Control of Its Cognate Promoter, **219**, 61–68.
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. I. Characterization of Elongation Complexes, **221**, 1091–1110.
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. II. Stability and Some Properties of Elongation Complexes, **221**, 1111–1125.

Tac promoter
Expression of the Protease Inhibitor Ecotin and its Co-crystallization with Trypsin, **222**, 139–142.

TATA box
Control Regions of an Archaeal Gene. A TATA Box and an Initiator Element Promote Cell-free Transcription of the $tRNA^{Val}$ Gene of *Methanococcus vannielii*, **222**, 495–508.

Tdd-3
Transfer RNA Genes from *Dictyostelium discoideum* are Frequently Associated with Repetitive Elements and Contain Consensus Boxes in their 5′-and 3′-Flanking Regions, **222**, 537–552.

Telokin
Crystallization and Preliminary Analysis of Telokin, the C-Terminal Domain of Myosin Light Chain Kinase, **217**, 621–623.

Temperature
Crystal Structure of Rat Trypsin-S195C at − 150°C. Analysis of Low Activity of Recombinant and Semisynthetic Thiol Proteases, **219**, 511-523.

Temperature-sensitive mutant
Functional and Structural Effects of an Ala to Val Mutation in the Adenovirus Serotype 2 Fibre, **217**, 477–486.

Temperature-sensitive mutants
Temperature-sensitive Variants of *Saccharomyces cerevisiae* Iso-1-cytochrome *c* Produced by Random Mutagenesis of Codons 43 to 54, **221**, 97–105.

terC
Normal *terC*-Region of the *Bacillus subtilis* Chromosome Acts in a Polar Manner to Arrest the Clockwise Replication Fork, **222**, 197–207.

Terminal repeats
In Vitro Rescue of an Integrated Hybrid Adeno-associated Virus/Simian Virus 40 Genome, **218**, 791–804.

Termination
Normal *terC*-Region of the *Bacillus subtilis* Chromosome Acts in a Polar Manner to Arrest the Clockwise Replication Fork, **222**, 197–207.

Terminus relocation
Normal *terC*-Region of the *Bacillus subtilis* Chromosome Acts in a Polar Manner to Arrest the Clockwise Replication Fork, **222**, 197–207.

Tertiary structure
Activity and Specificity of Human Aldolases, **219**, 573–576.

Tetrahydrobiopterin dependent hydroxylases
Crystallization and Preliminary X-ray Analysis of Phenylalanine Hydroxylase from Rat Liver, **218**, 495–498.

Tetrahymena thermophila
Spliceosomal Small Nuclear RNAs of *Tetrahymena thermophila* and Some Possible snRNA–snRNA Base-pairing Interactions, **222**, 219–232.

Tetramer
Manganese Superoxide Dismutase from *Thermus thermophilus*. A Structural Model Refined at 1·8 Å Resolution, **219**, 335–358.

TFID
Structure of the Core Promoter of Human and Mouse Ribosomal RNA Gene. Asymmetry of Species-specific Transcription, **218**, 55–67.

TFIIIA
Involvement of "Hinge" Nucleotides of *Xenopus laevis* 5 S rRNA in the RNA Structural Organization and in the Binding of Transcription Factor TFIIIA, **218**, 69–81.

Theory of motion through gels
A Study of Electrophoretic Mobility of DNA in Agarose and Polyacrylamide Gels, **221**, 981–1005.

Thermal stability
Molecular Characterization of Cuticle and Interstitial Collagens from Worms Collected at Deep Sea Hydrothermal Vents, **221**, 209–223.
Preliminary X-ray Diffraction Analysis of a Crystallizable Mutant of Malate Dehydrogenase from the Thermophile *Thermus flavus*, **221**, 383–385.

Thermodynamics
Molecular Basis of Co-operativity in Protein Folding, **222**, 687–698.

Thermophilic proteins
Relation Between Stability, Dynamics and Enzyme Activity in 3-Phosphoglycerate Kinases from Yeast and *Thermus thermophilus*, **220**, 531–538.

Thermostability
Isolation and *in Vitro* Characterization of Temperature-sensitive Mutants of the Bacteriophage f1 Gene V Protein, **219**, 257–275.

Thermostable enzyme
Three-dimensional Structure of a Highly Thermostable Enzyme, 3-Isopropylmalate Dehydrogenase of *Thermus thermophilus* at 2·2 Å Resolution, **222**, 725–738.

Thermus flavus
Crystallization and Preliminary Diffraction Studies of 5 S rRNA from the Thermophilic Bacterium *Thermus flavus*, **219**, 399–402.

Thermus thermophilus
Crystals of Protein S6 from the 30 S Ribosomal Subunit of *Thermus thermophilus*, **220**, 549–550.
Crystals of Intact Elongation Factor Tu from *Thermus thermophilus* Diffracting to High Resolution, **221**, 375–377.

Thioester
Identification of the Acyl Transfer Site of Fatty Acyl-protein Synthetase from Bioluminescent Bacteria, **219**, 69–77.

Thioredoxin
Crystallization and Preliminary X-ray Diffraction Studies of the Spinach-chloroplast Thioredoxin f, **222**, 459–461.
Construction of New Ligand Binding Sites in Proteins of Known Structure. I. Computer-aided Modeling of Sites with Pre-defined Geometry, **222**, 763–785.
Construction of New Ligand Binding Sites in Proteins of Known Structure. II. Grafting of a Buried Transition Metal Binding Site into *Escherichia coli* Thioredoxin, **222**, 787–803.

Thiostrepton
Recognition of the Highly Conserved GTPase Center of 23 S Ribosomal RNA by Ribosomal Protein L11 and the Antibiotic Thiostrepton, **221**, 1257–1268.

Three-dimensional structure
Refinement of the Three-dimensional Solution Structure of Barley Serine Proteinase Inhibitor 2 and Comparison with the Structures in Crystals, **222**, 621–635.
Three-dimensional Structure of a Highly Thermostable Enzyme, 3-Isopropylmalate Dehydrogenase of *Thermus thermophilus* at 2·2 Å Resolution, **222**, 725–738.

Three-iron
Refined Crystal Structure of Ferredoxin II from *Desulfovibrio gigas* at 1·7 Å, **219**, 693–715.

Threonine
Molecular Characterization of Cuticle and Interstitial Collagens from Worms Collected at Deep Sea Hydrothermal Vents, **221**, 209–223.

Thrombin
Refined Structure of the Hirudin–Thrombin Complex, **221**, 583–601.

α-thrombin
Structure of the Hirugen and Hirulog 1 Complexes of α-Thrombin, **221**, 1379–1393.

Thrombin complexes
Structure of the Hirugen and Hirulog 1 Complexes of α-Thrombin, **221**, 1379–1393.

Thymidylate synthase
Crystallization of Human Thymidylate Synthase, **219**, 161–163.
Mutational Specificity of DNA Precursor Pool Imbalances in Yeast Arising from Deoxycytidylate Deaminase Deficiency or Treatment with Thymidylate, **220**, 933–946.

TIM-barrel
Refined 1·83 Å Structure of Trypanosomal Triosephosphate Isomerase Crystallized in the Presence of 2·4 M-Ammonium Sulphate. A Comparison with the Structure of the Trypanosomal Triosephosphate Isomerase–Glycerol-3-phosphate Complex, **220**, 995–1015.

Time-resolved cryo-electron microscopy
Time-resolved Cryo-electron microscopic Study of the Dissociation of Actomyosin Induced by Photolysis of Photolabile Nucleotides, **219**, 139–143.

Tissue plasminogen activator
Crystal Structure of a Kunitz-type Trypsin Inhibitor from *Erythrina caffra* Seeds, **217**, 153–176.

Tissue plasminogen activator kringle
Solution Structure of the Tissue-type Plasminogen Activator Kringle 2 Domain Complexed to 6-Aminohexanoic Acid an Antifibrinolytic Drug, **222**, 1035–1051.

Tn*3*
Mutations in the Inverted Repeats of Tn*3* Affect Binding of Transposase and Transposition Immunity, **218**, 335–347.

Tobacco mosaic virus
The Signal for a Leaky UAG Stop Codon in Several Plant Viruses Includes the Two Downstream Codons, **218**, 365–373.

Toeprinting
Influence of mRNA Determinants on Translation Initiation in *Escherichia coli*, **218**, 83–97.
Detection of *Escherichia coli* Ribosome Binding at Translation Initiation Sites in the Absence of tRNA, **218**, 99–105.

Tol proteins
Individual Domains of Colicins Confer Specificity in Colicin Uptake, in Pore-properties and in Immunity Requirement, **217**, 429–439.

Topoisomerase
Reiterated Gene Amplifications at Specific Short Homology Sequences in Phage T4 Produce Hp17 Mutants, **218**, 705–721.

Topoisomerase II
Drosophila Topoisomerase II–DNA Interactions are Affected by DNA Structure, **217**, 53–62.
Distribution of Topoisomerase II Cleavage Sites in Simian Virus 40 DNA and the Effects of Drugs, **222**, 909–924.

Topoisomerase inhibitors
Distribution of Topoisomerase II Cleavage Sites in Simian Virus 40 DNA and the Effects of Drugs, **222**, 909–924.

Torsional rigidity
Angular Disorder in Actin: Is It Consistent with General Principles of Protein Structure?, **217**, 405–408.

Toxic target genes
Use of Bacteriophage T7 Lysozyme to Improve an Inducible T7 Expression System, **219**, 37–44.
Controlling Basal Expression in an Inducible T7 Expression System by Blocking the Target T7 Promoter with *lac* Repressor, **219**, 45–59.

Toxoplasma gondii
Mitochondrial-like DNA Sequences Flanked by Direct and Inverted Repeats in the Nuclear Genome of *Toxoplasma gondii*, **222**, 525–536.

TraJ
Regulation of the F Plasmid *traY* Promoter in *Escherichia coli* by Host and Plasmid Factors, **218**, 119–128.
Regulation of the F Plasmid *traY* Promoter in *Escherichia coli* K12 as a Function of Sequence Context, **220**, 271–279.

Trajectory
Real-time Interactive Frequency Filtering of Molecular Dynamics Trajectories, **220**, 1–4.

Trans-acting factors
Identification of *Cis* and *Trans*-elements Involved in the Timed Control of a *Caulobacter* Flagellar Gene, **217**, 247–257.

Transamination
Crystallization and Preliminary X-ray Diffraction Studies of Dialkylglycine Decarboxylase, A Decarboxylating Transaminase, **222**, 873–875.

Transcription
Identification of *Cis* and *Trans*-elements Involved in the Timed Control of a *Caulobacter* Flagellar Gene, **217**, 247–257.
In Vivo Analysis of Overlapping Transcription Units in the *rplKAJLrpoBC* Ribosomal Protein–DNA Polymerase Gene Cluster of *Escherichia coli*, **218**, 23–31.
Structure and Inheritance of Sense and Anti-sense Transcripts from a Transposon in the Green Alga *Chlamydomonas reinhardtii*, **218**, 273–291.
Analysis of Polyomavirus Enhancer-Effect on DNA Replication and Early Gene Expression, **218**, 479–483.
A General Approach to the Isolation of Cell Cycle-regulated Genes in the Budding Yeast, *Saccharomyces cerevisiae*, **218**, 543–556.
Synthetic DNA Bending Sequences Increase the Rate of *in Vitro* Transcription Initiation at the *Escherichia coli lac* Promoter, **219**, 217–230.
Sigma Subunit of *Escherichia coli* RNA Polymersase Loses Contacts with the 3″ End of the Nascent RNA after Synthesis of a Tetranucleotide, **220**, 227–239.
Identification of DNA Sequences Involved in Regulating *Bacillus subtilis glnRA* Expression by the Nitrogen Source, **220**, 241–253.
Escherichia coli σ^{70} and NusA Proteins. I. Binding Interactions with Core RNA Polymerase in Solution and Within the Transcription Complex, **220**, 307–324.
Escherichia coli σ^{70} and NusA Proteins. II. Physical Properties and Self-association States, **220**, 325–333.
Escherichia coli Mutations That Block Transcription Termination by Phage HK022 Nun Protein, **220**, 613–619.
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. I. Characterization of Elongation Complexes, **221**, 1091–1110.
Studies on the Interaction of T7 RNA Polymerase with a DNA Template Containing a Site-specifically Placed Psoralen Cross-link. II. Stability and Some Properties of Elongation Complexes, **221**, 1111–1125.
Sporulation Operon *spoIVF* and the Characterization of Mutations that Uncouple Mother-cell from Forespore Gene Expression in *Bacillus subtilis*, **221**, 1237–1256.
Topoisomer Heterogeneity of Plasmid Chromatin in Living Cells, **222**, 133–137.

Transcription activation
Two MalT Binding Sites in Direct Repeat. A Structural Motif Involved in the Activation of All the Promoters of the Maltose Regulons in *Escherichia coli* and *Klebsiella pneumoniae*, **218**, 323–334.
Transcription Activation at a Distance by Phage $\phi 29$ Protein p4. Effect of Bent and Non-bent Intervening DNA Sequences, **219**, 403–414.
Factor-independent Activation of *Escherichia coli* rRNA Transcription. I. Kinetic Analysis of the Roles of the Upstream Activator Region and Supercoiling on Transcription of the *rrnB* P1 Promoter *in Vitro*, **220**, 555–568.
Factor-independent Activation of *Escherichia coli* rRNA Transcription. II. Characterization of Complexes of *rrnB* P1 Promoters Containing or Lacking the Upstream Activator Region with *Escherichia coli* RNA Polymerase, **220**, 569–583.

Transcription factor
Escherichia coli Transcription Factor That Both Activates Fatty Acid Synthesis and Represses Fatty Acid Degradation, **222**, 843–849.

Transcription factor 1
DNA-bending Properties of TF1, **221**, 777–794.

Transcription factors
RNA–Protein Interactions in a Nus A-containing *Escherichia coli* Transcription Complex Paused at an RNA Hairpin, **219**, 11–25.

Transcription initiation
Catabolite Activator Protein-induced DNA Bending in Transcription Initiation, **219**, 201–215.
Development of RNA Polymerase-Promoter Contacts during Open Complex Formation, **220**, 585–597.

Transcription termination
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interactions with RNA. I. Cryoelectron Microscopic Studies, **221**, 1127–1138.
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interactions with RNA. II. Physical Chemical Studies, **221**, 1139–1151.
Specificity of Antitermination Mechanisms. Suppression of the Terminator Cluster T1-T2 of *Escherichia coli* Ribosomal RNA operon, *rrnB*, by Phage λ Antiterminators, **222**, 59–66.

Transcription termination factor rho
Structure and Assembly of the *Escherichia coli* Transcription Termination Factor Rho and Its Interactions with RNA. II. Physical Chemical Studies, **221**, 1139–1151.

Transcription termination pause sites
An Apparent Pause Site in the Transcription Unit of the Rabbit α-Globin Gene, **220**, 255–270.

Transcriptional activator
EnvZ Controls the Concentration of Phosphorylated OmpR to Mediate Osmoregulation of the Porin Genes, **222**, 567–580.

Transesterification
Fate of the Junction Phosphate in Alternating Forward and Reverse Self-splicing Reactions of Group II Intron RNA, **222**, 145–154.

Transferase
Fate of the Junction Phosphate in Alternating Forward and Reverse Self-splicing Reactions of Group II Intron RNA, **222**, 145–154.

Transferred nuclear Overhauser effect
Interaction of Troponin I and Troponin C. Use of the Two-dimensional Nuclear Magnetic Resonance Transferred Nuclear Overhauser Effect to Determine the Structure of the Inhibitory Troponin I Peptide when Bound to Skeletal Troponin C, **222**, 405–421.

Transferrin
Crystallization and X-ray Diffraction Studies of a Soluble Form of Human Transferrin Receptor, **218**, 685–689.

Transition of a limit degree of binding
Nature of Protamine–DNA Complexes. A Special Type of Ligand Binding Co-operativity, **222**, 423–433.

Transition state
Lysine 335, Part of the KMSKS Signature Sequence, Plays a Crucial Role in the Amino Acid Activation Catalysed by the Methionyl-tRNA Synthetase from *Escherichia coli*, **217**, 465–475.

Translation
The Signal for a Leaky UAG Stop Codon in Several Plant Viruses Includes the Two Downstream Codons, **218**, 365–373.
tRNA Anticodons with the Modified Nucleoside 2-Methylthio-N^6-(4-hydroxyisopentenyl)adenosine Distinguish Between Bases 3′ of the Codon, **218**, 509–516.
Bacterial Expression of Rat Liver Succinyl-CoA Synthetase α-Subunit, **219**, 165–174.

Translation control
Functional and Structural Elements of the mRNA of the *cIII* Gene of Bacteriophage Lambda, **218**, 723–733.

Translation efficiency
An Apparent Rare-codon Effect on the Rate of Translation of a *Neurospora* Gene, **221**, 733–736.

Translation initiation
Influence of mRNA Determinants on Translation Initiation in *Escherichia coli*, **218**, 83–97.
Detection of *Escherichia coli* Ribosome Binding at Translation Initiation Sites in the Absence of tRNA, **218**, 99–105.
Translation Initiation of IS*50*R Read-through Transcripts, **221**, 65–80.

Translation rate
Absolute *in Vivo* Translation Rates of Individual Codons in *Escherichia coli*. The Two Glutamic Acid Codons GAA and GAG Are Translated with a Threefold Difference in Rate, **222**, 265–280.

Translational down-regulation
Regulation of Histone $H1^0$ Accumulation During Induced Differentiation of Murine Erythroleukemia Cells, **217**, 85–92.

Translational efficiency
Effects of the Nucleotide 3′ to an Amber Codon on Ribosomal Selection Rates of Suppressor tRNA and Release Factor-1, **219**, 231–241.

Translational frameshifting
Programmed Translational Frameshifting and Initiation at an AUU Codon in Gene Expression of Bacterial Insertion Sequence IS*911*, **222**, 465–477.

Translational initiation factor 2
A Severely Truncated Form of Translational Initiation Factor 2 Supports Growth of *Escherichia coli*, **220**, 335–349.

Translational rate
Effects of the Nucleotide 3′ to an Amber Codon on Ribosomal Selection Rates of Suppressor tRNA and Release Factor-1, **219**, 231–241.

Translational regulation
Mutational Analysis of the RNA Pseudoknot Component of a Coronavirus Ribosomal Frameshifting Signal, **220**, 889–902.

Translocation
Incipient Mitochondrial Evolution in Yeasts. I. The Physical Map and Gene Order of *Saccharomyces douglasii* Mitochondrial DNA Discloses a Translocation of a Segment of 15,000 Base-pairs and the Presence of New Introns in Comparison with *Saccharomyces cerevisiae*, **218**, 735–746.

Transmembrane
Crystallization and Preliminary X-ray Diffraction Study of the Ligand-binding Domain of the Bacterial Chemotaxis-mediating Aspartate Receptor of *Salmonella typhimurium*, **221**, 31–34.

Transmembrane helix
Proline Kinks in Transmembrane α-Helices, **218**, 499–503.
Supercoiling is Essential for the Formation and Stability of the Initiation Complex at the Divergent *malEp* and *malKp* Promoters, **218**, 529–542.

Transport
Molecular and Functional Characterization of a Carbon Starvation Gene of *Escherichia coli*, **218**, 129–140.

Transposase
Two Mutations of Phage Mu Transposase that Affect Strand Transfer or Interactions with B Protein Lie in Distinct Polypeptide Domains, **219**, 189–199.

Transposition
Translation Initiation of IS*50*R Read-through Transcripts, **221**, 65–80.
Programmed Translational Frameshifting and Initiation at an AUU Codon in Gene Expression of Bacterial Insertion Sequence IS*911*, **222**, 465–477.

Transposon
Structure and Inheritance of Sense and Anti-sense Transcripts from a Transposon in the Green Alga *Chlamydomonas reinhardtii*, **218**, 273–291.
Mutations in the Inverted Repeats of Tn*3* Affect Binding of Transposase and Transposition Immunity, **218**, 335–347.

***traY* promoter**
Regulation of the F Plasmid *traY* Promoter in *Escherichia coli* K12 as a Function of Sequence Context, **220**, 271–279.

Triosephosphate isomerase
Refined 1·83 Å Structure of Trypanosomal Triosephosphate Isomerase Crystallized in the Presence of 2·4 M-Ammonium Sulphate. A Comparison with the Structure of the Trypanosomal Triosephosphate Isomerase-Glycerol-3-phosphate Complex, **220**, 995–1015.

Tri-phase partitioning
Preparation of Human Manganese Superoxide Dismutase by Tri-phase Partitioning and Preliminary Crystallographic Data, **219**, 103–108.

Triple helices
Nuclear Magnetic Resonance Structural Studies of Intramolecular Purine·Purine·Pyrimidine DNA Triplexes in Solution. Base Triple Pairing Alignments and Strand Direction, **221**, 1403–1418.

tRNA
Identifying Potential tRNA Genes in Genomic DNA Sequences, **220**, 659–671.

tRNA discrimination
Binding of the Anticodon Domain of $tRNA_1^{Met}$ to *Escherichia coli* Methionyl-tRNA Synthetase, **220**, 205–208.

tRNA gene
A Large Number of tRNA Genes are Symmetrically Located in Fission Yeast Centromeres, **218**, 13–17.

tRNA genes
Informational Redundancy of $tRNA_4^{Ser}$ and $tRNA_7^{Ser}$ Genes in *Drosophila melanogaster* and Evidence for Intergenic Recombination, **219**, 175–188.
Transfer RNA Genes from *Dictyostelium discoideum* are Frequently Associated with Repetitive Elements and Contain Consensus Boxes in their 5′-and 3′-Flanking Regions, **222**, 537–552.

tRNA modification
tRNA Anticodons with the Modified Nucleoside 2-Methylthio-N^6-(4-hydroxyisopentenyl)adenosine Distinguish Between Bases 3′ of the Codon, **218**, 509–516.

tRNA modifications
ms^2i^6 A Deficiency Enhances Proofreading in Translation, **222**, 1161–1171.

tRNA processing
Sequence Changes in Both Flanking Sequences of a Pre-tRNA Influence the Cleavage Specificity of RNase P, **217**, 637–648.

$tRNA^{Glu}$
Characterization of a Tandemly Repeated DNA Sequence Family Originally Derived by Retroposition of $tRNA^{Glu}$ in the Newt, **222**, 391–404.

$tRNA_f^{Met}$
Binding of the Anticodon Domain of $tRNA_f^{Met}$ to *Escherichia coli* Methionyl-tRNA Synthetase, **220**, 205–208.

Troponin C
Interaction of Troponin I and Troponin C. Use of the Two-dimensional Nuclear Magnetic Resonance Transferred Nuclear Overhauser Effect to Determine the Structure of the Inhibitory Troponin I Peptide when Bound to Skeletal Troponin C, **222**, 405–421.

Troponin I
Interaction of Troponin I and Troponin C. Use of the Two-dimensional Nuclear Magnetic Resonance Transferred Nuclear Overhauser Effect to Determine the Structure of the Inhibitory Troponin I Peptide when Bound to Skeletal Troponin C, **222**, 405–421.

Trp repressor
Shared Operator Recognition Specificity between Trp Repressor and the Repressors of Bacteriophage 434, **217**, 599–602.

Trypanosoma brucei
Variant Specific Glycoprotein of *Trypanosoma brucei* Consists of Two Domains each Having an Independently Conserved Pattern of Cysteine Residues, **221**, 823–835.

Trypanosome
Crystallization and Preliminary X-ray Analysis of an Intact Soluble-form Variant Surface Glycoprotein from the African Trypanosome, *Trypanosoma brucei*, **218**, 679–683.

Trypsin
Crystal Structure of Rat Trypsin-S195C at −150°C. Analysis of Low Activity of Recombinant and Semisynthetic Thiol Proteases, **219**, 511–523.
Crystallographic Analysis of Trypsin-G226A. A Specificity Pocket Mutant of Rat Trypsin with Altered Binding and Catalysis, **219**, 525–532.
Preliminary X-ray Investigation of a Bifunctional Inhibitor from Indian Finger Millet (Ragi), **222**, 1–2.

Trypsin inhibitor
Crystal Structure of a Kunitz-type Trypsin Inhibitor from *Erythrina caffra* Seeds, **217**, 153–176.

Two-dimensional agarose gel electrophoresis
Unidirectional Replication as Visualized by Two-dimensional Agarose Gel Electrophoresis, **220**, 843–853.

Type I aldolase
Activity and Specificity of Human Aldolases, **219**, 573–576.

U1 small nuclear ribonucleoprotein
Conserved Amino Acid Residues Within and Outside of the N-terminal Ribonucleoprotein Motif of U1A Small Nuclear Ribonucleoprotein Involved in U1 RNA Binding, **219**, 577–584.

U1 snRNPs
Influences of Separation and Adjacent Sequences on the Use of Alternative 5′ Splice Sites, **217**, 265–281.

U1A protein
Conserved Amino Acid Residues Within and Outside of the N-terminal Ribonucleoprotein Motif of U1A Small Nuclear Ribonucleoprotein Involved in U1 RNA Binding, **219**, 577–584.

U2″ protein
Conserved Amino Acid Residues Within and Outside of the N-terminal Ribonucleoprotein Motif of U1A Small Nuclear Ribonucleoprotein Involved in U1 RNA Binding, **219**, 577–584.

Ubiquitin conjugation
Stable Ester Conjugate between the *Saccharomyces cerevisiae* RAD6 Protein and Ubiquitin Has no Biological Activity, **221**, 745–749.

Ubiquitous CCAAT factor NFY
NFY or a Related CCAAT Binding Factor Can Be Replaced by Other Transcriptional Activators for Cooperation with HNF1 in Driving the Rat Albumin Promoter *in Vivo*, **222**, 31–43.

Ultraviolet light
Mutation Spectrum Following Transfection of Ultraviolet-irradiated Single-stranded or Double-stranded Shuttle Vector DNA into Monkey Cells, **218**, 667–673.

Unassigned codon
Novel Anticodon Composition of Transfer RNAs in *Micrococcus luteus*, a Bacterium with a High Genomic G + C Content. Correlation with Codon Usage, **221**, 387–401.

Urinary proteins
Crystallization of and Preliminary X-ray Data for the Mouse Major Urinary Protein and Rat α-2u Globulin, **218**, 699–701.

UVR
Repair of Helix-stabilizing Anthramycin–N2 Guanine DNA Adducts by UVRA and UVRB Proteins, **220**, 855–866.

UvrABC nuclease
Initiation of the UvrABC Nuclease Cleavage Reaction. Efficiency of Incision is not Correlated with UvrA Binding Affinity, **220**, 19–33.

Venom
Preliminary Crystallographic Analysis of Cardiotoxin V with Major Fusion Activity from Taiwan Cobra (*Naja naja atra*) Venom, **219**, 591–597.

Verotoxin-1
Crystallization and Preliminary X-ray Crystallographic Analysis of Verotoxin-1 B-subunit, **221**, 729–731.

Virus
Conformation and Mobility of the RNA-binding N-Terminal Part of the Intact Coat Protein of Cowpea Chlorotic Mottle Virus. A Two-dimensional Proton Nuclear Magnetic Resonance Study, **220**, 701–709.

Virus assembly
The Last Duplex Base-pair of the Phage λ Chromosome. Involvement in Packaging, Ejection and Routing of λ DNA, **220**, 293–306.
Interactions between Viral Coat Protein and a Specific Binding Region on Turnip Crinkle Virus RNA, **222**, 437–443.

Virus entry
X-ray Solution Scattering of Sindbis Virus. Changes in Conformation Induced at Low pH, **221**, 39–42.

Virus mutants
Analysis of Polyomavirus Enhancer-Effect on DNA Replication and Early Gene Expression, **218**, 479–483.

Virus satellite RNAs
On the Nature of Spontaneous RNA Synthesis by Qβ Replicase, **222**, 3–9.

Virus structure
The Observed Form of Coated Vesicles and a Mathematical Covering Problem, **218**, 485–488.

Neutron Diffraction Studies of the Structure of Filamentous Bacteriophage Pf1. Demonstration that the Coat Protein Consists of a Pair of α-Helices with an Intervening, Non-helical Surface Loop, **220**, 359–379.

Virus uncoating

Generation of Infectious Nucleocapsids by *in Vitro* Assembly of the Shell Protein on to the Polymerase Complex of the dsRNA Bacteriophage $\phi 6$, **218**, 569–581.

Vitamin B_6

Crystallization and Preliminary X-ray Diffraction Studies of Dialkylglycine Decarboxylase, A Decarboxylating Transaminase, **222**, 873–875.

Vitamin D-binding (protein)

Crystallization and Preliminary X-ray Analysis of Gc, the Vitamin D-binding Protein in Serum, **220**, 545–547.

Voltage-sensitive channels

Individual Domains of Colicins Confer Specificity in Colicin Uptake, in Pore-properties and in Immunity Requirement, **217**, 429–439.

Volume changes

Mapping Electrostatic Interactions in Macromolecular Associations, **221**, 1453–1460.

VSG

Crystallization and Preliminary X-ray Analysis of an Intact Soluble-form Variant Surface Glycoprotein from the African Trypanosome, *Trypanosoma brucei*, **218**, 679–683.

VSG, sequence comparison

Variant Specific Glycoprotein of *Trypanosoma brucei* Consists of Two Domains each Having an Independently Conserved Pattern of Cysteine Residues, **221**, 823–835.

Water/protein interaction

β-Lactamase of *Bacillus licheniformis* 749/C. Refinement at 2 Å Resolution and Analysis of Hydration, **220**, 435–455.

Weissenberg photograph

Crystallization and Preliminary X-ray Study of a Double-Shelled Spherical Virus, Rice Dwarf Virus, **219**, 665–669.

Wheat histone H2A

Extended C-Terminal Tail of Wheat Histone H2A Interacts with DNA of the "Linker" Region, **218**, 805–813.

Wormlike model

Computer Simulation of DNA Supercoiling, **217**, 413–419.

Xenopus laevis

Structural Studies on Site-directed Mutants of Domain 3 of *Xenopus laevis* Oocyte 5 S Ribosomal RNA, **219**, 243–255.

Identification and Functional Analysis of the Nuclear Localization Signals of Ribosomal Protein L25 from *Saccharomyces cerevisiae*, **221**, 225–237.

X-ray

Crystallization and Preliminary X-ray Analysis of an Intact Soluble-form Variant Surface Glycoprotein from the African Trypanosome, *Trypanosoma brucei*, **218**, 679–683.

Location of Ion-binding Sites in the Gramicidin Channel by X-ray Diffraction, **218**, 847–858.

Crystallographic Analysis of Trypsin-G226A. A Specificity Pocket Mutant of Rat Trypsin with Altered Binding and Catalysis, **219**, 525–532.

Characterization of Crystals of An Fab Fragment of a Murine Monoclonal Antibody, **222**, 445–446.

X-ray analysis

Crystallization and Preliminary X-ray Analysis of Phenylalanine Hydroxylase from Rat Liver, **218**, 495–498.

Crystallization of the B Chain of Shiga-like Toxin I from *Escherichia coli*, **218**, 691–694.

Crystals of Protein S6 from the 30 S Ribosomal Subunit of *Thermus thermophilus*, **220**, 549–550.

Three-dimensional Structure of a Highly Thermostable Enzyme, 3-Isopropylmalate Dehydrogenase of *Thermus thermophilus* at 2·2 Å Resolution, **222**, 725–738.

Crystallization and Preliminary X-ray Analysis of the Lactose-specific Phosphocarrier Protein IIA^{lac} of the Phosphoenolpyruvate : Sugar Phosphotransferase System from *Staphylococcus aureus*, **222**, 857–859.

Crystallization and Preliminary X-ray Analysis of Botulinum Neurotoxin Type A, **222**, 877 880.

X-ray crystal structure

Crystal Structure of a Kunitz-type Trypsin Inhibitor from *Erythrina caffra* Seeds, **217**, 153–176.

X-ray Crystal Structure of the Ferric Sperm Whale Myoglobin : Imidazole Complex at 2·0 Å Resolution, **217**, 409–412.

X-ray crystallography

Crystallization and Preliminary Analysis of Telokin, the C-Terminal Domain of Myosin Light Chain Kinase, **217**, 621–623.

Preliminary Crystallographic Study of a Pseudoazurin from Methylotrophic Bacterium, *Methylobacterium extorquens* AM1, **218**, 19–20.

Trigonal Crystals of Porin from *Escherichia coli*, **218**, 505 507.

Crystallization of the Hybrid *Bacillus* (1-3,1-4)-β-Glucanase H(A16-M), **218**, 703–704.

The Phage 434 Cro/O_R1 Complex at 2·5 Å Resolution, **219**, 321–334.

X-ray Analysis of a Single Chain B29–A1 Peptide-linked Insulin Molecule. A Completely Inactive Analogue, **220**, 425 433.

Refined X-ray Crystal Structures of the Reactive Site Modified Ovomucoid Inhibitor Third Domains from Silver Pheasant (OMSVP3*) and from Japanese Quail (OMJPQ3*), **220**, 739–755.

Crystals of Intact Elongation Factor Tu from *Thermus thermophilus* Diffracting to High Resolution, **221**, 375–377.

Fibrinogen Structure in Projection at 18 Å Resolution. Electron Density by Co-ordinated Cryo-electron Microscopy and X-ray Crystallography, **222**, 89–98.

Crystallization and Preliminary Data for the Ferric Form of *Lucina pectinata* Hemoglobin I, **222**, 447–449.

Crystallization and Preliminary X-ray Diffraction Studies of the Spinach-chloroplast Thioredoxin f, **222**, 459–461.

Crystallization and Preliminary X-ray Diffraction Studies of Dialkylglycine Decarboxylase, A Decarboxylating Transaminase, **222**, 873–875.

Crystallization and Preliminary X-ray Analysis of Phosphoporin from the Outer Membrane of *Escherichia coli*, **222**, 881 884.

X-ray diffraction

Crystals of an Integral Membrane Protein Diffracting to 1·8 Å Resolution, **217**, 9–10.

Crystallization and Preliminary X-ray Diffraction Studies of a MATα2–DNA Complex, **217**, 11–13.

Crystallization of Complexes of *Eco*RV Endonuclease with Cognate and Non-cognate DNA Fragments, **217**, 235 238.

Preparing Well-oriented Sols of Straight Bacterial Flagellar Filaments for X-ray Fiber Diffraction, **217**, 293 302.

Crystallization and Preliminary X-ray Study of a Double-Shelled Spherical Virus, Rice Dwarf Virus, **219**, 665–669.

Crystallization and Preliminary X-ray Analysis of Gc, the Vitamin D-binding Protein in Serum, **220**, 545–547.

Molecular Structure of Cytochrome c_2 Isolated from *Rhodobacter capsulatus* Determined at 2·5 Å Resolution, **220**, 673–685.

Low-resolution Structure of Recombinant Human Granulocyte–Macrophage Colony Stimulating Factor, **221**, 55 60.

Preliminary X-ray Diffraction Analysis of a Crystallizable Mutant of Malate Dehydrogenase from the Thermophile *Thermus flavus*, **221**, 383–385.
Biochemical Implications from the Variable Gene Sequences of an Anti-cytochrome *c* Antibody and Crystallographic Characterization of its Antigen-binding Fragment in Free and Antigen-complexed Forms, **221**, 455–462.
Molecular Structure of a Complete Turn of *A*-DNA, **221**, 623–635.
Crystallization and Crystal Packing of *Proteus mirabilis* PR Catalase, **221**, 1075–1077.
Preliminary X-ray Investigation of a Bifunctional Inhibitor from Indian Finger Millet (Ragi), **222**, 1–2.
Characterization of Crystals of an Intact Monoclonal Antibody for Canine Lymphoma, **222**, 17–19.
Preliminary Investigation of Crystals of the Neutral Lipase from *Pseudomonas fluorescens*, **222**, 21–22.
Crystallization of Diphtheria Toxin, **222**, 861–864.

X-ray fibre diffraction
Analysis of Structural Design Features in Collagen, **218**, 209–219.

X-ray pattern
Molecular Packing in Type I Collagen Fibrils. A Model with Neighbouring Collagen Molecules Aligned in Axial Register, **218**, 815–823.

X-ray scattering
X-ray Solution Scattering of Sindbis Virus. Changes in Conformation Induced at Low pH, **221**, 39–42.

X-ray structure
The Refined Structure of the Complex between Adenylate Kinase from Beef Heart Mitochondrial Matrix and its Substrate AMP at 1·85 Å Resolution, **217**, 541–549.
Comparison of the Solution Nuclear Magnetic Resonance and Crystal Structures of Interleukin-8. Possible Implications for the Mechanism of Receptor Binding, **217**, 611–620.
Structure of Cyclodextrin Glycosyltransferase Refined at 2·0 Å Resolution, **217**, 737–750.
Crystal Structure of a Barnase–d(GpC) Complex at 1·9 Å Resolution, **219**, 123–132.
Three-dimensional Structure of the Complexes between Bovine Chymotrypsinogen A and Two Recombinant Variants of Human Pancreatic Secretory Trypsin Inhibitor (Kazal-type), **220**, 711–722.
Comparison of the Solution Nuclear Magnetic Resonance and X-ray Crystal Structures of Human Recombinant Interleukin-1β, **221**, 47–53.
X-ray Analyses of Aspartic Proteinases IV. Structure and Refinement at 2·2 Å Resolution of Bovine Chymosin, **221**, 1295–1309.
Structure of NADH Peroxidase from *Streptococcus faecalis* 10C1 Refined at 2·16 Å Resolution, **221**, 1325–1344.

Yeast
Crystallization and Preliminary X-ray Diffraction Studies of a MATα2–DNA Complex, **217**, 11–13.
Higher-order Structure of the 5·8 S rRNA Sequence within the Yeast 35 S Precursor Ribosomal RNA Synthesized *in Vitro*, **217**, 649–659.
rRNA Binding Domain of Yeast Ribosomal Protein L25. Identification of its Borders and a Key Leucine Residue, **218**, 375–385.
A General Approach to the Isolation of Cell Cycle-regulated Genes in the Budding Yeast, *Saccharomyces cerevisiae*, **218**, 543–556.
Incipient Mitochondrial Evolution in Yeasts. I. The Physical Map and Gene Order of *Saccharomyces douglasii* Mitochondrial DNA Discloses a Translocation of a Segment of 15,000 Base-pairs and the Presence of New Introns in Comparison with *Saccharomyces cerevisiae*, **218**, 735–746.
Incipient Mitochondrial Evolution in Yeasts. II. The Complete Sequence of the Gene Coding for Cytochrome *b* in *Saccharomyces douglasii* Reveals the Presence of Both New and Conserved Introns and Disclosed Major Differences in the Fixation of Mutations in Evolution, **218**, 747–760.
Identification and Functional Analysis of the Nuclear Localization Signals of Ribosomal Protein L25 from *Saccharomyces cerevisiae*, **221**, 225–237.
Stable Ester Conjugate between the *Saccharomyces cerevisiae* RAD6 Protein and Ubiquitin Has no Biological Activity, **221**, 745–749.

Yeast mitochondria
Structure and Evolution of a Group of Related Aminoacyl-tRNA Synthetases, **218**, 557–568.
Fate of the Junction Phosphate in Alternating Forward and Reverse Self-splicing Reactions of Group II Intron RNA, **222**, 145–154.
Restoration of the Self-splicing Activity of a Defective Group II Intron by a Small *Trans*-acting RNA, **222**, 179–187.

Zymogen structure
Refined Structure of Porcine Pepsinogen at 1·8 Å Resolution, **219**, 671–692.
